Reference is made in the above parts bulletins to the 77911 and 70873 brush holder caps. These two parts originally differed in that one (77911) had a tapped hole for a #6-32 screw to secure the filter lead, and the other (70873) did not. The 70873 has recently been changed to include the tapped hole, thus making the two parts identical. The 77911 brush holder cap has been cancelled and on orders for such part the 70873 brush holder cap will be furnished.
