1. GENERAL

This section covers the wiring of 14-type transmitter-distributors. The diagrams show the wiring of the machines as they are received from the factory.

2. WIRING DIAGRAMS

1.02 This section is reissued to include Figures 12, 13, and show a change in Figure 1.

1.03 The wiring shown in Figures 1, 2, and 3 for transmitter-distributors which are used at teletypewriter stations, covers the ac clutch magnet which is adapted for use on either ac- or dc-power supply.

1.04 Figures 4 and 5 cover the wiring of test message transmitter-distributors which are used in connection with central office apparatus.

1.05 Figure 6 shows the type of transmitter-distributor which is used at the switching center of an 81-type system. Figures 7 and 8 are types of transmitter-distributors which are used at an outlying station of an 81-type system.

1.06 Figures 9, 10, and 11 show the transmitter-distributors used with the 131 teletypewriter subscriber set.

1.07 Figure 12 shows the transmitter-distributors used with the 83BI system. The 14BH unit is used for 60 wpm and the 14BJ for 75 wpm operation.

1.08 Figure 13 shows the transmitter-distributor used with the Teletypewriter Automatic Dispatch System (TADS).

1.09 Some of the earlier sets were shipped with a strap across the 350-ohm portion of the resistor in series with the start magnet. This strap should be removed when the start magnet is operated on dc power, otherwise, the 175-ohm resistor will severely overheat. The 350-ohm resistor should be strapped out when the ac start magnet is operated on ac power.
