### 1. GENERAL

1.01 This section has been revised to include recent engineering changes, to add late 35 type equipment, and to rearrange the text. Changes and additions are indicated by arrows placed in the outside margins.

1.02 The adjustments of each unit are arranged in a sequence that should be followed if a complete readjustment of the unit were undertaken. The tools and spring scales required to perform these adjustments are listed in the applicable section. After an adjustment is completed, be sure to tighten any nuts or screws that are loosened. The adjusting illustrations indicate tolerances, positions of moving parts, spring tensions and the angles at which scales should be applied when measuring spring tensions. If a part that is mounted on shims is removed, the number of shims used at each of its mounting screws should be noted so that the same number is replaced when the part is remounted.

1.03 The spring tensions given in this bulletin are indicated values and should be checked with proper spring scales in the positions indicated.

1.04 References made to left or right, up or down, front or rear etc. apply to the unit in its normal operating position as viewed from the front.

1.05 When a requirement calls for a clutch to be disengaged, the clutch shoe lever must be fully latched between its trip lever and latch lever so that the clutch shoes (2.13) release their tension on the clutch drum. When engaged, the clutch shoe lever is unlatched and the clutch shoes are wedged firmly against the clutch drum.

1.06 All electrical contact points should meet squarely. Contacts with the same diameter should not be out of alignment more than 25 per cent of the contact diameter. Check contacts for pitting and corrosion and clean or buff them before making specified adjustment or tolerance measurement. Avoid sharp kinks or bends in the contact springs.

**NOTE:** KEEP ALL ELECTRICAL CONTACTS FREE OF OIL AND GREASE.

SIGNALLING CODE CONTACT (STROBING)

PROCEDURE
(1) DISCONNECT ARC SUPPRESSOR OR RF FILTER. RE-CONNECT SIGNAL GENERATOR CONTACTS SO CURRENT TO STROBOSCOPE LAMP OF DXD TEST SET IS INTERRUPTED. SYNCHRONIZE SIGNAL GENERATOR WITH DXD SO END OF STOP PULSE IMAGE IS IN LINE WITH "O" MARK OR START PULSE ON DXD SCALE WHEN TRANSMISSION IS CONTINUOUS AND BOTH UNITS ARE OPERATING AT 100 WPM (600 RPM).

NOTE: IF END OF STOP PULSE VARIES, ADJUST THE SCALE SO THE VARIATION EXTENDS EQUALLY TO EITHER SIDE OF "O" MARK OF START PULSE ON SCALE. NUMBERS IN () ARE FOR UNITS USING TIMING CONTACTS.

(2) NOMINAL LENGTH OF INTELLIGENCE PULSES IS 100 DIVISIONS. IF ADJUSTMENT TO FEELER GAUGES DOES NOT PERMIT PULSE LENGTHS WITHIN TOLERANCE, REFINE CONTACT BOX ADJUSTMENT. FAVOR INTELLIGENCE PULSES BY USING UP TO + 8 DIVISIONS TOLERANCE ON BEGINNING OF STOP PULSE, SO EACH IS NEAR AS POSSIBLE TO 100 DIVISIONS IN LENGTH.

REQUIREMENT
(1) EACH MARKING CODE PULSE TO BEGIN NOT LATER THAN 8 (12) MARK AND NO EARLIER THAN 92 (88) MARK OF PREVIOUS PULSE.
(2) EACH MARKING CODE PULSE TO END NOT EARLIER THAN 92 (88) MARK OR LATER THAN 8 (12) MARK IN PULSE FOLLOWING ONE BEING OBSERVED.
(3) MARKING CODE PULSES MAY HAVE BREAK NOT MORE THAN 3 DIVISIONS WIDE AND OCCURS ONLY AT END OF CODE PULSE IMAGE BETWEEN THE 92 (88) MARK AND END OF IMAGE.
(4) STOP IMAGE SHOULD NOT CHANGE IN LENGTH OR POSITION MORE THAN 1 DIVISION WHILE CHANGING FROM R TO Y SELECTION (OR EQUIVALENT PERMUTATIONS FOR OTHER CODES).

NOTE: IF NECESSARY, REPOSITION STABILIZER MECHANISM SO END OF STOP IMAGE COINCIDES WITH "O" MARK OF START PULSE ON SCALE. (DO NOT REMOVE SCALE.)
