TECHNICAL MANUAL
33 TELETYPewriter SETS
KEYBOARD SEND-RECEIVE (KSR)
RECEIVE-ONLY (RO)
AUTOMATIC SEND-RECEIVE (ASR)

TELETYPE®
CORPORATION
5555 Touhy Avenue, Skokie, Illinois

SEE INDIVIDUAL SECTIONS FOR COPYRIGHT NOTICES.
PRINTED IN U.S.A.
INTRODUCTION

Bulletin 310B is a technical manual that provides general and specific information about the 33 Keyboard Send-Receive (KSR), Receive-Only (RO), and Automatic Send-Receive (ASR) Teletypewriter Sets and their component units. It consists of two volumes.

Volume 1 contains a description of the 33 Teletypewriter Sets and gives installation instructions. Also included in Volume 1 is information on the disassembly and reassembly, lubrication, and principles of operation of the component units of the Teletypewriter Sets. Volume 2 includes adjustment information on all component units of 33 Teletypewriter Sets.

Each volume is made up of a group of appropriate independent sections. Each independent section is complete within itself—it is separately identified by a title and section number, and the pages are numbered consecutively.

Each individual section is identified by a 9-digit section number which appears at the top of each page of a section. The section number appears on the left corner of left-hand pages and on the right corner of right-hand pages. In addition, the section number on each page contains the suffix TC which identifies it as a Teletype Corporation section. All sections are placed in the technical manual in ascending numerical order.

To locate specific information, refer to the table of contents on the following page. In the first column, under "Equipment," find the name of the component unit or set in question. Move across the page to the second column and locate the title being sought. The applicable 9-digit section number can then be found in the third column. Turn to Page 1 of the applicable section, and the contents of that section will be found.

### 1. GENERAL

1.01 This section provides adjustment information for 33 keyboards which are mechanically reset by an H-plate and the distributor trip linkage shown in 2.14. It is reissued to include information only on 33 keyboards. Also, this issue updates information and adds new information on the auxiliary contact mechanism used on parity keyboards and keylever springs used on numeric-type keyboards. Since this is a general revision, marginal arrows ordinarily used to indicate changes and additions are omitted.

Note: Adjustment information for solenoid-reset keyboards is found in another section.

1.02 In the adjustments covered in this section, location of clearances, position of parts, and point and angle of scale applications are illustrated by line drawings. Requirements and procedures are set forth in the several texts that accompany the line drawings. Tools necessary to maintain 33 Teletypewriter Sets are shown in Maintenance Tools Section 570-005-800TC.

1.03 The sequence in which the adjustments appear is that which should be followed when a complete readjustment of the keyboard is undertaken. No single adjustment should be undertaken without first completely understanding the procedure and knowing the requirements. Therefore, read a procedure all the way through before making an adjustment or checking a spring tension.

Note: Disconnect the keyboard from any voltage source prior to inspection, minor repair, extensive maintenance, or a complete readjustment.

1.04 References to left, right, front, rear, etc consider the keyboard to be viewed from a position where the spacebar (Figure 3) faces up and the contact mechanism is located to the viewer's right.

1.05 When a procedure calls for using pry points or slots to make an adjustment, place a screwdriver between the points or in the slots and pry parts in the proper direction.

1.06 When the keyboard is removed from the subbase to facilitate the making of an adjustment and subsequently replaced, recheck any adjustments that may have been affected. Also, if parts are removed from the keyboard to facilitate the making of an adjustment, be sure that they are subsequently replaced. Recheck any adjustment that may have been affected by the removal of parts.

1.07 Related adjustments are listed with some of the adjustment texts and are primarily intended to aid in troubleshooting the equipment. As an example, suppose that in searching for a trouble it is discovered that Part (2) of CONTACT WIRES adjustment does not meet its requirement. Under Related Adjustment it is indicated that Part (2) of this adjustment is affected by Part (1). Check Part (1) to see if it is the basic
cause of the trouble. Also, note that certain adjustments affect other adjustments. For example, see the DISTRIBUTOR TRIP LINKAGE adjustment. Note that this adjustment affects the TRIP LEVER ENGAGEMENT adjustment. (See the appropriate typing unit section.) If the former adjustment is changed, check the latter adjustment.

1.08 The spring tensions specified in this section are indications, not exact values. Therefore, to obtain reliable readings, it is important that spring tensions be measured by spring scales placed in the positions shown on pertinent line drawings. Springs that do not meet their requirements should be replaced by new ones. Only those springs that directly affect the operation of the keyboard are measured, however, others may be measured indirectly in the process. If, at first, the spring tension requirement cannot be met, replace the indicated spring being directly measured. Then, if the requirement is not met, any springs that are indirectly measured in the procedure should be replaced, one at a time, with the performance of requirement checks each time a spring is replaced.

Note 1: Use only spring scales which are recommended by the manufacturer. These spring scales are listed in Maintenance Tools Section 570-005-800TC.

Note 2: The spring tensions may be checked in any sequence.
1.09 With the keyboard and typing unit assembled together on the subbase, adjustment procedures may specify that the typing unit be placed in the stop condition. It is in the stop condition when the selector armature is in its attracted (frontward) position and all clutches are disengaged. Furthermore, when the typing unit is in the stop condition the keyboard will be latched — universal lever down and blocked from upward movement by an associated latch-lever.

Note: The keyboard is tripped when the universal lever is in its up position.

1.10 To place the typing unit in the stop condition, hold the selector armature in its attracted (frontward) position. Manually rotate the main shaft clockwise (as viewed from the left) until all clutches are in a stop position. Fully disengage all of the clutches by positioning a screwdriver to the associated stop-lug. Push the clutch disc in the normal direction of main shaft rotation until the corresponding latches seats in its clutch disc notch. This permits the clutch shoes to release their tensions on the clutch drum. With all clutches disengaged, the main shaft will turn freely without any dragging of the clutch shoes.
Figure 3 - Keyboard (Cover Removed)

Note 1: A stop position is that position where a shoe lever contacts a trip lever.

Note 2: The distributor clutch will not disengage unless the keyboard is latched and the answer-back drum is in its home position. The answer-back home position is the position where the control lever is fully detented into the indent on the answer-back drum.

1.11 A clutch is tripped by moving a trip lever up and away from contact with a shoe lever. When moved up, a trip lever no longer holds a shoe lever in its stop position. When the clutch is tripped, the shoe lever and a stop-lug on the clutch disc move apart, and the clutch becomes engaged. The clutch shoes wedge against the drum so that when the shaft is turned the clutch assembly will turn in unison with it.

1.12 General Maintenance Principles

(a) Lubrication instructions and intervals are given in the appropriate lubrication sections.

(b) To maintain the operational effectiveness of the equipment, it is recommended that certain parts be replaced at intervals based upon the speed and operating hours, as indicated below:

<table>
<thead>
<tr>
<th>Operating Speed (Words per Minute)</th>
<th>Recommended Overhaul Interval (Hours*)</th>
<th>Estimated Service Life (Hours*)</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>1500</td>
<td>4500</td>
</tr>
</tbody>
</table>

*Typing unit operating hours

Replacement parts are available in overhaul kits.
2. BASIC UNIT

2.01 Universal Link

Note: Remove keyboard and call control unit from subbase to facilitate the making of the following adjustments. For disassembly instructions, see the appropriate keyboard section.

UNIVERSAL LINK

To Check
Push universal lever down until latched by latchlever.

Requirement
Min 0.089 inch---Max 0.103 inch between universal link and frame.

To Adjust
Place screwdriver through opening in front of frame and bend tab.
2.02 Contact Wires

CONTACT WIRES

Note: Part (1) of this adjustment applies to contact wires actuated by the reset bail. Part (2) applies to contact wires which have two camming surfaces and are operated by a T-lever and the reset bail.

(1) To Check
Push universal lever down until latched by latchlever. Place T-levers down in marking position. As each contact wire is checked, take up its play in a upward direction.

Requirement
Min 0.012 inch --- Max 0.027 inch between terminal and each contact wire.

To Adjust
Bend contact wire with TP185829 bending tool as shown.

(Front View)

(2) To Check
Push universal lever down until latched by latchlever. Place T-levers up in spacing position. Trip keyboard by depressing universal codebar. As each contact wire is checked, take up its play in an upward direction.

Requirement
Min 0.020 inch --- Max 0.040 inch between terminal and each contact wire.

To Adjust
Bend contact wire with TP185829 bending tool as shown.

Related Adjustment
Affected by
Part (2) of this adjustment is affected by Part (1).

(Front View)
2.03 Contact Wires (continued)

LEFT SHIFT CONTACT WIRE

Note 1: This adjustment applies only to parity keyboards equipped with a TP180076 T-lever at right side of SHIFT codebar mechanism.

Note 2: Contact wires on auxiliary contact block on left side of parity keyboards are designated A, B, C, and D from rear to front.

(1) To Check
Push universal lever down, until latched by latchlever. Trip keyboard by depressing universal codebar. Insert a 0.090 inch gauge diagonally into third keylever (SHIFT) slot in frame from left. Depress left SHIFT keylever until it bottoms on top of gauge.

Requirement
(a) Min some clearance between D contact wire and camming surface of its associated T-lever.
(b) Min 0.020 inch --- Max 0.055 inch between C contact wire and SHIFT terminal.

(2) To Check
Push universal lever down until latched by latchlever. Hold right SHIFT keylever fully depressed. Trip keyboard by depressing universal codebar. Release SHIFT keylever. Lightly take up play in contact block towards right.

Requirement
(a) Min 0.004 inch between C contact wire and camming surface of SHIFT T-lever with all contact block play lightly taken up toward right.
(b) Min 0.015 inch between D contact wire and SHIFT terminal.
(c) Min 0.025 inch between C contact wire and rear SHIFT codebar at closest point of travel.

To Adjust
Bend contact wire(s) using TP185829 bending tool.
"CTRL" CONTACT WIRE

Note 1: This adjustment applies only to parity keyboards equipped with TP185780 CTRL keylever spring but without TP186049 blocking lever and TP186051 tie link.

Note 2: Contact wires on auxiliary contact block on left side of parity keyboards are designated A, B, C, and D from rear to front.

(1) To Check
With the CTRL keytop unoperated, lightly take up play in contact block towards left to make clearance between the B contact wire and CTRL terminal a minimum. Check Requirement (a). Lightly take up play in contact block towards right to make clearance between B contact wire and CTRL terminal a maximum. Check Requirement (b).

(2) To Check
Fully depress the CTRL keytop and hold it depressed. Lightly take up play in contact block towards left to make clearance between the A contact wire and CTRL terminal a minimum. Check Requirement (c). Lightly take up play in contact block towards right to make clearance between A contact wire and CTRL terminal a maximum. Check Requirement (d).

Requirement
(a) Min 0.008 inch between B contact wire and CTRL terminal.
(b) Max 0.050 inch between B contact wire and CTRL terminal.
(c) Min 0.008 inch between A contact wire and CTRL terminal.
(d) Max 0.050 inch between A contact wire and CTRL terminal.

To Adjust
Bend contact wire(s) with TP185829 bending tool as shown.
2.05 Contact Wires (continued)

"CTRL" CONTACT WIRE

Note 1: This adjustment applies only to parity keyboards equipped with TP185780 CTRL key-lever spring and TP186049 blocking lever and TP186051 tie link.

Note 2: Contact wires on auxiliary contact block on left side of parity keyboards are designated A, B, C, and D from rear to front.

1) To Check
   With the CTRL keytop unoperated, lightly take up all play in contact block towards the left.

   Requirement
   Min 0.025 inch --- Max 0.035 inch
   between B contact wire and CTRL terminal.

2) To Check
   Fully depress the CTRL keytop and then trip the keyboard. Release the CTRL keytop.
   Lightly take up all play in contact block towards the left.

   Requirement
   Min 0.015 inch --- Max 0.030 inch
   between A contact wire and CTRL terminal.

To Adjust
Bend contact wire(s) with TP185829 bending tool as shown.
2.06 Contact Block Spring and Contact Wire Spring

CONTACT BLOCK SPRING

Requirement
Min 18 oz---Max 42 oz
to start contact block moving.

Note: Check both front and rear contact block springs.

CONTACT WIRE SPRING

To Check
Push universal lever down until
latched by latchlever. Place
T-levers down in marking position.
Trip keyboard by depressing universal
codebar.

Requirement
Min 3/4 oz---Max 1-1/4 oz
to start each contact wire moving
away from terminal.
2.07 Spacebar Spring and Keylever Spring

Note: The SPACEBAR SPRING and KEYLEVER SPRING adjustments do not apply to keylever springs associated with the SPACE, BLOCK, hyphen, or O keytops found on numeric-type keyboards.

**SPACEBAR SPRING**

To Check
Push universal lever down until latched by latchlever. Depress spacebar and then release.

Requirement
Min 5 grams --- Max 25 grams to start spacebar moving.

**KEYLEVER SPRING**

To Check

Requirement
Min 5 grams --- Max 30 grams to start selected keytop moving.

Note: Check each keylever spring.
2.08 HERE IS, BREAK, CTRL, and REPT Keylever Springs

"BREAK" KEYLEVER SPRING

Requirement
Min 4-1/2 oz---Max 10 oz to start keytop moving.

"CTRL" KEYLEVER SPRING

Requirement
Early design keyboards equipped with TP180102 keylever spring:
Min 1-1/2 oz---Max 3-1/2 oz to start keytop moving.

Late design keyboards equipped with TP185780 keylever spring:
Min 4-1/2 oz---Max 6-1/2 oz to start keytop moving.

"HERE IS" KEYLEVER SPRING

Requirement
Min 18 grams---Max 35 grams to start keytop moving.

"REPT" KEYLEVER SPRING

Requirement
Min 15 grams---Max 30 grams to start keytop moving.
2.09 SPACE, BLOCK, Hyphen, or O Keylever Springs

KEYLEVER SPRINGS ('"SPACE," "BLOCK," HYPHEN, "O" KEYTOPS)

Note 1: This adjustment applies only to keylever springs associated with SPACE, BLOCK, hyphen, or O keytops found on numeric-type keyboards.

To Check
Push universal lever down until latched by latchlever. Depress either the SPACE, BLOCK, hyphen, or O keytop. Release selected keytop.

Requirement
Min 20 grams---Max 65 grams
to start selected keytop moving.

Note 2: Repeat above procedure for each of the SPACE, BLOCK, hyphen, and O keytops.
2.10 Reset Bail Spring

RESET BAIL SPRING

To Check
Push universal lever down until latched by latchlever. Trip keyboard by depressing RUB-OUT keytop.

Requirement
Min 1-1/2 oz---Max 2 oz to start reset bail moving.

(Front View)
UNIVERSAL LINK SPRING

To Check
Push universal lever down until latched by latchlever. Trip keyboard by depressing universal codebar.

Requirement
Min 1/2 oz—Max 1-1/4 oz to start universal link moving.

(Front View)
2.12 Shift Codebar Spring

**SHIFT CODEBAR SPRING**

**Requirement**
Nonparity keyboards:
- Min 1-1/4 oz --- Max 2-1/2 oz to start shift codebar tie link moving.

Parity keyboards:
- Min 2 oz --- Max 3-1/4 oz to start shift codebar tie link moving.
2.13 Nonrepeat Lever Spring

Note: Remove keyboard cover. For disassembly instructions, see appropriate keyboard section.

NONREPEAT LEVER SPRING

To Check
Push universal lever down until latched by latchlever.

Requirement
Min 1/4 oz -- Max 3/4 oz to start nonrepeat lever moving.
2.14 Universal Lever Spring

**UNIVERSAL LEVER SPRING**

To Check
Push universal lever down until latched by latchlever. Hold reset bail away from universal lever.

Requirement
Min 1/2 oz---Max 1-1/2 oz
to start universal lever moving.

(Right Side View)

Note: Replace keyboard cover and reassemble keyboard (including H-plate) onto subbase. For reassembly instructions, see the appropriate keyboard section.
2.15  Distributor Trip Linkage

**DISTRIBUTOR TRIP LINKAGE**

To Check
Place typing unit in stop condition. Depress RUB-OUT key to trip distributor clutch. Rotate main shaft until keyboard follower lever is moved to its lowest point by cam roller. Push against reset bail spring anchor with just enough force to slightly move reset bail up.

---

Requirement
Early design keyboards equipped with TP180086 universal lever:
- Min 0.010 inch --- Max 0.035 inch
  between latchlever and universal lever.

Late design keyboards equipped with TP182240 or TP185766 universal lever:
- Min 0.010 inch --- Max 0.040 inch
  between latchlever and universal lever.

To Adjust
Loosen clampscrew friction tight. Using pry points and slot in casting, position trip linkage adjusting bracket until requirement is met. Tighten clampscrew.

Related Adjustment
Affects
**TRIP LEVER ENGAGEMENT** (See appropriate typing unit section.)
2.16 Latchlever Spring

**LATCHLEVER SPRING**

To Check
Place typing unit in stop condition. Trip distributor clutch and rotate main shaft until keyboard follower lever is moved by cam roller to its lowest point.

Requirement
Min 1/2 oz --- Max 1 oz to start latchlever moving.

Note: Replace call control unit onto subbase. For reassembly instructions, see appropriate keyboard section.

### 1. GENERAL

1.01 This section provides adjustment information for the 33 typing unit. New within this issue is (a) exclusive coverage of 33 typing unit, (b) engineering changes, (c) two-color printing and typing unit suppression features, (d) revised order of adjustments, (e) title changes (which now provide a functional description of the associated area). Marginal arrows indicating changes are omitted.

1.02 In the adjustments covered in this section, location of clearances, position of parts, and point and angle of scale applications.
are illustrated by line drawings. Requirements and procedures are set forth in the several texts that accompany the line drawings. Required tools are included in TP185830 maintenance tool kit and are listed in Section 570-005-800. A DXD800 Signal Distortion Test Set was used to determine the requirements for the selector receiving margins.

1.03 Adjustments are divided into two categories — basic and variations. Basic adjustments apply to all friction feed and/or sprocket feed typing units. Adjustments found under variations apply only to typing units which have the particular feature(s) under consideration. The F and S following an adjustment title mean that the adjustment applies only to friction feed (F) or sprocket feed (S) typing units. No letter designation indicates that the adjustment applies to both types of equipment.

1.04 Adjustments are presented in a definite order which is considered the best to follow when completely readjusting the equipment. Certain interrelated adjustments, which appear on the same page, should be checked and adjusted in a definite sequence. The sequence is indicated by the letters (A), (B), etc. No single adjustment should be undertaken without first completely understanding the procedure and knowing the requirements. Therefore, read a procedure all the way through before making an adjustment or checking a spring tension.

Note: Disconnect the typing unit from any ac or dc potential prior to inspection, minor repair, extensive maintenance, or a complete readjustment.

1.05 References to left, right, front, rear, etc consider the typing unit to be viewed from a position where the carriage area faces
up and the selector area is located to the viewer's left.

1.06 Unless specifically stated otherwise, make screws or nuts friction tight to make an adjustment and tighten them securely once the adjustment has been made.

1.07 When a procedure calls for using pry points or slots to make an adjustment, place a screwdriver between the points or in the slots and pry parts in the proper direction.

1.08 Due to a high degree of congestion within certain areas of some typing units, some disassembly will be required prior to making certain adjustments. If parts or subassemblies are removed from the typing unit to facilitate the making of an adjustment, be sure that they are subsequently replaced. Recheck any adjustments that may have been affected by the removal of parts or subassemblies.

Note 1: Do not remove parts and/or subassemblies unless it is considered absolutely necessary to perform an adjustment.

Note 2: Instructions for the disassembly and reassembly of parts and/or subassemblies are given in the appropriate disassembly and reassembly section and/or appropriate illustrated parts section.

Note 3: Do not lift typing unit while holding any part of the selector mechanism. Excessive strain on the selector mechanism, due to the weight of the typing unit, may cause selector malfunctioning. See appropriate disassembly and reassembly section for the proper method of lifting typing unit from its subbase.

1.09 Related adjustments are listed with some of the adjustment texts and are primarily intended to aid in troubleshooting the equipment. As an example, suppose that in searching for a
trouble it is discovered that the FUNCTION CLUTCH POSITION adjustment does not meet its requirement. Under Related Adjustments it is indicated that this adjustment is affected by the LEFT BEARING POSITION adjustment. First, check it to see if it is the cause of the trouble. Also, it is indicated that the FUNCTION CLUTCH POSITION adjustment affects FUNCTION CLUTCH ENDPLAY, CODEBAR CLUTCH ENDPLAY, and CODEBAR CLUTCH TRIP LEVER LINE-UP adjustments. If the former adjustment is changed, check the latter adjustments.

Note: Information in parentheses ( ) following any related adjustment gives the associated paragraph number and area, if different from the paragraph number at the top of the page.

1.10 The spring tensions specified in this section are indications, not exact values. Therefore, to obtain reliable readings, it is important that spring tensions be measured by spring scales placed in the positions shown on pertinent line drawings. Springs that do not meet their requirements should be replaced by
new ones. Only those springs that directly affect the operation of the typing unit are measured, however, others may be measured indirectly in the process. If, at first, the spring tension requirement cannot be met, replace the indicated spring being directly measured. Then if the requirement is not met, any springs that are indirectly measured in the procedure should be replaced, one at a time, with the performance of requirement checks each time a spring is replaced.

Note 1: Use only spring scales which are recommended by the manufacturer and found in Maintenance Tools Section 570-005-800.

Note 2: The spring tensions may be checked in any sequence.

1.11 All adjustment procedures should be started with the typing unit in the stop condition. It is in the stop condition when the selector armature is in its attracted (frontward) position and all clutches are disengaged.

1.12 To place the typing unit in the stop condition, use TP185832 armature clip to hold the selector armature in its attracted (frontward) position. Rotate the main shaft clockwise (as viewed from the left) until all clutches are in a stop position. Fully disengage all of the clutches as instructed in 1.13 following.

Note 1: A stop position is that position where a shoe lever contacts a trip lever.

Note 2: The distributor clutch will not disengage unless the answer-back drum is in its home position, which is the position where the control lever is fully detented into the indent on the answer-back drum.

1.13 When disengaged, a clutch is latched so that a shoe lever is held in its stop position by a trip lever while a corresponding
latchlever is seated in a notch of the clutch disc. This allows the clutch shoes to release their tension on the clutch drum. With all clutches disengaged, the main shaft will turn freely without any clutch shoes dragging.

Note: If the shaft is turned by hand, a clutch will not fully disengage upon reaching a stop position. Where an adjustment procedure calls for disengagement, rotate the clutch to a stop position, apply a screwdriver to the associated stop-lug, and push the clutch disc in the normal direction of main shaft rotation until the corresponding latchlever seats in its clutch disc notch. As a reminder, the word "latched" follows instructions to disengage the clutches.

1.14 A clutch is engaged when a trip lever is moved up so that it no longer holds a shoe lever in its stop position. When this action occurs, the shoe lever and a stop-lug on the clutch disc move apart, and the clutch shoes wedge against the drum, so that when the shaft is turned, the clutch will turn in unison with it.

1.15 Manual Operation: To manually operate the typing unit, place it in the stop condition as instructed in 1.12 and 1.13. Momentarily permit the armature to move to its un-attracted (rearward) position to trip the selector clutch. Slowly rotate the main shaft clockwise (as viewed from the left) until all push levers have moved under their respective selector levers. Using a spring hook, strip the push levers from under the selector levers corresponding to the spacing elements of the code combination to be set up. Then continue to rotate the main shaft until the proper condition is set up or the character is cleared through the typing unit.

1.16 The selector levers are numbered 1, 2, 3, 4, 5, 6, and 8 from left to right. To set up the character Y, for example, whose 8-level code combination is 1--45-78, strip the push levers from the 2, 3, and 6 selector levers.

1.17 Code combinations within this section are not always given as parity codes. Parity codes are obtained by proper transformation of the eighth code level as explained in the typing unit principles of operation section.

1.18 To aid in physically locating the adjustments and spring tensions, the typing unit is divided into eleven areas. These areas are indicated in Figures 1 through 4 as follows:

2. BASIC UNIT

2.01 Distributor Area

(B) SHAFT LEFT BEARING GAP

Requirement
Min some---Max 0.012 inch between left bearing and clutch gear assembly as gauged by eye.

To Adjust
Disengage (latch) distributor clutch. Hold clutch gear assembly firmly to right. Position left bearing with clampscrews loosened. Tighten left bearing clampscrews.

(A) BRUSH HOLDER GAP

(1) Requirement
With distributor clutch disengaged (latched)
Min 0.010 inch---Max 0.060 inch between brush holder and disc.

(2) Requirement
During entire brush holder rotation
Min 0.002 inch between brush holder and disc.

To Adjust
With three bearing clampscrews, position distributor shaft. Tighten right, but not left, bearing clampscrew.
2.02 Distributor Area (continued)

TRIP SHAFT POSITION

To Check
Place distributor clutch in the stop position.

(1) Requirement
With play taken up to minimize all clearances, the trip lever should engage
Min two-thirds width of formed end of shoe lever.

(2) Requirement
Rear extension of control lever should not bind in its slot in answer-back block.

To Adjust
Loosen clampscrews friction tight and position trip shaft. Tighten clampscrews.
2.03 Distributor Area (continued)

**CLUTCH SHOE LEVER GAP**

To Check
Push universal lever down until latched by latchlever. Disengage (latch) distributor clutch. Measure and record clearance between shoe lever and stop-lug. Trip distributor clutch by moving trip lever rearward. Fully seat the clutch shoes by applying slight pressure against the shoe lever along its normal path of forward travel. Measure and record same clearance as above.

(1) Requirement
With distributor clutch disengaged (latched)
Min 0.015 inch
between stop-lug and shoe lever.

(2) Requirement
Clearance between stop-lug and shoe lever
Min 0.050 inch—Max 0.080 inch
greater when distributor clutch is engaged than when disengaged.

To Adjust
Remove answer-back drum. With clamp-screw friction tight, position trip lever using pry point. Tighten clamp-screw. Replace answer-back drum.

(Left Side View)
2.04 Distributor Area (continued)

Note 1: Remove typing unit from subbase to facilitate making succeeding adjustments. For instructions, see the appropriate disassembly and reassembly section.

Note 2: Do not lift typing unit while holding any part of the selector mechanism. Excessive strain on the selector mechanism, due to the weight of the typing unit, may cause selector malfunctioning. See the appropriate disassembly and reassembly section for the proper method of lifting the typing unit from its subbase.

**BRUSH HOLDER POSITION**

**Requirement**
- With distributor clutch disengaged (latched), pointer should be within locating mark.

**To Adjust**
- Loosen mounting screws and position distributor brush holder. Tighten mounting screws.

(Right Side View)
2.05 Distributor Area (continued)

STOP BAIL SPRING

To Check
Place answer-back drum in home position. Trip distributor clutch and rotate main shaft until keyboard follower lever is moved by cam roller to its lowest point.

Requirement
Min 3 oz—Max 5 oz to start stop bail moving.

KEYBOARD FOLLOWER LEVER SPRING

Requirement
With H-plate removed and keyboard follower lever not in contact with cam roller
Min 2 oz—Max 3 oz to start keyboard follower lever moving.
2.06 Distributor Area (continued)

**BRUSH HOLDER SPRING**

Requirement
- New brush
  - Min 10-1/2 oz --- Max 13-1/2 oz
- Brush worn to 1/4 inch length
  - Min 7-1/2 oz --- Max 10-1/2 oz
to start outer brush moving.

**CLUTCH LATCHLEVER SPRING**

Requirement
- With clutch tripped and latchlever resting on clutch disc as shown
  - Min 1-1/4 oz --- Max 2-1/4 oz
to start clutch latchlever moving.
2.07 Main Shaft Area

(A) **LEFT BEARING POSITION**

**Requirement**
The start cam follower, selector levers, and spacing locklever should fully engage their cams when cam sleeve is in contact with the left bearing, and the left side of the left bearing should protrude beyond selector side plate.

**To Adjust**
Loosen left bearing clampscrews and position left bearing. Tighten clampscrews.

(B) **SELECTOR CAM ENDPLAY**

**To Check**
Disengage (latch) selector clutch. Take up play in main shaft toward right.

**Requirement**
Min 0.002 inch—Max 0.012 inch—endplay between left bearing and collar.

**To Adjust**
With the selector clutch drum mounting screw friction tight, position the clutch drum. (If a complete readjustment of the typing unit is to be performed, loosen all screws on main shaft except collar screw immediately to the right of the left main shaft bearing.) Tighten mounting screw.

---

Related Adjustments
- Affects
- FUNCTION CLUTCH POSITION (Par. 2.08)
- DRIVEN GEAR LINE-UP (Par. 2.09)
- CODEBAR CLUTCH TRIP LEVER LINE-UP (Par. 2.11)
2.08 Main Shaft Area (continued)

Note: Make this adjustment only when a complete adjustment of the typing unit is being undertaken.

(B) FUNCTION CLUTCH ENDPLAY

To Check
Disengage (latch) function clutch. Take up clearances to make function clutch endplay a maximum.

Requirement
Min 0.005 inch—Max 0.015 inch endplay in function clutch.

To Adjust
With three function casting clampscrews loosened friction tight, loosen collar clampscrew and position function clutch to meet requirement. Tighten all clampscrews.

Related Adjustment
Affected By
FUNCTION CLUTCH POSITION
(Par. 2.08)

(A) FUNCTION CLUTCH POSITION

To Check
Take up play to minimize clearance between carriage drive eccentric and end of roller shaft.

Requirement
Min 0.020 inch—Max 0.040 inch clearance between carriage drive eccentric and end of roller shaft as gauged by eye.

To Adjust
Loosen three function casting clampscrews friction tight and line up left side of lower portion of function casting with left side of lower projection from codebar basket rear tie bracket by moving the function casting. Loosen drum mounting screw and position function clutch to meet requirement. Tighten drum mounting screw.*

*Related Adjustments
Affects
FUNCTION CLUTCH ENDPLAY (Par. 2.08)
CODEBAR CLUTCH ENDPLAY (Par. 2.09)
CODEBAR CLUTCH TRIP LEVER LINE-UP
(Par. 2.11)

Affected By
LEFT BEARING POSITION (Par. 2.07)
2.09 Main Shaft Area (continued)

CODEBAR CLUTCH ENDPLAY

To Check
Disengage (latch) codebar clutch. Take up clearances to make codebar clutch endplay a maximum.

Requirement
Min 0.005 inch---Max 0.015 inch endplay in codebar clutch.

To Adjust
Loosen codebar clutch mounting screw and position codebar clutch to meet requirement. Tighten codebar clutch mounting screw.

Related Adjustment
Affected by
FUNCTION CLUTCH POSITION (Par. 2.08)

DRIVEN GEAR LINE-UP

Requirement
Driven gear centered on drive gear as gauged by eye.

To Adjust
Loosen driven gear mounting screw, and position driven gear to meet requirement. Tighten driven gear mounting screw.

Related Adjustment
Affected By
LEFT BEARING POSITION (Par. 2.07)
2.10 Main Shaft Area (continued)

(A) FORM FEED CLUTCH ENDPLAY - S

Requirement
--- Min some---Max 0.012 inch endplay between washer and form feed clutch.

To Adjust
Loosen drum screw and position drum.

(B) LATCHLEVER ENDPLAY - S

Requirement
--- Min some---Max 0.012 inch endplay between latchlever assembly and collar.

To Adjust
Loosen setscrew and position collar. Tighten screw.

(Top View)
2.11 Main Shaft Area (continued)

**CODEBAR CLUTCH TRIP LEVER LINE-UP**

(1) Requirement
As gauged by eye, codebar clutch trip lever approximately aligned with shoe lever within 0.030 inch.

(2) Requirement
Min 0.005 inch between function clutch trip roller's shaft and codebar reset cam when all play is taken up to make clearance minimum.

To Adjust
Loosen clampscrew and position trip lever.

Note: It may also be necessary to loosen setscrew in collar.

Related Adjustments
Affects
TRIP SHAFT LATCHLEVER ENDPLAY (Par. 2.11)

Affected By
LEFT BEARING POSITION (Par. 2.07)
FUNCTION CLUTCH POSITION (Par. 2.08)

**TRIP SHAFT LATCHLEVER ENDPLAY**

Requirement
Min some---Max 0.012 inch endplay in latchlevers, as gauged by eye.

To Adjust
Loosen setscrew and position collar. Tighten setscrew.

Related Adjustment
Affected By
CODEBAR CLUTCH TRIP LEVER LINE-UP (Par. 2.11)
2.12 Main Shaft Area (continued)

CODEBAR CLUTCH TRIP LEVER ENGAGEMENT

Requirement
With typing unit in stop condition, trip lever should engage shoe lever by approximately full thickness of shoe lever.

To Adjust
Loosen clampscrew and position codebar clutch trip cam follower arm. Tighten clampscrew.

Note: Make sure follower arm is at center of codebar clutch trip cam.
2.13 Main Shaft Area (continued)

TRIP LEVER SPRINGS

Note: Check for both codebar and function clutches.

Requirement
With clutch engaged, codebar clutch
Min 6 oz --- Max 12 oz
function clutch
Min 2 oz --- Max 4 oz
to start trip lever moving.

TRIP LEVER

FOLLOWER LEVER

SHOE LEVER

STOP-LUG

FUNCTION CLUTCH TRIP LEVER ENGAGEMENT

Requirement
With typing unit in stop condition, trip lever should engage shoe lever by approximately full thickness of shoe lever.

To Adjust
Loosen clampscrew and position follower lever. Tighten clampscrew.

CLAMPSCREW

FOLLOWER LEVER

TRIP LEVER

(Right Rear View)
2.14 Main Shaft Area (continued)

**CODEBAR AND FUNCTION CLUTCH SHOE LEVER GAPS**

(1) To Check
Disengage (latch) clutch. Trip clutch by lifting trip lever. Permit trip lever to come to rest on shoe lever. Fully seat clutch shoes by applying slight pressure against shoe lever along its normal path of forward travel.

Requirement
Min 0.055 inch—Max 0.085 inch
between edge of trip lever and edge of shoe lever.

(2) To Check
Disengage (latch) clutch.

Requirement
Min 0.015 inch between shoe lever and stop-lug.

To Adjust
Loosen clampscrew. Lengthen or shorten trip lever clearance to meet requirement. Tighten clampscrew.

Note: On typing units with either a scribed line or a notch on the trip lever, gauge by eye the alignment of the scribed line or notch and the front edge of the shoe lever. They are to line up.

**LATCHLEVER SPRINGS**

Requirement
With latchlever resting on high portion of clutch disc
Min 2 oz—Max 3 oz
to start latchlever moving.

(Rear View)

(Right Rear View)
2.15 Main Shaft Area (continued)

Note 1: These tensions apply to all clutches.

**CLUTCH SHOE LEVER SPRING**

Requirement
With clutch engaged and clutch disc held to prevent its turning
- Min 15 oz --- Max 20 oz
to pull clutch shoe lever into contact with stop-lug.

(Right Side View)

**CLUTCH SHOE SPRING**

Note 2: In order to check this spring tension, it is necessary to remove the clutch from the main shaft. Therefore, it should not be checked unless there is reason to believe it will not meet its requirement.

To Check
Remove clutch drum.

Requirement
- Min 3 oz --- Max 5 oz
to start primary clutch shoe moving.

(Left Side View)
2.16 Selector Area

**TRIP LEVER SPRING**

**Requirement**
With typing unit in stop condition and shoe lever held away from trip lever
Min 6 oz---Max 7-3/4 oz to start trip lever moving.

*Note 1:* Start lever and latch lever springs also influence this spring tension. Check them individually if above requirement is not met. If they meet requirements, replace trip lever spring.

**Note 2:** On typing units with either a scribed line or a notch on the trip lever, gauge by eye the alignment of the scribed line or notch and the front edge of the shoe lever. They are to line up.

---

**SHE LEVER GAP AND TRIP LEVER ENGAGEMENT**

(1) To Check
Disengage (latch) selector clutch.
Trip selector clutch by momentarily permitting the armature to move to its unattracted (rearward) position. Fully seat clutch shoes by applying slight pressure against shoe lever along its normal path of forward travel.

**Requirement**
Min 0.055 inch---Max 0.085 inch between edge of trip lever and edge of shoe lever.

(2) To Check
Disengage (latch) selector clutch.

**Requirement**
Min 0.015 inch between shoe lever and stop-lug.

(3) To Check
Disengage (latch) selector clutch.

**Requirement**
Trip lever should engage shoe lever Min 2/3 thickness of shoe lever.

**To Adjust**
Loosen clampscrew friction tight and position trip lever using front and/or rear pry points. Tighten clampscrew.

**Related Adjustment**
Affects

ARMATURE BRACKET POSITION
(Par. 2.17)
ARMATURE BRACKET POSITION

Requirement
Armature bracket should be positioned against its down and rear positioning surfaces on right and left side plates so that it is parallel within 0.002 inch with rear surfaces measured at ends.

To Adjust
Loosen two mounting screws and position bracket. Tighten mounting screws.

Related Adjustments
Affects
ARMATURE SPRING
(Par. 2.18)
RECEIVING MARGINS
(Par. 2.120)

Affected By
SHOE LEVER GAP AND TRIP LEVER ENGAGEMENT (Par. 2.16)
2.18  Selector Area (continued)

ARMATURE SPRING

Note: This is a preliminary adjustment. It should not be considered final until RECEIVING MARGINS (Par. 2.120) adjustment is completed, and, as finally adjusted, it could fall outside limits specified below.

To Check
Place typing unit in stop condition and carriage near right margin. Hold start lever away from armature.

Requirement
Min 2-1/4 oz --- Max 4-3/4 oz  

to pull armature to midpoint of travel.

To Adjust
Rotate adjusting nut clockwise to increase armature spring tension and counterclockwise to decrease it.

Related Adjustments
Affects
RECEIVING MARGINS (Par. 2.120)

Affected By
ARMATURE BRACKET POSITION (Par. 2.17)
2.19 Selector Area (continued)

START LEVER SPRING

Requirement
With typing unit in stop condition
Min 19 oz---Max 23 oz
to pull start lever spring to installed length.

(Left Side View)

LATCHLEVER SPRING

Requirement
With selector latchlever resting on high part of clutch disc
Min 2 oz---Max 3 oz
to start selector latchlever moving.

(Left Side View)
2.20 Selector Area (continued)

SELECTOR LEVER SPRINGS

To Check
Set up an all spacing code combination in selector. Rotate main shaft until typing unit is in stop condition.

Requirement
Min 1-1/2 oz --- Max 3-1/4 oz to start selector lever moving.

Note: Check each selector lever spring.

(Left Side View)

SPACING LOCKLEVER SPRING

To Check
Set up an all spacing code combination in selector. Rotate main shaft until typing unit is in stop condition.

Requirement
Min 1-1/2 oz --- Max 3 oz to start locklever moving.

(Left Side View)
2.21 Selector Area (continued)

STRIPPER BAIL SPRING

To Check
Set rangefinder at 60. Set up an all spacing code combination in selector. Rotate main shaft until typing unit is in stop condition.

Requirement
Min 1/4 oz---Max 1 oz
to start stripper bail moving.

PUSHLEVER SPRINGS

Note 1: To measure this tension, selector mechanism must be removed from typing unit. Therefore, do not check it unless there is cause to suspect it will not meet requirement.

CAUTION: BEFORE REMOVING SELECTOR CLUTCH, MAKE SURE ARMATURE IS IN THE SPACING POSITION. HOLD SELECTOR LEVERS IN PLACE AWAY FROM SELECTOR CLUTCH WITH TP184098 TOOL.

Requirement
With blocking lever held away from pushlever
Min 1-1/2 oz---Max 3 oz
to start pushlever moving.

Note 2: Check each pushlever spring.
SELECTOR CLUTCH TORQUE

CAUTION: TO PREVENT ELECTRICAL SHOCK EXERCISE CARE WHEN WORKING WITH TYPING UNIT UNDER POWER.

To Check
Place TP185832 armature clip so as to hold armature attracted. Plug typing unit plugs into proper call control unit receptacle and apply power to typing unit. Hold shoe lever with spring scale as shown. Trip selector clutch by moving armature rearward. Allow selector clutch to advance until latchlever is disengaged. Check requirement. Remove all power connections.

Requirement
Min 13 oz—Max 16 oz to hold shoe lever.
ROCKER SHAFT POSITION AND ENDPLAY

(1) Requirement
Both bearings should be centered on base casting, as gauged by eye.

To Adjust
Loosen collar setscrews and bearing clampscrews and position bearings.
Tighten bearing clampscrews.

(2) Requirement
The left end of function rocker shaft should line up with inside top edge of
base casting lip, however:
  0.030 inch misalignment is permissible to the left.
  0.060 inch misalignment is permissible to the right.

(3) Requirement
Min some—Max 0.010 inch
endplay in function rocker shaft.

To Adjust
Loosen setscrews and position function rocker shaft and both collars.
Tighten both setscrews.

Related Adjustments Affects
CODEBAR RESET LEVER LINE-UP (Par. 2.27)
CODEBAR RESET LEVER POSITION (Par. 2.28)
PRINT SUPPRESSION LATCH — HORIZONTAL CLEARANCE (Par. 2.29)
SECTION 574-122-700TC

2.24 Function Area (continued)

BEARING ALIGNMENT

Note 1: This adjustment applies to main shaft bearings, distributor shaft bearings, function rocker shaft bearings, and codebar reset ball bearings. It should only be made if bearing clamps have been loosened, or if a bind is detected in associated shafts.

Requirement
Bearings should be aligned with their respective shaft.

To Adjust
(a) With bearing clamps loosened, position bearing using finger pressure while rotating associated shaft. Tighten clampscrews.

(b) If bind still exists, keep bearing clamp tightened and apply a light blow vertically to top of bearing clamp.

MAIN SHAFT ROTATION

Note 2: This adjustment should be checked when adjustments affecting the typing unit drive system have been disturbed.

(1) To Check
With motor drive belt removed and all clutches disengaged (latched), manually rotate main shaft.

Requirement
No excessive drag or binding should be detected.

(2) To Check
With motor belt installed and all clutches disengaged (latched), manually rotate main shaft.

Requirement
No excessive drag or binding should be detected.

Note 3: Excessive drag or binding when the main shaft is rotated will cause insufficient receiving margins.

To Adjust
If requirements are not met, check following adjustments:
GEAR BACKLASH (Motor Area) (Par. 2.25)
BELT TENSION (Motor Area) (Par. 2.26)
LEFT BEARING POSITION (Main Shaft Area) (Par. 2.07)
SELECTOR CAM ENDPLAY (Main Shaft Area) (Par. 2.07)
FUNCTION CLUTCH ENDPLAY (Main Shaft Area) (Par. 2.08)
CODEBAR CLUTCH ENDPLAY (Main Shaft Area) (Par. 2.09)
DRIVEN GEAR LINE-UP (Main Shaft Area) (Par. 2.09)
FORM FEED CLUTCH ENDPLAY (Main Shaft Area) - S (Par. 2.10)
SHOE LEVER GAP AND TRIP LEVER ENGAGEMENT (Selector Area) (Par. 2.16)
BEARING ALIGNMENT (Par. 2.24)
GEAR BACKLASH

To Check

Requirement
Min 0.010 inch—Max 0.032 inch play at fan rim.

To Adjust
Loosen mounting screws and position motor gear bracket. Tighten screws.

Related Adjustment Affects
BELT TENSION (Par. 2.26)
SECTION 574-122-700TC

2.26 Motor Area (continued)

BELT TENSION

To Check

Rotate fan clockwise (viewed from left) until upper level of motor belt becomes taut. Using a spring scale, apply 16 oz force at center of belt.

Requirement

Min 0.100 inch — Max 0.135 inch —
deflection at center of motor belt.

To Adjust

Loosen four clampscrews and rotate motor in cradle.
Tighten clampscrews.

Related Adjustments

Affects

RECEIVING MARGINS (Selector Area) (Par. 2.120)

Affected by

GEAR BACKLASH (Par. 2.25)
2.27 Function Area (continued)

CODEBAR RESET LEVER LINE-UP

Requirement
With typing unit in stop condition

1. Cam follower roller approximately centered on reset cam, as gauged by eye, Max 0.020 inch
   overhang permitted on right side only.
2. Min some---Max 0.010 inch
   endplay in codebar reset lever.
3. Min 0.005 inch
   between cam follower roller's shaft and function trip cam.

To Adjust
Loosen setscrews and position two collars.

Related Adjustments
Affects
CODEBAR RESET LEVER POSITION (Par. 2.28)

Affected By
ROCKER SHAFT POSITION AND ENDPPLAY (Par. 2.23)
2.28 Function Area (continued)

CODEBAR RESET LEVER POSITION

To Check
Place typing unit in stop condition. Push selector stripper ball towards front of typing unit to permit blocking levers to assume their spacing position. Take up play between codebar closest to front of typing unit and its associated blocking lever so as to make clearance a minimum.

Requirement
Min 0.012 inch --- Max 0.030 inch between the codebar closest to front of typing unit and its selector blocking lever.

To Adjust
With clamp nut loosened, use pry point to adjust codebar reset lever. Tighten clamp nut.

Related Adjustments
Affects
PRINT SUPPRESSION LATCH — HORIZONTAL CLEARANCE (Par. 2.29)
FUNCTION SHAFT AND CASTING POSITION (Par. 2.38)
REAR RAIL POSITION (Carriage Area) (Par. 2.46)
FOURTH PULSE LINKAGE POSITIONING (Carriage Area) (Par. 2.51)
PRINT SUPPRESSION LATCH LEVER RELEASE (Carriage Area) (Par. 2.55)
SPACE SUPPRESSION LEVER CLEARANCE — PRINTING (Spacing Area) (Par. 2.116)

Affected By
ROCKER SHAFT POSITION AND END-PLAY (Par. 2.23)
CODEBAR RESET LEVER LINE-UP (Par. 2.27)

CODEBAR RESET BAIL SPRING

To Check
Set up 'blank' code combination in the selector and rotate main shaft until codebar reset bail is in highest position.

Requirement
Min 5-3/4 oz --- Max 8-3/4 oz to start codebar reset bail moving.
2.29 Function Area (continued)

PRINT SUPPRESSION LATCH — HORIZONTAL CLEARANCE

(1) Requirement
With typing unit in the stop condition
Min 0.010 inch—Max 0.025 inch
between print suppression latch and
print suppression codebar.

(2) Requirement
Print suppression cam follower and
latch should move freely.

To Adjust
Loosen clamp nut(s)** and setscrews in
collars*. Position latch bracket using pry
point to meet (1) Requirement. Tighten
clamp nuts. Position collars to meet
(2) Requirement. Tighten setscrews.

Related Adjustments
Affects
FUNCTION SHAFT AND CASTING POSITION (Par. 2.38)

Affected By
ROCKER SHAFT POSITION AND ENDFLAP (Par. 2.23)
CODEBAR RESET LEVER POSITION (Par. 2.28)

*Note 1: Disregard (2) Requirement for typing units which are not equipped
with TP180744 collars.

**Note 2: Some typing units have one
clamp nut to loosen, others two,
depending upon the configuration of
the latch bracket used.
CODEBAR RESET GUIDE POSITION

(1) Requirement
Codebars should have no noticeable curvature when viewed from their ends.

Note: The following To Check is for units equipped with TP181574 EOT function lever, TP180801 universal function lever, or similar function levers.

To Check
Manually set up an all marking code combination in the selector. Rotate main shaft until the function lever reaches its highest point of travel. Lightly take up any play between the function lever and codebars.

(2) Requirement
The codebars should fully engage the function lever tines.

To Adjust
Loosen clampscrew and position codebar guide using pry point. Tighten clampscrew.

(Left Front View)

2.31 Function Area (continued)

**SELECTOR BLOCKING LEVERS POSITIONING**

**Note:** Set rangefinder to 80 on scale for both (1) and (2) To Check.

(1) **To Check**
Manually operate typing unit and set up an all marking code combination in selector. Continue rotating main shaft until selector levers are on peak of their respective cams and codebar ends are approximately flush with left edge of their associated blocking levers.

(1) **Requirement**
- Min 0.006 inch—Max 0.050 inch
  between the no. 1 blocking lever and its associated codebar.

(2) **Requirement**
- Min 0.003 inch
  between all remaining blocking levers and their associated codebars.

(2) **To Check**
Manually rotate main shaft. Hold armature forward in its marking position and rotate main shaft until selector clutch shoe lever is in vertical (12 o'clock) position. Continue rotating main shaft until shoe lever reaches 3 o'clock position as viewed from left, and note any vertical motion of no. 1 or no. 2 blocking levers.

Requirement
- No visible vertical motion of no. 1 or no. 2 blocking levers while selector clutch shoe lever is moving from 12 o'clock to 3 o'clock position.

To Adjust
Loosen clamp nut and position eccentric with hex key wrench. Keep high part of eccentric toward rear of typing unit. Tighten clamp nut.

**BLOCKING LEVER SPRINGS**

To Check
Set up an all spacing code combination in the selector. Rotate main shaft until typing unit is in stop condition.

Requirement:
- Min 1/2 oz—Max 1-1/4 oz
to start blocking lever moving.

**Note:** Check each blocking lever spring.
2.32 Function Area (continued)

**AUTOMATIC CODEBAR SPRING**

Requirement
With carriage at left margin TP180948 automatic codebar
Min 1/2 oz—Max 1-3/4 oz
TP183495, TP183496, TP183497 automatic codebars
Min 2 oz—Max 3 oz
to start automatic codebar moving.

**PRINT SUPPRESSION AND NO. 4 CODEBAR SPRING**

Requirement
With typing unit in stop condition and no. 4 codebar’s follower on carriage lifted
Min 12 oz—Max 14 oz
to start codebar moving.

Note 1: Check the print suppression and no. 4 codebar spring.

**CODEBAR SPRINGS**

Note 2: Check each codebar spring other than automatic, print suppression and no. 4.

Requirement
With typing unit in stop condition and codebar’s follower lifted
Min 5-1/2 oz—Max 7-1/2 oz
to start codebar moving.
2.33 Function Area (continued)

**FUNCTION PAWL SPRING**

**Requirement**
With typing unit in stop condition and all external loads which would influence the requirement removed.

<table>

</tr>
</tbody>
</table>

Min 9 oz 1-1/4 oz 3 oz
Max 13 oz 2-1/2 oz 5-1/2 oz

to start each function pawl moving.

Note: Check each pawl spring. TP180863 pawl spring is used with the carriage return function pawl. TP86283 pawl spring is used with the answer-back blocking function pawl. TP49420 pawl spring is used with BELL and EOT function pawls. All others may be either the TP49420 or TP86283 pawl springs.

**LEFT ROCKER DRIVE**

**To Check**
Set up carriage return code combination (1-34-8) in selector. Rotate main shaft until function ball is at highest point of travel. Take up carriage return function lever play in an upward direction at the pivot clearance.

**Requirement**
Min 0.015 inch - Max 0.050 inch between carriage return function lever and its function pawl.

**To Adjust**
Loosen clampscrew. Use pry point to adjust rocker drive arm. Tighten clampscrew.

**Related Adjustments**
Affects
- **RIGHT ROCKER DRIVE** (Par. 2.35)
- **CARRIAGE RETURN LEVER - LATCH CLEARANCE** (Par. 2.39)
- **FUNCTION LEVER RETAINER** (Par. 2.41)

**PAWL SPRING**

**FUNCTION PAWL**

**PRY POINT**

**CARRIAGE RETURN FUNCTION LEVER**

(Left Front View)
2.34 Function Area (continued)

**FUNCTION LEVER SPRINGS**

**Requirement**

With typing unit in stop condition, the spring scale requirements to start each function lever moving are

1. Min 19 oz—Max 24 oz to start LF and AUTO LF function levers moving.
   
   **Note 1:** Hold the blocking pawl up when checking this requirement.

2. Min 3-1/2 oz—Max 5-1/2 oz to start carriage return function lever moving.
   
   **Note 2:** Hold carriage return lever in forward position.

3. Min 3-1/2 oz—Max 5-1/2 oz to start remaining function levers moving.
2.35 Function Area (continued)

RIGHT ROCKER DRIVE

To Check
Disengage (latch) distributor clutch. Set up answer-back character WRU code combination (1-3----8) in selector. Rotate main shaft until function ball is at its highest point. Make sure that distributor clutch has not been tripped. Take up answer-back function lever play in an upward direction at the pivot to minimize clearance.

Requirement
Min 0.015 inch---Max 0.050 inch between answer-back function lever and its function pawl.

To Adjust
Loosen clampscrew. Use pry point to adjust right rocker arm. Tighten clampscrew.

Related Adjustments
Affects
FORM-OUT LEVER OVERTRAVER (Form Feed Area) - S (Par. 2.65)
LINE FEED PAWL STRIPPING (Form Feed Area) - S (Par. 2.75)
SPACE SUPPRESSION LEVER CLEARANCE — SPACING (Spacing Area) (Par. 2.117)

Affected By
LEFT ROCKER DRIVE (Par. 2.33)

Note: If typing unit is not equipped with the answer-back feature, select a code combination which will permit the rightmost function lever to be selected.
2.36 Function Area (continued)

![Diagram of stripper bail and function pawl](image)

(Left Front View)

**STRIPPER BAIL CLEARANCE**

**Requirement**
- With typing unit in stop condition
- Min 0.015 inch --- Max 0.025 inch

between function stripper bail and edge of stripped
end-of-line bell function.

**Note:** For typing units which are not equipped with the
end-of-line bell function pawl, check requirement at the TP180792
function pawl closest to slot F in function casting.

**To Adjust**
- Loosen clampscrew. Use pry point to position stripper bail’s drive
  arm. Tighten clampscrew.

**Related Adjustment**
- Affects
  
  **LINE FEED STRIPPER PLATE CLEARANCE** (Platen Area) - F (Par. 2.109)
PRINT SUPPRESSION LATCH — VERTICAL CLEARANCE

Requirement
With typing unit in stop condition and print suppression cam follower roller resting on its cam
Min 0.015 inch—Max 0.050 inch
between print suppression latch and print suppression codebar.

To Adjust
Loosen clamp nut. Using pry point, position print suppression cam follower. Tighten clamp nut.

PRINT SUPPRESSION CAM FOLLOWER SPRING

Requirement
With typing unit in stop condition
Min 4-1/2 oz—Max 7-1/4 oz
to start print suppression cam follower moving.
2.38 Function Area (continued)

**FUNCTION SHAFT AND CASTING POSITION**

Note: The (1) Requirement applies only to TP180772 shafts which have raised rings which serve to locate the stripper bail cam follower.

(1) Requirement

Min some---Max 0.010 inch between stripper bail cam follower and left side of slot in function casting.

To Adjust
Loosen clampscrews and position TP180772 shaft.

(2) Requirement

The shaft should be in contact with, or not more than

Max 0.003 inch away from the vertical surface at the center of the function casting.

To Adjust
With the center and two end clampscrews loosened, position to meet Requirements (1) and (2).

To Check

Manually set up all spacing code combination in selector. Rotate main shaft until suppression cam follower begins to rise on its cam.

(3) Requirement

Min 0.030 inch---Max 0.050 inch between blocking projections on print suppression codebar and the function lever in slot no. 6.

(4) Requirement

Min 0.005 inch between carriage drive eccentric and roller shaft on stripper bail cam follower with play taken up to make clearance a minimum.

To Adjust

With the two end clampscrews loosened, position casting to meet Requirements (3) and (4). Tighten clampscrews.

Related Adjustments

Affected By

- CODEBAR RESET LEVER POSITION (Par. 2.28)
- PRINT SUPPRESSION LATCH
- HORIZONTAL CLEARANCE (Par. 2.29)
2.39 Function Area (continued)

CARRIAGE RETURN LEVER – LATCH CLEARANCE

To Check
Position carriage to center of typing unit and carefully remove carriage return spring. Set up carriage return code combination (1-34---8) in selector. Rotate main shaft until function ball reaches lowest point of travel. Position left end of carriage return lever rearward to eliminate its play.

(1) Requirement
   Early design
   carriage return lever flush with carriage return latch
   Within 0.005 inch

(2) Requirement
   Late design
   Min some---Max 0.030 inch
   between carriage return lever and carriage return latch.

To Adjust
Loosen clampscrew. Use pry points to position carriage return lever. Tighten clampscrew. Replace carriage return spring.

Related Adjustment
Affected By
LEFTROCKER DRIVE (Par. 2.33)
2.40 Function Area (continued)

**CARRIAGE DRIVE BAIL ENDFLAP**

Note: This adjustment applies only to typing units which have a retaining ring at the left pivot.

To Check
Rotate main shaft until carriage drive bail is parallel to the base casting.

Requirement
Min some---Max 0.015 inch endplay in carriage drive bail.

To Adjust
Loosen clampscrew and position carriage drive bail's left pivot. Tighten clampscrew.

**CARRIAGE RETURN SPRING**

Requirement
With typing unit in stop condition and carriage at right margin
Min 56 oz---Max 64 oz
to pull carriage return spring to installed length.

**BELL CLAPPER GAP**

1. Requirement
With typing unit in stop condition
Min 0.030 inch---Max 0.070 inch between clapper and bell.

To Adjust
Using pliers, bend clapper spring.

2. Requirement
The bell must be audible when operated.
2.41 Function Area (continued)

**FUNCTION BAIL SPRING**

Requirement
With typing unit in stop condition
Min 72 oz -- Max 104 oz
to pull each function bail spring to installed length.

![Diagram of Function Lever Retainer](image)

**FUNCTION LEVER RETAINER**

Note: Perform (1) To Check, on units containing function lever retainers TP183851 and TP183853. For typing units equipped with the print-nonprint feature and TP185980 function lever retainers, perform (2) To Check.

1. **To Check**
   With an all marking code combination in the selector, manually operate the typing unit until the blade is at its highest point of travel.

2. **To Check**
   With an all marking code combination in the selector, manually operate the typing unit until the blade is at its lowest point of travel.

**Requirement**
Min some -- Max 0.020 inch
at the point of least clearance between the function lever retainer and its associated function levers.

**To Adjust**
Loosen mounting screws and position retainers. Tighten screws.

**Related Adjustment**
Affected By
**LEFT ROCKER DRIVE (Par. 2.33)**
2.42 Carriage Area

FRONT ROLLERS CLEARANCE

Note 1: This adjustment does not apply to typing units equipped with nonadjustable parts such as TP183503 bearing housing and TP183504 bearing retainer.

To Check
Place typing unit in stop condition. Remove the carriage return spring. Take up roller play toward the front of the typing unit.

Requirement
Min some—Max 0.005 inch between carriage front roller and carriage front rail.

To Adjust
Loosen mounting nut and position each roller against rail by means of eccentric shaft. Slowly back off eccentric shaft to meet requirement. Tighten mounting nut.

Note 2: Some positions of carriage front roller may show a slight drag condition. This is acceptable providing there is no perceptible increase in carriage friction due to condition.
2.43 Carriage Area (continued)

POWER BAIL ROLLER CLEARANCE

To Check
Trip function clutch and rotate main
shaft until carriage drive ball is at
lowest point of travel.

Requirement
Min some—Max 0.005 inch
between front roller and carriage
drive ball.

To Adjust
Loosen mounting nut and position
front roller by means of eccentric
shaft. Tighten mounting nut.

Related Adjustments
Affects
PRINT DRIVE LEVER POSITIONING (Par. 2.47)
RESET LEVER POSITIONING (Par. 2.52)

RACK AND PINION BACKLASH

To Check
Place typing unit in stop condition.

Requirement
Each rack should have
Min some—Max 0.010 inch
backlash.

To Adjust
Loosen lock plate clampscrews
and move lock plate towards
the rear. Loosen one adjusting
plate clampscrew friction tight
and place a 0.008-inch feeler
gauge between the rack and
adjusting plate. Position ad-
justing plate for no play be-
tween the rack and pinion using
pry point. Tighten adjusting
plate clampscrew and remove
feeler gauge. Repeat procedure
for adjusting plate on other side.
Position lock plate against adjusting plates. Tighten lock plate
clampscrews.

Note 2: Do not loosen both ad-
justing plate clampscrews at
the same time.

Note 1: This adjustment is to be performed
only on typing unit carriages containing the
TP180548 adjusting plate and TP180549
bracket.
2.44 Carriage Area (continued)

ROTARY DRIVE BAIL SPRING

To Check
Set up an all marking code combination in selector and rotate main shaft until the carriage drive ball is in its rearmost position.

Requirement
Min 17 oz --- Max 21-1/2 oz to start rotary drive ball moving.

(Right Side View)

VERTICAL DRIVE BAIL SPRING

Requirement
With typing unit in stop condition
Min 13 oz --- Max 18 oz to start typewheel moving.

TYPEWHEEL RETURN SPRING

Note: The following requirement does not apply to typing units equipped with the two-color printing feature. See TYPEWHEEL RETURN SPRING (Two-Color Printing, Part 3, Variations to Basic Adjustments) (Par. 3.20)

Requirement
With typing unit in stop condition
Min 2-1/2 oz --- Max 4-1/2 oz to move typewheel to platen.

(RIGHT SIDE VIEW)
SLIDE SPRINGS

Note: To check tensions of the slide springs, it is necessary to remove the carriage mechanism from typing unit. For instructions see appropriate disassembly and reassembly section. Do not check unless there is reason to believe that the slide springs do not meet their requirements.

Requirement
With carriage power bail in its stop position, towards the front, it should require values as shown in chart, to start slides moving.

* Print Suppression

REAR RAIL POSITION

(1) To Check
Position the dashpot plunger just outside the dashpot cylinder. With the selector no. 1 code level in the marking condition, rotate the main shaft until the shift slide barely contacts rear stop surface of stop plate. Take up all play to minimize the required clearance.

Requirement
Min 0.025 inch—Max 0.040 inch between bottom edge of shift slide and top edge of stop plate.

(2) To Check
Condition the typing unit as in (1) To Check above except place carriage to the right with center of the typewheel 1/2 inch from the right hand margin.

Requirement
Min 0.025 inch—Max 0.040 inch between bottom edge of shift slide and top edge of stop plate.

(3) To Check
Calculate the difference between the recorded measurements in (1) To Check and (2) To Check above.

Requirement
Max 0.010 inch difference between recorded measurements.

To Adjust
Loosen two carriage rear rail mounting screws friction tight, and position carriage rear rail using pry point. Tighten mounting screws.

PRESSURE ROLLER CLEARANCE
(Platen Area) - F (Par. 2.110)

Affected By
CODEBAR RESET LEVER POSITION
(Function Area) (Par. 2.28)
2.47 Carriage Area (continued)

(A) REAR ROLLER CLEARANCE

To Check
Rotate main shaft until carriage drive bail is in rearmost position.

Requirement
Min 0.008 inch
Max 0.008 inch
between carriage rear rail and carriage rear roller (upper).

To Adjust
Loosen clamp nut and position eccentric shaft with hex wrench in hex hole. Tighten clamp nut.

(B) PRINT DRIVE LEVER POSITIONING

To Check
Place typing unit in stop condition and move carriage until its power bail rollers are positioned directly above the carriage drive link. Take up play in vertical drive bail in a downward direction, and take up play in common stop arm toward the left.

Requirement
Late design typing units equipped with TP183993 cam sleeve
Min 0.065 inch
Max 0.090 inch
between vertical drive bail and common stop arm.

Early design typing units equipped with TP180806 cam sleeve
Min 0.229 inch
Max 0.239 inch
between vertical drive bail and common stop arm as gauged with a TP180588 adjusting tool.

Note: The TP180588 adjusting tool has a nominal dimension of 0.234 inch.

To Adjust
Loosen print drive lever clampscrew and position print drive lever using pry points. Tighten clampscrew.

Related Adjustments
Affects
RIGHT SLIDE GUIDE PLATE
RESET (Par. 2.58)
PRINT TRIP LEVER RELEASE
(Par. 2.50)
PRINT TRIP LEVER RESET
(Par. 2.53)

Affected By
POWER BAIL ROLLER
CLEARANCE (Par. 2.43)
REAR RAIL POSITION
(Par. 2.46)
SLIDE GUIDEPLATE SPRINGS

Note 1: To check slide guideplate springs, it is necessary to remove the carriage mechanism from the typing unit. See appropriate disassembly and reassembly section. Do not check unless there is reason to believe that the slide guideplate springs will not meet their requirement.

Requirement
Min 1 oz -- Max 3 oz to pull each spring to installed length.

Note 2: Check right and left springs.

TYPEWHEEL POSITIONING

Note: Make the following adjustment only if typing unit is to be completely readjusted.

To Check
Set up code combination in selector of a character in counterclockwise field of typewriter. Rotate main shaft until carriage drive ball is in rearmost position. Check to see if vertical row containing character is properly selected. Repeat for a character in clockwise field.

Requirement
Typewriter positioning correct in both clockwise and counterclockwise directions.

To Adjust
Place typing unit in stop condition. Open up LEFT SLIDE GUIDEPLATE RESET (Par. 2.59) and RIGHT SLIDE GUIDEPLATE RESET (Par. 2.58) adjustments. Loosen two clamp-screws friction tight. Place either 0.028-inch gauge or TP180587 adjusting tool across end of racks. Hold reset lever in place and position stop plate so that entire slide assembly is tight against racks and tool.

Related Adjustments
Affects

Requirement
With typing unit in stop condition
Min 3 oz—Max 4 1/2 oz
to start print hammer moving.

(Right Side View)

PRINT HAMMER
PRINT HAMMER SPRING
PRINT HAMMER BAIL

RIBBON GUIDE SPRING

To Check
Remove ribbon from ribbon guide. Trip
selector clutch and rotate main shaft until
carriage drive bail is in rearmost position.

Requirement
Min 6 oz—Max 9 oz
to start ribbon guide moving.

(Right Side View)

PRINT HAMMER TRIP LEVER SPRING

Requirement
With typing unit in stop condition
Min 1 oz—Max 2 1/2 oz
to start print hammer trip lever moving.
2.50 Carriage Area (continued)

PRINT TRIP LEVER RELEASE

To Check
Place carriage at left margin. Rotate main shaft until carriage drive ball reaches its rearmost position. Take up play to minimize required clearance.

(1) Requirement
Min 0.040 inch---Max 0.110 inch between print hammer ball and print hammer trip lever.

To Adjust
Loosen print hammer trip lever clampscrew and position print hammer trip lever using pry point. Tighten clampscrew.

(2) Requirement
With carriage approximately 1/2 inch from right margin, clearance between print hammer ball and print hammer trip lever to be within 0.020 inch of (1) Requirement above.

To Adjust
With carriage drive bail right pivot clampscrew friction tight, position right pivot. Tighten clampscrew.

Related Adjustments
Affects
RESET LEVER POSITIONING (Par. 2.52)
FEED PAWL STOP POSITION (Spacing Area) (Par. 2.114)

TYPEWHEEL POSITIONING (Par. 2.48)
2.51 Carriage Area (continued)

FOURTH PULSE LINKAGE POSITIONING

To Check
Place carriage to left margin. With an all marking code combination set up in selector, manually operate the typing unit until the function clutch just trips. Take up play in left rack in a downward direction. Check requirement, then repeat requirement check with carriage at the right margin.

Requirement
Min 0.005 inch---Max 0.055 inch between rotary drive arm and left rack.

To Adjust
Bend pulse lever using pry points.

Related Adjustments
Affected By
CODEBAR RESET LEVER POSITION (Function Area) (Par. 2.28)
REAR RAIL POSITION (Par. 2.46)
2.52 Carriage Area (continued)

RESET LEVER POSITIONING

Requirement
When typing unit returns to stop condition,
racks should be completely reset.

To Adjust
Place carriage in center of typing unit.
Loosen clampscrew and allow positioning
spring to fully reset racks. Tighten
clampscrew.

Related Adjustments

PRINT TRIP LEVER RESET

Requirement
With typing unit in stop condition
Min 0.010 inch --- Max 0.050 Inch
between print hammer bail and print
hammer trip lever.

To Adjust
Loosen clamp nut and position print
reset arm's eccentric pivot with hex
key wrench in hex hole. Tighten
clamp nut.

Note: Keep high part of eccentric
pivot toward front of typing unit.

Related Adjustment
Affected By
PRINT DRIVE LEVER POSITIONING
(Par. 2.47)
PRINT SUPPRESSION LATCHLEVER ENDPLAY

To Check
Take up play in print suppression latchlever towards carriage casting.

Requirement
Print suppression latchlever should fully engage print hammer bail with no binds.

To Adjust
Loosen setscrew with hex key wrench in hex hole, and position collar. Tighten setscrew.
2.55 Carriage Area (continued)

PRINT SUPPRESSION LATCHLEVER RELEASE

To Check
Place print suppression codebar fully up and take up play to minimize required clearance.

Requirement
Min 0.015 inch—Max 0.055 inch
between print suppression latchlever and print hammer bail.

To Adjust
With print suppression latchlever held against print hammer bail, bend print suppression latchlever using pry points.

Note: Use top pry point to make gap larger. Use bottom pry point to make gap smaller.

With typing unit in stop condition

- Min 2-1/2 oz — Max 4 oz to pull feed pawl spring to installed length.

**RIBBON DRIVE LEVER SPRING**

**Requirement**
With typing unit in stop condition

- Min 5-1/2 oz — Max 9 oz to start ribbon drive lever moving.
2.57 Carriage Area (continued)

TYPEWHEEL "HOME" POSITION

To Check
Place typing unit in the stop condition.

(1) Requirement
The typewheel top surface projection should be at its closest position to the platen.

(2) Requirement
The typewheel top surface projection and the clamp nut should be aligned perpendicular to the platen, as gauged by eye.

To Adjust
Loosen clamp nut and position typewheel using TP180588 adjusting tool. Tighten clamp nut.
2. 58 Carriage Area (continued)

RIGHT SLIDE GUIDEPLATE

CLAMP NUT

RIGHT SLIDE GUIDEPLATE RESET

Requirement
With typing unit in stop condition
Min some -- Max 0.015 inch
between right slide guideplate and the right
reset arm when right and left slide guide-
plates are held toward front to make clear-
ance a maximum.

To Adjust
Loosen eccentric stud locknut. Rotate
eccentric stud with hex wrench in hex hole.
Tighten locknut.

Related Adjustments
Affects
PRINT TRIP LEVER RELEASE
(Par. 2.50)

Affected By
PRINT DRIVE LEVER POSITIONING
(Par. 2.47)
2.60 Carriage Area (continued)

Note: Do not perform the following adjustment on typing units equipped with the two-color printing feature. Instead, perform COLOR SELECTION LATCH OVERTRAVEL (Par. 3.21) and RIBBON GUIDE POSITIONING (Two-Color Printing, Part 3, Variations to Basic Adjustments) (Par. 3.22).

RIBBON POSITIONING

To Check
Trip function clutch and rotate main shaft until carriage drive ball is in its rearmost position. Continue rotating main shaft until the right ribbon link, during its downward travel, just contacts the top surface of the ribbon guide.

Requirement
—Min some—Max 0.010 inch
between the left ribbon link and the ribbon guide as gauged by eye.

To Adjust
Loosen left reset arm clamp nut. Position eccentric stud using hex key wrench in hex hole. Tighten clamp nut.

Related Adjustment
Affected By
TYPEWHEEL POSITIONING (Par. 2.48)
LEFT SLIDE GUIDEPLATE RESET (Par. 2.59)

(Left Side View)
2.61 Carriage Area (continued)

**RIBBON POWER LEVER DRIVE**

(1) To Check
Manually operate the typing unit until the carriage drive bail is in the rearmost position. Rotate left ribbon ratchet until the ribbon spool shaft and ribbon spool pin are approximately aligned with the tip of the feed pawl. Seat feed pawl against left ribbon ratchet.

**Requirement**
- Min 0.010 inch -- Max 0.045 inch
- between face of left ribbon ratchet tooth and the corner tip of check pawl.

(2) To Check
Repeat (1) To Check above, except apply all instructions to right ribbon ratchet.

**Requirement**
- Min 0.010 inch -- Max 0.045 inch
- between face of right ribbon ratchet tooth and corner tip of check pawl.

**To Adjust**
Loosen locknut and position the eccentric stud with hex key wrench in hex hole. Tighten locknut.

**Note:** Position eccentric stud to the bottom of its mounting slot when tightening locknut.

---

![Diagram of Carriage Area](image)

(Right Side View)
FORM FEED BELT TENSION - S

Note 1: Check tension only if the form feed belt is suspected of not meeting its requirement.

Requirement
The form feed belt tension should not be too tight or too loose.

To Adjust
Loosen three form feed assembly bracket mounting screws and hook a spring scale under the trip shaft at the latchlever. Position and pull up with a force of 7 pounds and hold. Tighten the three form feed assembly bracket mounting screws in the following order: first, the right front mounting screw; then, the right rear mounting screw, and finally, the left mounting screw.

Related Adjustments Affects

FORM-OUT CONTACT OPERATING BAIL CLEARANCE - S (Par. 2.76)
IDLER POSITION (Platen Area) - S (Par. 2.81)
DETENT POSITION (Platen Area - S (Par. 2.82)
RESET FOLLOWER LEVER — RESET POSITION (Platen Area - S (Par. 2.88)
CAM ZERO POSITION (Platen Area) - S (Par. 2.88)

Note 2: Make certain that the shaft is free by rotating reset follower lever. If necessary, free trip shaft by repositioning the left mounting bracket of the form feed assembly bracket against the form feed assembly bracket.

Note 3: The left mounting screw is located on the left side of the form feed bracket.
CAUTION: DO NOT DISTURB THE CLUTCH SCREWS UNLESS ABSOLUTELY NECESSARY. CLUTCH SCREWS ARE SECURED BY AN ADHESIVE AT THE FACTORY.

CLUTCH SHOE LEVER GAP - S

(1) To Check
Rotate the main shaft until the form feed clutch is in that stop position which brings the flat surface of the adjusting disc to the position illustrated. Disengage (latch) the form feed clutch.

Requirement
- Min 0.015 inch---Max 0.040 inch between the stop-lug and the shoe lever.

To Adjust
Loosen clampscrew and position trip lever. Tighten clampscrew.

Note: Do not make the following adjustment unless (1) Requirement cannot be met. If the clutch screws are disturbed, they must be resealed with an application of TP186171 Glyptal adhesive.

(2) To Check
With form feed clutch conditioned as in (1) To Check, measure and record clearance between shoe lever and stop-lug. Raise trip lever to trip (engage) form feed clutch. Fully seat clutch shoes by applying slight pressure against shoe lever along its normal path of forward travel. Again measure and record shoe lever, stop-lug clearance.

Requirement
Clearance between stop-lug and shoe lever
- Min 0.055 inch---Max 0.085 inch greater when form feed clutch is engaged than when disengaged.

To Adjust
Loosen the two clutch screws friction tight and position adjusting disc. Apply TP186171 Glyptal adhesive to clutch screw threads. Tighten both screws before adhesive dries.

TRIP SHAFT ENDPLAY - S

Requirement
Min some—Max 0.012 inch endplay of the trip shaft.

To Adjust
Loosen clampscrew and position reset follower lever on trip shaft. Tighten clampscrew.

LINE FEED LEVER LINE-UP AND ENDPLAY - S

(1) Requirement
The line feed pawl should engage the flat on the tab of the line feed lever.

(2) Requirement
With all endplay taken up toward the right
Min some—Max 0.012 inch between line feed lever and collar.

(3) Requirement
There must be some clearance between the line feed lever and the main shaft gear.

To Adjust
Loosen collar setscrews and position collars to meet Requirements (1) and (2). Loosen main shaft gear screw and position main shaft gear to meet Requirement (3). Tighten all screws.

Related Adjustment
Affected By
FORM FEED BELT TENSION - S
(Par. 2.62)
2.65 Form Feed Area (continued)

FORM-OUT LEVER OVERTRAVEL - S

To Check
With the form-out code combination (---34---8) set up in selector, rotate the main shaft until the form-out function lever is in its lowermost position.

Requirement
Min 0.010 inch --- Max 0.020 inch clearance between form-out lever and notch of arm.

To Adjust
Loosen screw, hold form-out function lever against its pawl, and position arm using pry points. Tighten screw.

Affected By
RIGHT ROCKER DRIVE (Function Area)
(Par. 2.35)
FORM FEED BELT TENSION - S
(Par. 2.62)

FORM-OUT LEVER SPRING - S

Requirement
With the form-out lever latched
Min 34 oz --- Max 44 oz
to pull form-out lever spring to installed length.

LATCHLEVER ASSEMBLY SPRING - S

Requirement
With the form-out lever latched
Min 9 oz --- Max 11 oz
to pull latchlever assembly spring to installed length.
2.66 Form Feed Area (continued)

**RESET FOLLOWER LEVER SPRING - S**

Requirement
With reset follower lever on low part of cam
Min 12 oz---Max 16 oz
to pull reset follower lever spring to installed length.

![Diagram of reset follower lever mechanism]

**CAM LOBE POSITION - S**

Note: Cam lobes, in addition to the one opposite the three closely spaced grooves, should be adjusted according to the FORM-OUT LEVER — RESET CLEARANCE - S (Par. 2.69 or 2.70) adjustment.

Requirement
The top of the cam lobe should be
Min 0.065 inch---Max 0.070 inch above the low point of the cam.

To Adjust
Loosen screw and position the cam lobe.
Tighten screw.

Related Adjustment
Affects
FORM-OUT LEVER — RESET CLEARANCE - S (Par. 2.69 or 2.70)
2.67 Form Feed Area (continued)

**TRIP LEVER ENGAGEMENT — FORM-OUT - S**

**Note 1:** The following adjustment applies only to early design typing units.

**To Check**

Rotate form feed clutch until a shoe lever just about contacts the trip lever. Hold form-out lever against latching surface of latchlever assembly.

**Note 2:** If the reset lever and/or line feed bail interfere when checking this adjustment,

(a) Loosen reset lever clampscrew and position reset lever so that it does not interfere.

(b) Loosen line feed downstop screw and position downstop to lowermost position.

Position line feed lever so that line feed bail does not interfere.

(1) **Requirement**

Top surface of shoe lever should not be above top surface of trip lever.

(2) **Requirement**

Shoe lever should engage trip lever
- Min 2/3 thickness
of trip lever.

**Note 3:** Check requirements at each of the six shoe levers.

**To Adjust**

Loosen form-out lever screw. Hold form-out lever against latching surface of latchlever assembly and position trip lever using form-out lever pry points. Tighten all screws.

**Related Adjustments**

Affects

TRIP LEVER ENGAGEMENT — LINE FEED - S (Par. 2.71)
FORM-OUT CONTACT OPERATING BAIL CLEARANCE - S (Par. 2.76)

FORM-OUT LEVER — RESET CLEARANCE - S (Par. 2.69 or 2.70)
LINE FEED SELECTION - F (Par. 2.102)
TRIP LEVER ENGAGEMENT — PRELIMINARY - S

Note: This adjustment applies to late design typing units containing the TP185998 nickel plated plate.

To Check
Rotate form feed clutch until a shoe lever is just about to contact the trip lever.

Requirement
Top surface of trip lever should be flush to 0.010 inch below top surface of shoe lever.

To Adjust
Loosen the two adjusting plate screws and position adjusting plate. Tighten both screws.

(Left Side View)
2.69 Form Feed Area (continued)

FORM-OUT LEVER — RESET CLEARANCE - S (Early Design)

To Check
With the typing unit in stop condition, rotate the main shaft until all clutch mounting screwheads are in the vertical position. Place the reset follower lever on the high point of the cam lobe by pushing in on the zeroizing button and rotating the pulley.

(1) Requirement
Min 0.005 inch—Max 0.020 inch
between the latching surface of the arm and the form-out lever.

(2) Requirement
The trip lever and latchlever should have
Min some—Max 0.012 inch
endplay.

To Adjust
Place reset follower lever on high point of cam lobe. Loosen clampscrew friction tight and, using pry point, position the reset lever. Tighten clampscrew.

Related Adjustments
Affects
TRIP LEVER ENGAGEMENT — LINE FEED - S (Par. 2.71)

Affected By
FORM FEED BELT TENSION - S
(Par. 2.62)
CAM LOBE POSITION - S
(Par. 2.66)
FORM-OUT LEVER — RESET CLEARANCE - S (Late Design)

Note: Check (1) To Check only when making a complete readjustment of typing unit.

(1) To Check

With typing unit in stop condition rotate main shaft until all clutch mounting screwheads are in vertical position. Place reset follower lever on low part of cam by pushing in on zeroizing button and rotating pulley. Push down on arm of latchlever assembly to un latch form-out lever.

Requirement
(a) Reset lever should just touch underside of form-out lever extension.
(b) The trip lever and latchlever should have

Min some—Max 0.012 inch

endplay.

To Adjust
Loosen reset lever clampscrew and position reset lever using pry point. Tighten clampscrew.

(2) To Check

With typing unit in stop condition rotate main shaft until all clutch mounting screwheads are in vertical position. Place reset follower lever on high point of cam lobe by pushing in on zeroizing button and rotating pulley.

Requirement

Min 0.005 inch—Max 0.020 inch

between latching surface of arm and form-out lever.

To Adjust

With form-out lever clampscrew friction tight, position form-out lever using pry points. Tighten clampscrew.

Related Adjustments

Affects

FORM FEED BELT TENSION - S (Par. 2.62)
CAM LOBE POSITION - S (Par. 2.66)
2.71 Form Feed Area (continued)

**Note 1:** The following adjustment applies only to early design typing units.

**TRIP LEVER ENGAGEMENT — LINE FEED - S**

To Check

Rotate form feed clutch until a shoe lever just about contacts the trip lever. Place the reset follower lever on the high point of the cam lobe by pushing in on the zeroizing button and rotating the pulley.

(1) Requirement

Top surface of shoe lever should never be above top surface of trip lever.

(2) Requirement

Shoe lever should engage trip lever

Min 2/3 thickness of trip lever.

**Note 2:** Check (1) and (2) Requirement at each of six shoe levers.

To Adjust

Loosen downstop screw and position downstop so that line feed bail positions trip lever to meet (1) and (2) Requirements. Tighten screw.

Related Adjustments

Affects

TRIP LEVER UPSTOP POSITION - S

Note: The following adjustment applies only to early design typing units.

To Check
Rotate main shaft until the flat surface of the form feed clutch adjusting disc is positioned as illustrated. Disengage (latch) the form feed clutch. Resume rotating the main shaft until all the clutch mounting screwheads are in a vertical position. Press down the line feed bail to trip clutch and rotate main shaft until stop-lug is directly under the trip lever.

Requirement
Min 0.020 inch --- Max 0.035 inch between trip lever and stop-lug.

To Adjust
Loosen upstop screws and position upstop. Tighten screws.

Related Adjustment
Affected By
FORM FEED BELT TENSION - S (Par. 2.62)

(Left Side View)
2.74 Form Feed Area (continued)

LINE FEED BAIL SPRING - S

Requirement
Early Design
Min 4 oz---Max 8 oz

Late Design
Min 2 oz---Max 4 oz
to pull line feed bail spring to installed length.

LINE FEED LEVER SPRING - S

Requirement
Early Design
With arm held against downstop
Min 21 oz---Max 35 oz
to start line feed lever moving.

Late Design
Min 27 oz---Max 40 oz
to push arm down until line feed lever contacts pawl.

Note: Late design typing units are not equipped with a downstop.

LINE FEED SELECTION - S

To Check
Place typing unit in stop condition.

Requirement
Single line feed
Min 0.110---Max 0.130 inch
between pawl and line feed lever.

Double line feed
Min zero---Max 0.010 inch
between pawl and line feed lever.

To Adjust
Early Design
While holding rear part of line feed lever against downstop, loosen screw friction tight. Position line feed lever using pry points. Tighten screw.

Late Design
With screw friction tight, position line feed lever using pry points. Tighten screw.

Related Adjustments

LINE FEED PAWL STRIPPING - S
(Par. 2.75)

Page 82
2.75 Form Feed Area (continued)

**LINE FEED PAWL STRIPPING - S**

To Check
Set up the typing unit for single line feed (LINE FEED SELECTION - S (Par. 2.74) adjustment). Push the line feed strip lever down and allow the line feed upstop pawl to assume its normal position against the line feed strip lever. Manually set up the line feed code combination (-2-4---8) in the selector and rotate the main shaft until the line feed pawl just strips off the line feed function lever.

Requirement
The trip lever should fall

- Min on --- Max 0.035 inch
- before stop-lug.

To Adjust
(a) Loosen screw friction tight. Using pry points position line feed strip lever rearward three-fourths of its full adjusting range.
(b) Check LINE FEED SELECTION - S (Par. 2.74) adjustment for single line feed.
(c) Set up line feed code combination (-2-4---8) in selector and rotate main shaft until line feed pawl just strips off line feed function lever.
(d) Check requirement and tighten screw if requirement is met.
(e) If requirement is not met, move line feed function lever slightly toward front of typing unit. Repeat steps (b), (c), and (d). Continue this procedure until requirement is met.

CLAMPSCREW
NORMALLY OPEN CONTACT SPRING
CONTACT BRACKET

FORM-OUT LEVER

(Left Side View)

2) Requirement
With the form-out ball not in contact with the insulator
Min 15 grams --- Max 20 grams to separate break-make contact spring and the normally closed contact spring.

To Adjust
Bend the normally closed contact spring.

FORM-OUT LEVER

(Left Side View)
2.77 Platen Area

**PAPER GUIDE SPRING - S**

Requirement
With paper guides resting on platen
- Min 16 oz --- Max 18 oz
to pull each paper guide spring to installed length.

**PAPER GUIDEPLATE SPRING - S**

Requirement
With a spring scale positioned at middle of paper guideplate
- Min 3-1/2 oz --- Max 7-1/2 oz
to start paper guideplate moving.

![Diagram of paper guide and platen area](right_side_view)

**PAPER GUIDEPLATE SPRING**

**PLATEN KNOB POSITION - S**

Requirement
The platen knob should be fully seated toward the right.

To Adjust
When typing unit is on its subbase and cover is installed, loosen screw and position platen knob. Tighten screw.

![Diagram of platen knob and associated components](front_view)
2.78 Platen Area (continued)

Note 1: If the idler has not previously been backed off, loosen the nut securing the idler post and position idler to low point in slot before making the following adjustment.

PLATEN — HORIZONTAL POSITION - S

(1) To Check
Place the platen knob screw up and permit the detent ratchet pawl to seat in a groove of the detent ratchet. Place the carriage at the left margin and check requirement. Move the carriage to the right margin and again check requirement.

<table>
<thead>
<tr>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Min 0.050 inch---Max 0.065 inch</td>
</tr>
<tr>
<td>between ribbon guide and platen at both left and right margins.</td>
</tr>
</tbody>
</table>

(Left Side View)

(2) To Check
Place carriage to center of platen and rotate platen until maximum clearance is obtained between platen and ribbon guide. Set up E code combination (1-3---78) in the selector. Rotate main shaft until carriage drive ball is in its rearmost position. Push typewheel to the rear until it just touches the platen.

Note 2: The typing unit should not have sprocket forms or ribbon installed.

<table>
<thead>
<tr>
<th>Requirement</th>

(Top View)
2.79 Platen Area (continued)

PLATEN — HORIZONTAL POSITION - S (continued)

To Adjust
Loosen four horizontal positioning screws. Position platen horizontally. Tighten the four horizontal positioning screws.

Related Adjustments
Affects

VERTICAL TYPE ALIGNMENT - S (Par. 2.79)
IDLER POSITION - S (Par. 2.81)
DETENT POSITION - S (Par. 2.82)

Note: If the idler has not previously been backed off, loosen the nut securing the idler post and back off the idler before making the VERTICAL TYPE ALIGNMENT - S (Par. 2.79) adjustment.

VERTICAL TYPE ALIGNMENT - S

Typing units equipped with adjustable vertical drive bail such as TP180606:

1. To Check
   Place carriage to left margin. Set up the E code combination (1-3----78) in the selector and rotate the main shaft until the character is printed.

   Requirement
   When the printed character is examined by eye from top to bottom, the shading should be approximately the same with no overscoring or underscoring.

   To Adjust
   Loosen adjusting screw on vertical drive bail and position the typewheel using pry point.

2. To Check
   Place carriage to right margin. Set up the E code combination (1-3----78) in the selector and rotate main shaft until the character is printed.

   Requirement
   When the printed character is examined by eye from top to bottom, the shading should be approximately the same with no overscoring or underscoring.

   To Adjust
   Loosen the vertical gauge plate screws on the right side of the platen mechanism and back off the vertical gauge plate. Loosen vertical positioning screws on right side. Position the right end of the platen using pry point. Do not twist the platen. After adjusting, position the vertical gauge plate on the right side so that it is resting on its associated bracket. Tighten all screws.
2.80 Platen Area (continued)

VERTICAL TYPE ALIGNMENT - S (continued)

Typing units equipped with nonadjustable vertical drive ball such as TP180526:

To Check
Place paper in typing unit. Set up the E code combination (1-3---78) in the selector and rotate the main shaft until the character is printed. Repeat several times along the length of the platen.

Requirement
When each printed character is examined by eye from top to bottom, the shading should be approximately the same with no overscroting or underscroting.

To Adjust
Loosen the vertical gauge plate screws and back off the vertical gauge plate on each side of the platen mechanism. Loosen four vertical positioning screws and position the platen using pry points. Do not twist the platen. After adjusting, position each vertical gauge plate so that it is resting on the top of its associated bracket. Tighten all screws.

Affects

- IDLER POSITION - S (Par. 2.81)
- DETENT POSITION - S (Par. 2.82)

Affected By

PLATEN - HORIZONTAL POSITION - S (Par. 2.78)
2.81  Platen Area (continued)

ZEROIZING BUTTON - S

Requirement
With a spring scale positioned on zeroizing button
Min 15 oz --- Max 23 oz to start zeroizing button moving.

Note: The following adjustment applies to the tighter of two belts. If there is little
difference in tightness of the two belts, the adjustment applies to the outer belt.

IDLER POSITION - S

To Check
Place a 16 oz spring load to the belt between the idler and the pulley and note the amount
of deflection.

Requirement
Min 0.062 inch --- Max 0.125 inch deflection of belt.

To Adjust
Loosen idler post and position. Tighten idler post.

Related Adjustments
Affects

PLATEN — HORIZONTAL POSITION - S
(Par. 2.78)
VERTICAL TYPE ALIGNMENT - S
(Par. 2.79)
DETERENT POSITION - S

CAUTION: TO PREVENT ELECTRICAL SHOCK EXERCISE CARE WHEN WORKING WITH TYPING UNIT UNDER POWER.

To Check
Set up line feed code combination (-2-4---8) in selector. Place TP185832 armature clip so as to hold armature attracted. Plug in typing unit plugs into proper call control receptacles and apply power to typing unit. Engage codebar clutch to permit a line feed cycle to complete itself under power. Check requirement. Remove all power connections.

(1) Requirement
The pawl should be fully seated with a Max 0.005 inch between pawl and detent ratchet tooth.

(2) Requirement
Min some--Max 0.030 inch between the plate and detent ratchet.

To Adjust
Loosen both setscrews. Use finger pressure to engage and hold pawl firmly in detent ratchet. Depress line feed keytop. Tighten setscrews.

Related Adjustments
Affects
PRINTING LINE POSITION — PRELIMINARY - S (Par. 2.83)
WIRE GUIDE POSITION - S (Par. 2.87)

Affected By

PLATEN — HORIZONTAL POSITION - S (Par. 2.78)
VERTICAL TYPE ALIGNMENT - S (Par. 2.79)
IDLER POSITION - S (Par. 2.81)
2.83 Platen Area (continued)

PRINTING LINE POSITION — PRELIMINARY - S

(1) Requirement
The left sprocket ring pins should be centrally located within the paper guide slot.

To Adjust
Loosen setscrews and position the left sprocket ring.

Note: Do not tighten setscrews until adjustment has been completed.

(2) Requirement
With the setscrews of the left and right sprocket rings in line, place a single sprocket form on the platen with the sprocket form feed holes over the left and right sprocket ring pins. The left and right sprocket ring pins should be in line and centrally located in the sprocket form feed holes.

To Adjust
Loosen setscrews and position the left and/or right sprocket rings as required. Tighten all setscrews.

Related Adjustments
Affects
RIGHT PAPER GUIDE POSITION - S
(Par. 2.85)
WIRE GUIDE POSITION - S(Par. 2.87)

Affected By
DETENT POSITION - S (Par. 2.82)
2.84 Platen Area (continued)

PRINTING LINE POSITION — FINAL - S

To Check
Place a single sheet of sprocket form in platen mechanism. Print the character M several times to establish a printed line.

Note: On nonprinted forms, draw a horizontal line across form connecting bottom of sprocket feed holes.

Requirement
Printed Form
Printed line should be aligned with sprocket form lines.

Nonprinted Form
(a) Printed line should be aligned with drawn line.
(b) Printed line should not touch drawn line.
(c) Printed line should not be more than 1/16 inch above drawn line with no more than 1/32 inch variation along its entire length.

To Adjust
Early Design
Modify (2) Requirement of PRINTING LINE POSITION — PRELIMINARY - S (Par. 2.83)

Late Design (containing adjusting clampscrew)
Loosen clampscrew and position platen. Tighten clampscrew.
2.85 Platen Area (continued)

RIGHT PAPER GUIDE POSITION - S

Requirement
The right sprocket ring pins should be centrally located within the paper guide slot.

To Adjust
Loosen screws and position right paper guide.
Tighten screws.

Related Adjustments
Affects
PAPER GUIDEPLATE CLEARANCE - S (Par. 2.86)
WIRE GUIDE POSITION - S (Par. 2.87)

Affected By
PRINTING LINE POSITION – PRELIMINARY - S (Par. 2.83)
2.86 Platen Area (continued)

**PAPER GUIDEPLATE CLEARANCE - S**

**Requirement**
With no sprocket forms in the platen mechanism
Min 0.008 inch --- Max 0.025 inch
between the platen and the left and right ends of the paper guideplate adjacent to the fingers. Record the two clearances. *

**To Adjust**
Loosen locknut and adjust screw.
Tighten locknut.

**Note 1:** If the adjustment cannot be made as indicated above, remove the platen mechanism from the typing unit. For instructions, see appropriate disassembly and reassembly section. Then, preliminary adjust as follows:

**Preliminary Requirement**
With the screw backed off and no sprocket forms in the platen mechanism
Min zero --- Max 0.012 inch
between the platen and the left and right ends of the paper guideplate — adjacent to the fingers. Record the two clearances. *

**Preliminary Adjust**
Loosen end plate screws friction tight and position end plates. Tighten screws.

**Note 2:** The fingers at both the left and right ends of the platen should be
Min some --- Max 0.015 inch
beyond the recorded gap between the platen and the left and right ends of the paper guideplate. Bend fingers to meet the requirement.

**Note 3:** Replace platen mechanism onto the typing unit. For instructions see appropriate disassembly and reassembly section. Check requirement.

**Related Adjustments**
**Affects**
**PAPER ALARM CONTACT PRESSURE AND GAP** (Paper Controls, Part 3, Variations to Basic Adjustments) - S (Par. 3.29)

**Affected By**
**RIGHT PAPER GUIDE POSITION - S** (Par. 2.85)
2.87 Platen Area (continued)

WIRE GUIDE POSITION - S

To Check
Put a sprocket form containing several lines of printed copy in the unit. Place platen in its detented position with top edge of form feed holes engaging top edge of sprocket ring pins. Place left and right paper guides in contact with their associated sprocket rings.

Requirement
The wire guide should fully contact the sprocket form and should be centrally located between the lines of printed copy with a maximum of 1/2 line overlap.

To Adjust
Loosen setscrew at each end of wire guide. Hold paper guides against their sprocket rings and position wire guide. Tighten both setscrews.

![Diagram showing wire guide and sprocket system]

(A) RESET FOLLOWER LEVER -
RESET POSITION - S

CAUTION: TO PREVENT ELECTRICAL SHOCK EXERCISE CARE WHEN WORKING WITH TYPING UNIT UNDER POWER.

To Check
Set up form-out code combination (-34-8) in selector. Place TP185832 armature clip so as to hold armature attracted. Plug typing unit plugs into proper call control unit receptacles and apply power to typing unit. Engage codebar clutch to permit a form-out cycle to complete itself under power. Check requirement. Remove all power connections.

Requirement
At the end of form-out cycle, reset follower lever should come to rest on flat surface of cam lobe.

To Adjust
Loosen screws and adjust cam. Tighten screws.

Related Adjustments
Affects
CAM ZERO POSITION - S (Par. 2.88)

Affected By
FORM FEED BELT TENSION
(Form Feed Area) - S (Par. 2.62)
IDLER POSITION - S (Par. 2.81)

(B) CAM ZERO POSITION - S

To Check
With cam lobes and index plates located on cam as shown on associated line drawings, place typing unit in stop condition.

Note: Reset follower lever must rest on proper cam lobe to "zero" a sprocket form. Place it in such position by depressing zeroizing button and rotating pulley until reset follower lever rests on cam lobe opposite three closely spaced grooves (on cam) facing toward the front of typing unit.

One cam lobe:

(1) Requirement
With reset follower lever on flat surface of cam lobe and zeroizing button in its right most position

Min some—Max 0.035 inch between bottom surface of pointer and low part of cam.

(2) Requirement
When viewed along line-of-sight shown, tip of pointer should be aligned with index plate aluminized surface, as gauged by eye.

Page 96
2.89 Platen Area (continued)

CAM ZERO POSITION - S (continued)

Two cam lobes:

(1) Requirement
With reset follower lever on flat surface of cam lobe and zeroizing button in its rightmost position
Min some—Max 0.035 inch between bottom surface of pointer and low part of cam.

(2) Requirement
When viewed along line-of-sight shown, tip of pointer should be aligned with index plate aluminized surface, as gauged by eye.

Three cam lobes:

(1) Requirement
With reset follower lever on flat surface of cam lobe A and zeroizing button in its rightmost position
Min some—Max 0.035 inch between bottom surface of pointer and low part of cam.

(2) Requirement
When viewed along line-of-sight shown, tip of pointer should be aligned with flat surface of lobe B, as gauged by eye.

To Adjust
Loosen screw and position pointer. Tighten screw.

IDLER POSITION - S (Par. 2.81)
RESET FOLLOWER LEVER -
RESET POSITION - S (Par. 2.88)
2.90 Spacing Area

**SPACING BELT TENSION**

**Requirement**
With typing unit in stop condition, carriage at left margin, and from 8 to 11 ounces of pressure applied near center of belt.

Min 9/16 inch --- Max 11/16 inch between outer surfaces of belt.

**To Adjust**
Loosen mounting screws and position right pulley bracket. Tighten screws.

**Related Adjustment**
Affects **LEFT MARGIN PRINTING**
(Par. 2.96)

---

(Top View)
2.91 Platen Area (continued)

**LEFT MARGIN POSITION - S**

**To Check**
Place platen knob screw in a vertical position and carriage to the left hand margin. Fully seat piston in dashpot cylinder.

(1) Requirement
Approximately 3/8 inch between edge of sprocket ring pin and V-projection.

(2) Requirement
Min 0.030 inch between the closest sprocket ring pin and ribbon guide.

**To Adjust**
Loosen two dashpot cylinder mounting screws and position dashpot cylinder. Tighten screws.

**Related Adjustments**
Affects
- RIGHT MARGIN POSITION - S (Par. 2.91)
- CARRIAGE RETURN LEVER —
- UNLATCH CLEARANCE (Spacing Area) (Par. 2.95)
- LEFT MARGIN PRINTING (Spacing Area) (Par. 2.96)

**AFFECTED BY**
- PRINTING LINE POSITION — PRELIMINARY - S (Par. 2.83)
- LEFT MARGIN POSITION - S (Par. 2.91)

**RIGHT MARGIN POSITION - S**

**To Check**
Place carriage to the right to the 72nd character position. Hold feed pawl out of engagement with spacing ratchet, so that only check pawl is engaged.

Requirement
Min 0.030 inch between right sprocket ring pin and ribbon guide.

**To Adjust**
Refine LEFT MARGIN POSITION - S (Par. 2.91) adjustment.

**Related Adjustments**
Affects
- PRINTING LINE POSITION — PRELIMINARY - S (Par. 2.83)
- LEFT MARGIN POSITION - S (Par. 2.91)
LEFT MARGIN POSITION - F

Requirement
First printed character approximately 1-3/4 inches from left platen mounting plate.

To Adjust
Align center of typewheel with point of platen 1-3/4 inches from left platen mounting plate. Loosen the two dashpot cylinder mounting screws. Holding carriage in place push dashpot cylinder to right firmly onto piston. Make sure dashpot cylinder is square to piston. Tighten screws.

Related Adjustments
Affects
CARRIAGE RETURN LEVER —
UNLATCH CLEARANCE (Spacing Area)
(Par. 2.95)
LEFT MARGIN PRINTING (Spacing Area)
(Par. 2.96)
2.93 Function Area (continued)

END-OF-LINE LATCH SPRING

Requirement
With typing unit in stop condition, carriage return lever unlatched
Min 1-1/2 oz—Max 3 oz
to start end-of-line latch moving.

LINE LENGTH SELECTION

Automatic Carriage Return — Line Feed.

Requirement
Select either a 69, 72, or 74 character line length.

To Adjust
TP180948 Automatic Codebar: Break off projection(s) as follows:

<table>
<thead>
<tr>
<th>Line Length (Characters)</th>
<th>Projection Removed</th>
</tr>
</thead>
<tbody>
<tr>
<td>69</td>
<td>None</td>
</tr>
<tr>
<td>72</td>
<td>1</td>
</tr>
<tr>
<td>74</td>
<td>1 and 2</td>
</tr>
</tbody>
</table>

TP183495, TP183496, and TP183497 automatic codebars: Use the proper automatic codebar as follows:

<table>
<thead>
<tr>
<th>Line Length (Characters)</th>
<th>Automatic Codebar</th>
</tr>
</thead>
<tbody>
<tr>
<td>69</td>
<td>TP183495</td>
</tr>
<tr>
<td>72</td>
<td>TP183496</td>
</tr>
<tr>
<td>74</td>
<td>TP183497</td>
</tr>
</tbody>
</table>

Note 1: On friction feed typing units using TP180948 automatic codebar, break off projection(s) as instructed in Automatic Carriage Return — Line Feed above so that the end-of-line bell will ring at the proper time.

Note 2: On sprocket feed typing units using TP180948 automatic codebar, do not break off any projections. Leave the automatic codebar as shown on the line drawing so that the end-of-line bell will ring at the proper time.

Note 3: Use either TP180948 or TP183498 automatic codebar and no other on typing units equipped with end-of-line space suppression.

End-of-Line Space Suppression

Requirement
Select the proper line length as follows: With the carriage located one character before the end of a line (for example: character 71 on a 72 character line), rotate the main shaft until the carriage drive ball reaches its rearmost position
Min 0.025 inch—Max 0.100 inch
between end-of-line lever and spacing toggle link.

To Adjust
Early Design
Loosen clampscrew and position belt clamp and extension. Tighten clampscrew.
Late Design
Bend tabs away from belt and position belt clamp. Crimp belt clamp and tabs securely on belt.

Page 101
2.94 Spacing Area (continued)

CARRIAGE BOUNCE

To Check
Place carriage at right margin, manually disengage the check pawl and feed pawl of the spacing mechanism.

Requirement
No pneumatic or mechanical bounce of carriage upon its return.

To Adjust
Loosen clampscrew and position orifice adjusting plate. Tighten clampscrew.

Note: The orifice should never become fully uncovered. If it does become fully uncovered, it is possible that the lobe plate projection may be broken.
CARRIAGE RETURN LEVER — UNLATCH CLEARANCE

(1) To Check
Move carriage to left margin by placing carriage return lever in its forward latched position. Take up all play to minimize the required clearances.

Requirement
Min some—Max 0.050 inch between the carriage return latch and the vertical extension of the carriage return lever.

To Adjust
Loosen clampscrew. Use pry points to position carriage return latch. Tighten clampscrew.

Note: Perform the following check only if the typing unit is being completely readjusted.

(2) To Check
Repeat (1) To Check above.

Requirement
The intermediate unlatch lever should be aligned with the lobe plate projection which most nearly touches it.

To Adjust

Related Adjustments
Affected By
LEFT MARGIN POSITION
(Platen Area) - S (Par. 2.91)
LEFT MARGIN POSITION
(Platen Area) - F (Par. 2.92)

CARRIAGE RETURN ARM SPRINGS

To Check
Place typing unit in stop condition and engage feed pawl and check pawl with spacing ratchet.

(1) Requirement
Min 1 oz—Max 2 oz to start arm moving.

(2) Requirement
Min 1/2 oz—Max 1-1/2 oz to start arm moving.
2.96 Spacing Area (continued)

LEFT MARGIN PRINTING

To Check
Print two or more characters such as RH at left margin and at center of line.

Requirement
Character to character spacing approximately same as center of line as at left margin.

To Adjust
With spacing ratchet clampscrews friction tight, seat piston firmly in the dashpot. Rotate the carriage return arm counterclockwise to permit the feed pawl and check pawl to move toward the spacing ratchet. Position the spacing ratchet so that the check pawl rests on top of a spacing ratchet tooth. Tighten spacing ratchet clampscrews. Recheck Requirement and refine adjustment if necessary.

Related Adjustments
Affects
FEED PAWL TRAVEL (Par. 2.118)

SPACING BELT TENSION (Par. 2.90)
LEFT MARGIN POSITION
(Platen Area) - S (Par. 2.91)
LEFT MARGIN POSITION
(Platen Area - F (Par. 2.92)
2.97 Function Area (continued)

**END-OF-LINE BELL SIGNAL - S**

*Note:* This requirement applies only to sprocket feed typing units equipped with TP180948 automatic codebar.

**Requirement**
The automatic codebar projections must not be removed.

**To Adjust**
Replace codebar.

---

**MARGIN BELL BELLCRANK CLEARANCE**

*Note:* This adjustment applies only to typing units equipped with a margin bell bellcrank.

**To Check**
Place carriage to left margin. Take up play of margin bell bellcrank in a clockwise direction.

**Requirement**
- Min 0.004 inch
- Max 0.020 inch

**To Adjust**
Bend margin bell bellcrank using TP180993 bending tool.
CODEBAR GUIDE POSITION

To Check
Place typing unit in stop condition and manually operate the typing unit until the no. 1 blocking lever is in its lowest position.

(1) Requirement
No. 1 codebar centrally located in guide slot, as gauged by eye.

(2) Requirement
No. 1 blocking lever should engage the full thickness of no. 1 codebar.

To Adjust

(Left Front View)
FORM LENGTH SELECTION - S

To Check
The control cam of the platen drive mechanism normally will come with two cam lobes. This causes sprocket forms to feed out one-half the basic form length.

Requirement
A longer form length.

To Adjust
Line up the pointer with the aluminized surface of the index plate. Remove and discard the cam lobe which is located in the other side of the control cam opposite the reset follower lever.

Note: A listing of gears which provide various form feed lengths can be found in the appropriate parts section.
2.100 Platen Area (continued)

**PLATEN — HORIZONTAL POSITION - F**

(1) To Check

Place the flat on the left side of the platen up so that it is horizontal to the base casting. Place the carriage at the left margin and check requirement. Move the carriage to the right margin and again check requirement.

Requirement

- Min 0.050 inch --- Max 0.065 inch between ribbon guide and platen at both left and right margins.

(2) To Check

Place carriage to center of platen and rotate platen until maximum clearance is obtained between platen and ribbon guide. Set up the E code combination (1-3---78) in the selector. Rotate main shaft until carriage drive ball is in its rearmost position. Push typewheel to the rear until it just touches the platen.

**Note:** The typing unit should not have paper or ribbon installed.

Requirement

Typewheel should not touch inside of either ribbon guide.

To Adjust

Loosen four horizontal positioning screws. Position platen horizontally. Tighten positioning screws.

Related Adjustment

**Affects**

**LINE FEED STRIPPER PLATE CLEARANCE - F**

(Par. 2.109)

---

2.101 Platen Area (continued)

VERTICAL TYPE ALIGNMENT - F

For typing units equipped with adjustable vertical drive bail such as TP180606:

(1) To Check
   Place paper and ribbon in unit. Place carriage to left margin. Set up the E code combination (1-3---78) in the selector and rotate the main shaft until the character is printed.

   Requirement
   When the printed character is examined by eye from top to bottom, the shading should be approximately the same with no overscoring or underscoring.

   To Adjust
   Loosen adjusting screw on vertical drive bail and position the typewheel using pry point. Tighten adjusting screw.

(2) To Check
   Place carriage to right margin. Set up the E code combination (1-3---78) in the selector and rotate main shaft until the character is printed.

   Requirement
   When the printed character is examined by eye from top to bottom, the shading should be approximately the same with no overscoring or underscoring.

   To Adjust
   Loosen vertical positioning screws on right side. Position the right end of the platen using pry point. Do not twist the platen. Tighten positioning screws.

For typing units equipped with nonadjustable vertical drive bail such as TP180526:

To Check
   Place paper in typing unit. Set up the E code combination (1-3---78) in the selector and rotate the main shaft until the character is printed. Repeat several times along the length of the platen.

   Requirement
   When each printed character is examined by eye from top to bottom, the shading should be approximately the same with no overscoring or underscoring.

   To Adjust
   Loosen four vertical positioning screws. Position the platen using pry points. Do not twist the platen. Tighten positioning screws.

Related Adjustments
Affects

LINE FEED UPSTOP BRACKET POSITION - F
(PAR. 2.108)
PRESSURE ROLLER CLEARANCE - F
(PAR. 2.110)
LINE FEED SELECTION - F

(1) Requirement
Upstop stud should be at bottom of slot for single line feed or at top for double line feed.

To Adjust
Loosen clamp nut. Position upstop stud. Tighten clamp nut.

Note: The following requirement applies only to typing units equipped with operator-controlled line feed feature containing TP185788 shift lever.

(2) Requirement
Same as (1) Requirement above.

To Adjust
Place TP185788 shift lever in upper detent for single line feed or in lower detent for double line feed.
2.103 Platen Area (continued)

DETENT POSITION - F

To Check
Place typing unit in single line feed condition.

Requirement
When operated by finger pressure, line feed pawl should fully seat in platen ratchet without interference from teeth.

To Adjust
Early Design (typing units equipped with TP181030 bracket)
Loosen clamp nut (1). Position platen detent pawl pivot. Tighten clamp nut.

Late Design (typing units equipped with TP185796 bracket)
Loosen clamp nuts (2) and (3). Position platen detent pawl. Tighten clamp nuts.

Affected By
VERTICAL TYPE ALIGNMENT - F
(Par. 2.101)

Note: This adjustment is affected by VERTICAL TYPE ALIGNMENT - F (Par. 2.101) only when equipped with TP180526 nonadjustable vertical drive ball.

LINE FEED PAWL SPRING - F

Requirement
With typing unit in stop condition
Min 3/4 oz---Max 1-3/4 oz
to start line feed pawl moving.
LINE FEED DRIVE LINK SPRING — VERTICAL — \( F \)

Requirement
With typing unit in stop condition
Min 6 oz --- Max 9 oz
to start line feed drive link moving.

LINE FEED BLOCKING LEVER SPRING — \( F \)

To Check
Set up any code combination in the selector except the line feed code combination and rotate the main shaft until the function ball is at highest point. Hold line feed drive link away from line feed blocking lever.

Requirement
Min 2-1/2 oz --- Max 4-1/4 oz
to start line feed blocking lever moving.

LINE FEED DRIVE LINK SPRING — HORIZONTAL — \( F \)

Requirement
With typing unit in stop condition
Min 5-1/2 oz --- Max 8-1/2 oz
to start line feed drive link moving.
LINE FEED DRIVE ARM CLEARANCE - F

To Check
Place carriage to center of platen. Manually operate typing unit and set up line feed code combination (-2-4---8) in selector. Rotate main shaft until function bail is at highest point. Take up play to make clearance between line feed blocking lever and line feed drive arm a minimum.

Requirement
Min some--Max 0.010 inch
between line feed drive arm and line feed blocking lever.

To Adjust
Loosen clampscrew. Position line feed drive arm using pry point. Tighten clampscrew.

LEFT ROCKER DRIVE (Function Area) (Par. 2.33)
VERTICAL TYPE ALIGNMENT - F (Par. 2.101)

Note: This adjustment is affected by VERTICAL TYPE ALIGNMENT - F (Par. 2.101) only when equipped with TP180526 nonadjustable vertical drive bail.
LINE FEED UPSTOP BRACKET POSITION - F

To Check
Place typing unit in stop condition. Trip function clutch by lifting its trip lever. Rotate main shaft until function ball is at highest point. Push down on line feed drive link to engage and latch line feed blocking lever.

Requirement
Min 0.020 inch - Max 0.040 inch between line feed drive arm and line feed blocking lever.

To Adjust
Loosen mounting screws and position line feed upstop bracket. Tighten mounting screws.

Related Adjustments
Affected By
VERTICAL TYPE ALIGNMENT - F
(Par. 2.101)
LINE FEED DRIVE ARM CLEARANCE - F
(Par. 2.105)

Note: This adjustment is affected by VERTICAL TYPE ALIGNMENT (Par. 2.105) only when equipped with TP180526 nonadjustable vertical drive ball.
2.107 Platen Area (continued)

LINE FEED DRIVE LINK POSITION - F

To Check
Place the carriage to the center of the platen. Place the flat on left side of platen up and horizontally to base casting, and set up the line feed code combination (-2-4---8) in the selector. Rotate main shaft until function bail reaches its lowest point while noticing the motion supplied by the drive arm of the function rocker shaft to the line feed pawl.

(1) Requirement
The motion supplied by the drive arm of the function rocker shaft to the line feed pawl should be adequate to rotate the platen the required amount.

To Adjust
Loosen line feed stripper plate clamp screw and back off line feed stripper plate (see LINE FEED STRIPPER PLATE CLEARANCE adjustment). Loosen two clampscrews and use pry points to position line feed drive link so that line feed pawl indexes platen one tooth and platen detent pawl seats fully in ratchet. Tighten clampscrews.

Note: Hold platen detent pawl away from ratchet and rotate main shaft until function bail is in its lowest position. Lower platen detent pawl into its seat between two ratchet teeth. The platen should barely move.

DETENT POSITION - F (Par. 2.103)
LINE FEED DRIVE ARM CLEARANCE - F
(Par. 2.105)

PLATEN DETENT PAWL SPRING - F

Requirement
Early Design
Min 24 oz—Max 30 oz

Late Design
Min 31 oz—Max 37 oz
to start platen detent pawl moving.
LINE FEED PAWL DOWNSTOP POSITION - F

To Check
Place the flat on left side of platen up and horizontal to base casting. Set up the line feed code combination (-2-4--8) in the selector. Rotate main shaft until function bail reaches its lowest position. Take up play of platen in left end plate toward the rear.

Requirement
With platen detent pawl fully seated in ratchet
Min some---Max 0.010 inch
Between back of line feed pawl and its downstop.

To Adjust
Loosen downstop clamp nut. Position downstop. Tighten clamp nut.

**PAPER GUIDE SPRINGS - F**

Requirement
With scale at either the left or right end of paper guide
Min 1-1/2 oz—Max 3-1/2 oz
to start paper guide moving.

**PAPER STRAIGHTENER BAIL SPRING - F**

Requirement
With scale at center of paper straightener ball
Min 1 oz—Max 3 oz
to start paper straightener bail moving.

**PAPER GUIDEPLATE SPRINGS - F**

Requirement
With pressure lever released
Min 3/4 oz—Max 1-3/4 oz
to start paper guideplate moving.

*Note:* Check each of two springs.
2.112 Platen Area (continued)

COPYHOLDER WIRE POSITION - F

(1) Requirement
The copyholder wire should fall somewhere between two lines of printed copy, not obscuring more than 1/2 the height of either line.

To Adjust
Loosen four mounting screws. Position copyholder wire. Tighten screws.

(2) Requirement
After raising and releasing, the copyholder wire should return and rest against the platen at its center with a maximum of 0.020 inch between platen and copyholder wire at both the left and right ends.

To Adjust
Bend copyholder wire.
2.113 Platen Area (continued)

PLATEN ENDPLAY - F

Note: This adjustment applies only to typing units equipped with TP185816 adjusting screw.

To Check
Position platen against the left end plate.

Requirement
Min 0.002 inch—Max 0.015 inch
between the TP185816 adjusting screw and the right end of the platen.

To Adjust
Loosen the locknut. Position platen against the left end plate. Position the
TP185816 adjusting screw. Tighten locknut.

SPACE SUPPRESSION LEVER CLEARANCE — PRINTING

To Check
Move carriage to the center of platen. Set up the @ code combination (----78) in the selector. Rotate the main shaft until the front vertical surface of the right end of feed pawl is aligned with notch on space suppression lever.

(1) Requirement
With all play taken up to minimize gap
Min 0.005 inch—Max 0.040 inch
between right end of feed pawl and tip of notch on the space suppression lever.

(2) Requirement
The position of high part of eccentric should be toward the rear of the typing unit.

To Adjust
Loosen eccentric clampscrew friction tight.
Position eccentric. Tighten eccentric clampscrew.

KEYBOARD FOLLOWER LEVER

Note 2: Do not lift typing unit while holding any part of the selector mechanism. Note the proper method for lifting the typing unit. This method is described in the appropriate disassembly and reassembly section.

TRIP LEVER ENGAGEMENT

Note 3: The answer-back control lever and reader trip lever should not be touching their respective stop bail adjusting tabs when checking this adjustment.

Note 4: Perform (1) To Check only on late design units containing the TP182262 trip lever.

(1) To Check
Disengage (latch) distributor clutch. Depress any nonfunction keytop to unlatch distributor clutch. If necessary, loosen screw and position bracket to obtain clearance between bracket and trip lever. Tighten screw. Rotate clutch to align upper edges of shoe lever and trip lever.

Requirement
Min 0.015 inch—Max 0.035 inch between shoe lever and trip lever.

To Adjust
Remove answer-back drum. Use TP180993 bending tool to bend center adjusting tab. Replace answer-back drum.

CAUTION: TO PREVENT ELECTRICAL SHOCK EXERCISE CARE WHEN WORKING WITH TYPING UNIT UNDER POWER.

(2) To Check
Operate typing unit under power. Place keyboard universal lever in latched position.

Requirement
Shoe lever should be
Min flush—Max 0.015 inch
beyond rearmost surface of trip lever.

To Adjust
Early Design (without TP182262)
Remove answer-back drum. Use TP180993 bending tool to bend center adjusting tab. Replace answer-back drum.

Late Design (with TP182262)
Loosen screw friction tight and position bracket. Tighten screw.

Related Adjustments
Affects
TRIP LEVER CLEARANCE — (Answer-Back Area) (Par. 3, 08)

(Appropriate Keyboard Section)
RECEIVING MARGINS

To Check
Set up test situation using typing unit and Signal Distortion Test Set to check selector receiving margins.

Requirement
Obtain minimum selector receiving margins as follows:

<table>
<thead>
<tr>
<th>SPEED</th>
<th>RANGE ZERO DISTORTION</th>
<th>OVERALL BIAS</th>
<th>END DISTORTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>All Speeds</td>
<td>No Requirement</td>
<td>35 Percent*</td>
<td>33 Percent*</td>
</tr>
</tbody>
</table>

*At same range scale setting.

To Adjust
Refine ARMATURE SPRING (Par. 2.18) and, if necessary, refine ARMATURE BRACKET POSITION (Par. 2.17) and/or BELT TENSION (Par. 2.26) adjustments.

Note: The refinement of the ARMATURE BRACKET POSITION (Par. 2.17) or BELT TENSION (Par. 2.26) adjustment need not be performed unless the refinement of the ARMATURE SPRING (Par. 2.18) adjustment fails to bring about the minimum selector receiving margins.

Related Adjustments
Affected By

FINAL PRINTING ALIGNMENT

Note: When typing unit is adjusted as instructed on previous pages, quality of printed copy should be good. However, minor readjustments may be necessary

To Check
Print TH at various points along length of printing line.

Requirement
Quality of printed characters should be good.

To Adjust
Use the following guide in making readjustments.

Shading of top and bottom of characters not equal and/or underscoring or overscoring of characters ---
---refine VERTICAL TYPE ALIGNMENT - FS (Platen Area) (Par. 2.101 - F and 2.79 - S) adjustment by either moving typewheel vertically (late design) or moving platen toward portion of light shading (early design).

Left character T or poor quality ---
---using left pry points, refine TYPEHEEL POSITIONING (Par. 2.48) adjustment.

Right character H of poor quality ---
---using right pry points, refine TYPEHEEL POSITIONING (Par. 2.48) adjustment.

Characters spread out ---
---refine TYPEHEEL POSITIONING (Par. 2.48) adjustment by moving plate forward.

Characters run together ---
---refine TYPEHEEL POSITIONING (Par. 2.48) adjustment by moving plate rearward.

Both characters of light shading on left side ---
---refine TYPEHEEL "HOME" POSITION (Par. 2.57) adjustment by rotating wheel clockwise as viewed from top.

Both characters of light shading on right side ---
---refine TYPEHEEL "HOME" POSITION (Par. 2.57) adjustment by rotating wheel counterclockwise as viewed from top.
3. VARIATIONS TO BASIC ADJUSTMENTS

3.01 Answer-Back Area

Note 1: On typing units equipped for two-color printing, perform BLOCKING LINK CLEARANCE (Two-Color Printing Area) (Par. 3.18) in place of the following adjustment.

Note 2: The answer-back trip lever adjusting tab should clear the control lever before proceeding with the following adjustments.

BLOCKING LINK CLEARANCE

To Check
Disengage (latch) distributor and function clutches, engage the answer-back blocking lever fully in indent of answer-back blocking pawl. Take up play in the answer-back blocking pawl toward the front of the typing unit.

Requirement
- Min some---Max 0.020 inch between the blocking link and tab on answer-back blocking pawl.

To Adjust
Bend adjusting tab on blocking follower lever with TP180993 bending tool.
TRIP LEVER OVERTRAVEL AND ARMATURE GAP

To Check
With the answer-back drum fully detented in its home position, trip distributor clutch and rotate main shaft until the pointer of the distributor brush holder is in line with the intersection of the conductor path and the stop segment. Control lever must be clear of answer-back to trip lever adjusting tab — if necessary, bend tab forward to provide clearance. Place armature in its attracted position, and take up play toward rear of typing unit.

1. Requirement
   Min 0.006 inch — Max 0.015 inch
   between the end of armature extension and end of answer-back blocking latch.
   To Adjust
   Loosen armature extension mounting screw friction tight. Position the armature extension using pry points. Tighten screw.

2. Requirement
   Front end of armature extension should be vertically centered between the top and bottom surfaces of the answer-back blocking latch as gauged by eye.
   To Adjust

CHARACTER SUPPRESSION CONTACT WIRE GAP (Par. 3.14)

Affected By
TRIP MAGNET POSITION (Par. 3.02)
DRUM POSITION (Par. 3.07)
CONTROL LEVER SPRING — HORIZONTAL

To Check
Place control lever out of indent and on high part of answer-back drum. Rotate main shaft until feed lever is moved by cam roller to its lowest point. Hold stop bail away from control lever.

Requirement
Min 6 oz—Max 8 oz to start control lever moving.

BLOCKING FOLLOWER LEVER SPRING

Requirement
With distributor clutch disengaged (latched)
Min 1 oz—Max 2-1/4 oz to start blocking follower lever moving.
CONTROL LEVER SPRING — VERTICAL (Early Design)

Note: This adjustment applies to early design typing units with TP180843 trip lever.

Requirement
With distributor clutch tripped and blocking follower lever on high part of blocking cam
Min 7-1/2 oz—Max 10-1/2 oz to start control lever moving.

BLOCKING LATCH SPRING

Requirement
With distributor clutch disengaged (latched)
Min some*—Max 3/4 oz to start blocking latch moving.

* By feel

ARMATURE SPRING

To Check
Trip distributor clutch. Rotate main shaft until blocking follower lever is on high part of blocking cam and armature is in its un-attracted position.

Requirement
Min 2-1/2 oz—Max 3-1/2 oz to start armature moving.

(Right Side View)
3.05 Answer-Back Area (continued)

TRIP LEVER SPRING

To Check
Disengage (latch) distributor clutch. Manually trip armature. Position stop bail so that its adjusting tab does not interfere with control lever. Hold armature in its attracted position.

Requirement
Min 3 oz --- Max 4-1/2 oz

to start trip lever moving.

CONTROL LEVER SPRING — VERTICAL
(Late Design)

Note: This adjustment applies to late design typing units with TP182276 trip lever.

To Check
Disengage (latch) distributor clutch. Manually rotate the answer-back drum until control lever is on high part of answer-back drum. Position stop bail so that its adjusting tab does not interfere with control lever.

Requirement
Min 6 oz --- Max 8 oz

to start control lever moving.

(Right Side View)
3.06 Answer-Back Area (continued)

**FEED PAWL SPRING**

Requirement
With distributor clutch disengaged (latched)
- Min 1/2 oz --- Max 1-1/4 oz
to start feed pawl moving.

**(Right Side View)**

**DETENT SPRING**

Requirement
- Min 8 oz --- Max 12 oz
to start detent moving.

**(Right Side View)**

**CONTACT WIRE SPRING**

Requirement
- Min 1 oz --- Max 2 oz
to start contact wire moving away from common terminal.

**(Right Side View)**
3.07 Answer-Back Area (continued)

**DRUM POSITION**

To Check
Engage lower extension of control lever in indent of answer-back drum and locate detent lever between ST and 20 rows on answer-back drum. Disengage (latch) distributor clutch. Hold the feed pawl out of engagement with the answer-back drum and manually move the upper extension of the control lever toward the rear of the typing unit while checking to see that the answer-back drum is fully detented. Move the upper extension of the control lever toward the front of the typing unit while noticing any clockwise movement of the answer-back drum.

**Note 1:** For instructions on coding the answer-back drum, see the appropriate installation section.

**Note 2:** If necessary to insure clearance between the feed lever adjusting tab and the control lever, bend the feed lever adjusting tab toward the front of the typing unit.

(1) **Requirement**
Barely perceptible clockwise movement of answer-back drum from its fully detented position when upper extension of control lever is moved toward front of typing unit.

(2) **Requirement**
The axis of the answer-back drum should be parallel to the trip pivot shaft as gauged by eye.

To Adjust
Loosen HERE IS adjusting bracket clampscrew and answer-back bracket clampscrew. With answer-back block mounting screws friction tight, position block to meet requirements. Tighten screws.

Related Adjustments

(Diagram: Left Side View)

(Diagram: Right Side View)
3.10 Answer-Back Area (continued)

FEED PAWL POSITION

(1) To Check
With answer-back drum fully detented in its home position, disengage (latch) distributor clutch. Manually trip distributor clutch and rotate main shaft until the cam roller is adjacent to high part of feed lever. With feed pawl positioned fully within answer-back ratchet, take up all play to minimize required clearance.

Requirement
Min some---Max 0.005 inch
between feed pawl and rear face of no. 16 drum tooth.

Note: The minimum requirement is met if the feed pawl spring repositions the pawl after the pawl has been raised and then released above answer-back drum.

To Adjust
With adjusting nut and screw friction tight, position feed pawl. Tighten nut and screw.

(2) To Check
Push the top of the control lever toward the rear of typing unit and simultaneously rotate the main shaft. Observe the operation of the feed pawl.

Requirement
While operating, the feed pawl should be centrally located on feed ratchet teeth.

To Adjust
Bend feed lever just below feed pawl.

Related Adjustments
Affects
FEED LEVER POSITION (Par. 3.09)

3.11 Answer-Back Area (continued)

"HERE IS" BELLCRANK POSITIONING

(1) To Check
With answer-back drum fully detented in its home position, trip distributor clutch and manually rotate main shaft until cam roller is positioned above the top edge of feed lever. Depress HERE IS key with a force of from 20 oz to 24 oz.

Requirement
Early design typing units — HERE IS adjusting bracket does not have a stop projection:
Min 0.015 inch—Max 0.030 inch
overtravel between feed pawl and face of answer-back drum feed ratchet tooth of row 17.

Late design typing units — HERE IS adjusting bracket has a stop projection:
Min 0.010 inch—Max 0.040 inch
overtravel between feed pawl and face of answer-back drum feed ratchet tooth of row 17.

(2) To Check
With the answer-back drum fully detented in its home position and HERE IS key in its unoperated position, disengage (latch) distributor clutch.

Requirement
Some clearance between tip of HERE IS key and bellcrank.

To Adjust
With clampscrew friction tight, position HERE IS adjusting bracket using pry points. Tighten clampscrew.

TRIPBAIL POSITIONING

(1) To Check
Place the typing unit in stop condition. Trip function clutch and rotate main shaft until the function bail is in its highest position. Push the answer-back function pawl down until its notch is engaged by its function lever. Trip the distributor clutch and continue to rotate the main shaft until the answer-back function pawl reaches its lowest point of travel.

Note: The feed pawl will move back to pick up the next tooth on the answer-back drum feed ratchet.

With the feed pawl centered on the answer-back drum feed ratchet, take up play in feed pawl toward the rear.

Requirement
Min 0.010 inch—Max 0.040 inch
overtravel between feed pawl and face of answer-back drum feed ratchet of row 17.

(2) To Check
With typing unit in stop condition, set up the code combination for the answer-back call character in the selector. Rotate the main shaft until the answer-back function pawl moves forward to its selected position. Observe the forward movement of the answer-back function pawl.

Requirement
Answer-back function pawl must move forward freely to its selected position without hesitation.

To Adjust
Loosen clampscrew friction tight. Position answer-back adjusting bracket using pry slots. Tighten clampscrew.

3.16 Function Box Switches (Function Area)

CONTACT ASSEMBLY POSITION

(1) To Check
Set up code combination in selector that is to operate the function pawl associated with a contact arm and rotate the main shaft until the function bail is in its highest position.

Requirement
Min 0.010 inch—Max 0.020 inch
between the contact arm and the contact at the closest point as illustrated.

(2) To Check
Place typing unit in stop condition.

Requirement
Min some
clearance between the function pawl and the tip of the contact arm.

To Adjust
With two clampscrews friction tight, position the contact assembly on the function casting. If necessary, bend the upper contact. Tighten clampscrews.

Note: For (1) To Check, be sure that the contact arm lines up with and is in contact with the function pawl.

(Left Side View)
3.17 Receive-Only Sets (Distributor Area)

**KEYBOARD ADJUSTING BRACKET POSITION**

To Check
Trip distributor clutch and rotate main shaft until cam roller is on high part of keyboard follower lever. Place keyboard lever in its lowest position.

Requirement
Min some---Max 0.025 inch between keyboard follower lever and cam roller as gauged by eye.

To Adjust
Loosen clampscrew friction tight. Move adjusting bracket using pry points. Tighten clampscrew.
3.18 Two-Color Printing (Answer-Back Area)

**BLOCKING LINK CLEARANCE**

To Check
Place typing unit in stop condition, engage the distributor and codebar clutches. Rotate the main shaft until the adjusting tab is on the high part of the blocking cam and codebar reset bail is in its highest position. Take up all clearances to make gap between R codebar and blocking link a minimum.

Requirement
Min 0.050 inch---Max 0.070 inch between R codebar blocking extension and tip on blocking link.

To Adjust
Bend adjusting tab with TP180993 bending tool.

Related Adjustment
Affects
COLOR SELECTION LATCH OVERTRADEL (Par. 3.21)

(Right Side View)

Note: If the typing unit is equipped with the answer-back trip magnet mechanism (TP182045), the TRIP LEVER OVERTRADEL AND ARMATURE GAP (Answer-Back Area) (Par. 3.02) adjustment should be made at this time. If necessary, the answer-back trip lever adjusting tab should be bent forward to clear the control lever before proceeding with the remaining answer-back adjustments.
3.19 Two-Color Printing (Carriage Area) (continued)

**RIBBON GUIDE SPRING**

To Check
Place typing unit in the stop condition, engage the function clutch. Rotate main shaft until ribbon guide rises to its highest position.

**Requirement**
- Min 5 oz -- Max 6 oz
to start ribbon guide moving downward.

**LATCH BELLCRANK SPRING**

**Requirement**
With typing unit in stop condition
- Min 1/2 oz -- Max 1 oz
to start latch bellcrank moving.
3.20 Two-Color Printing (Carriage Area) (continued)

**TYPEWHEEL RETURN SPRING**

Requirement
With typing unit in stop condition
Min 5 oz --- Max 8 oz
to move typewheel to platen.

(Right Side View)
3.21 Two-Color Printing (Carriage Area) (continued)

COLOR SELECTION LATCH OVERTRAVEL

To Check
Place typing unit in the stop position. Trip the distributor clutch and rotate main shaft until carriage drive ball is at its rearmost position.

Requirement
Min 0.010 inch --- Max 0.030 inch
between drive arm extension and latch bellcrank.

To Adjust
Loosen screws and position latch bellcrank. Tighten screws.

Related Adjustment
Affected By
BLOCKING LINK CLEARANCE (Par. 3.18)

(Right Side View)
3.22 Two-Color Printing (Carriage Area) (continued)

**RIBBON GUIDE POSITIONING**

To Check
Print any four characters such as illustrated. Place the typing unit in stop condition.

Requirement
Min 0.010 inch—Max 0.020 inch
between the top horizontal edge of the ribbon and lower edge of the printed characters as gauged by eye.

To Adjust
Loosen screws and position reset link using pry points. Tighten screws.

(Front View)

(Right Side View)
SECTION 574-122-700TC

3.23  Auxiliary Contact Assembly — TP183594 (Main Shaft Area)

TIME DELAY CONTACT BRACKET POSITION

To Check
Place the typing unit in the stop condition.
Engage the function clutch and rotate the main shaft until the cam follower is on high part of its cam.

Requirement
Max 0.010 inch separation of front contact spring from stiffener.

To Adjust
Loosen mounting screw and position bracket. Tighten screw.

FRONT CONTACT SPRING

Requirement
With typing unit in stop condition
Min 4-1/2 oz—Max 6 oz
to just separate the front contact spring from the stiffener.
3.24 Print-Nonprint (Function Area)

Note: The following adjustment applies only to typing units equipped with manual print-nonprint feature.

NONPRINT FUNCTION LEVER CLEARANCE

To Check
Push the nonprint codebar to the right until trip armature latches the latch bellcrank. Rotate mainshaft until function lever is at its highest point of travel. Take up all play to minimize the required clearance.

Requirement
Min 0.005 inch—Max 0.025 inch between the function lever in slot 4 in function casting and time of nonprint codebar.

To Adjust
Loosen clampscrews and adjust length of trip armature using pry point. Tighten clampscrews.

Related Adjustments
Affects
Solenoid Bracket Position (Par. 3.26 or 3.27)
Release Magnet Overtravel (Par. 3.28)
3.25 Print-Nonprint (Function Area) (continued)

Note: The following adjustment applies only to typing units equipped with the manual print-nonprint feature.

---

**NONPRINT CODEBAR SPRING**

To Check
Place nonprint codebar in its unoperated position.

Requirement
--- Min 3 oz—Max 3-1/2 oz
To pull spring to installed length.
3.26 Print–Nonprint (Function Area) (continued)

Note: The following adjustments apply only to typing units equipped with the automatic print-nonprint feature — for units containing the manual print-nonprint feature, refer to Par. 3.27.

SOLENOID BRACKET POSITION

To Check
Place plunger to position it assumes when solenoid is energized. Hold plunger seated in that position.

Requirement
Min 0.006 inch—Max 0.012 inch between trip armature and latch bellcrank.

To Adjust
Loosen mounting screws and position solenoid using pry points. Tighten mounting screws.

Related Adjustment
Affected By
NONPRINT FUNCTION LEVER CLEARANCE
(Par. 3.24)

ARMATURE SPRING

To Check
With release magnet de-energized, place plunger to position it assumes when solenoid is energized. Hold plunger seated in that position.

Requirement
Min 2-1/2 oz—Max 3-1/2 oz to start armature moving.
3.27 Print-Nonprint (Function Area) (continued)

Note: The following adjustment applies only to typing units equipped with the manual print-nonprint feature — for units containing the automatic print-nonprint feature, refer to Par. 3.26.

SOLENOID BRACKET POSITION

To Check
Place plunger to position it assumes when solenoid is energized. Hold plunger seated in that position.

Requirement
Min 0.010 inch—Max 0.020 inch between the function lever in slot 4 in function casting and tine of nonprint codebar.

To Adjust
Loosen mounting screws and position solenoid using pry points.
3.28  Print-Nonprint (Function Area) (continued)

RELEASE MAGNET OVERTRAVEL

To Check
Hold armature against release magnet pole face.

Requirement
Min 0.010 inch---Max 0.015 inch between trip armature and latch bellcrank.

To Adjust
Loosen clamp nut and position trip armature by turning adjusting screw. Tighten clamp nut.

Note: The following adjustments apply only to typing units equipped with the automatic print-nonprint feature.

Related Adjustment
Affected By
NONPRINT FUNCTION LEVER CLEARANCE (Par. 3.24)

LATCH BELLCRANK SPRING

To Check
Hold armature against pole face of release magnet.

Requirement
Min 2 oz---Max 3 oz to start typing unit suppression codebar moving.
3.29 Paper Controls (Paper Alarm Control Area)

(A) PAPER ALARM CONTACT PRESSURE AND GAP - S

(1) Requirement
With the paper alarm lever not in contact with insulator

Min 15 grams -- Max 20 grams
to separate the contacts of the break-make contact spring and normally open contact spring.

(C) PAPER LEVER SPRING - S

To Check
Place a single sheet of a sprocket form between the paper alarm lever and paper guideplate. Hold the sprocket form taut over the cutout in the paper guideplate and allow the paper alarm lever to rest on the sprocket form. Position a spring scale over the paper alarm lever at the rectangular opening in the paper guideplate.

Requirement
Min 1 oz -- Max 1-1/2 oz
to move paper alarm lever from sprocket form.

(2) Requirement
With the paper alarm lever not in contact with insulator

Min 0.010 inch -- Max 0.020 inch
between the contacts of the break-make contact spring and the normally open contact spring.

To Adjust
Bend normally closed contact spring.

Related Adjustment
Affected By
PAPER GUIDEPLATE CLEARANCE
(Platen Area, Part 2, Basic Adjustments) - S (Par. 2.86)

(B) PAPER ALARM CONTACT LEVER CLEARANCE - S

To Check
Place a single sheet of a sprocket form between the paper alarm lever and paper guideplate. Hold the sprocket form taut over the cutout in the paper guideplate.

Requirement
Min 0.005 inch -- Max 0.030 inch
between insulator and paper alarm lever.

To Adjust
Loosen screw and position bracket. Tighten screw.

Related Adjustment
Affected By
PAPER GUIDEPLATE CLEARANCE
(Platen Area, Part 2, Basic Adjustments) - S (Par. 2.86)

### 1. GENERAL

1.01 This section provides adjustment and maintenance information for the 33 tape reader. It is reissued to provide exclusive coverage of the 33 tape reader and to update the section. Since this is a general revision, marginal arrows ordinarily used to indicate changes and additions are omitted.

1.02 In the adjustments covered in this section, location of clearances, position of parts, and point and angle of scale applications are illustrated by line drawings. Tools required to perform adjustments are contained in TP185830 Tool Kit and are listed in Maintenance Tool Section 570-005-800.

Note: An adjustment must be performed even if the accompanying illustration is not an exact duplication of the adjustment area.

1.03 The sequence in which the adjustments appear should be followed when a complete readjustment of the tape reader is undertaken. No adjustment should be undertaken without completely understanding the procedure and the requirements. Read a procedure all the way through before making an adjustment or checking a spring tension.

Note 1: Be sure to check all related adjustments (Paragraph 1.07).

Note 2: Remove all electric power before checking or performing adjustments.

1.04 References to left, right, front, rear, etc consider the tape reader to be viewed from a position where the feed wheel faces up and the lid latch is located to the viewer’s right. Orientation references to the clutch trip area consider the armature extension to be facing up with the contact bracket pry points located to the viewer’s right.
1.05 When a procedure calls for using pry points or slots to make an adjustment, place a screwdriver between the points or in the slots and pry parts in the proper direction.

1.06 If parts are removed from the tape reader to facilitate making an adjustment, be sure that they are replaced.

Note: Recheck any adjustment that may have been affected by the removal of parts.

1.07 Related adjustments are listed with some of the adjustment text and are primarily intended to aid in troubleshooting the equipment. As an example, suppose that in searching for a trouble it is discovered that the BLOCKING PAWL (Tape Reader Area) adjustment does not meet its requirement. Under "Related Adjustment," it is indicated that this adjustment is affected by the DETENT LEVER (Tape Reader Area) and FEED PAWL (Tape Reader Area) adjustments. Check these to see if either is the cause of the trouble. Also, note that certain adjustments affect other adjustments. For example, see the DETENT LEVER (Tape Reader Area) adjustment. Note that this adjustment affects the FEED PAWL (Tape Reader Area) and BLOCK PAWL (Tape Reader Area) adjustments. If the former adjustment is changed, check the latter adjustments.

1.08 The spring tensions specified in this section are indications, not exact values. Therefore, to obtain reliable readings, it is important that spring tensions be measured by spring scales placed in the positions shown on pertinent line drawings. Springs that do not meet their requirements should be replaced by new ones. Only those springs that directly affect the operation of the tape reader are measured, however, others may be measured indirectly in the
process. If this is the case and the requirement is not met, replace the springs one at a time, starting with the indicated spring, until the requirement is satisfied.

Note 1: Use spring scales which are listed in the Maintenance Tool Section 570-005-800.

Note 2: Spring tensions may be checked in any sequence.

1.09 Certain adjustments specify that an armature is to be in its attracted position prior to checking a requirement. This refers to an armature's position when it is magnetically attracted to its magnet core.

CAUTION: THE TAPE READER FEED MAGNET OPERATES UNDER HIGH VOLTAGE. PRECAUTIONARY MEASURES SHOULD BE TAKEN WHENEVER POWER TO THE TAPE READER IS TURNED ON. HIGH VOLTAGE WILL CONTINUE UNTIL APPROXIMATELY 10 SECONDS AFTER THE POWER PACK HAS BEEN DISCONNECTED.

1.10 When inserting a tape that has originated from the tape punch, into a tape reader, allow some slack in the tape between the punch and the reader. This is done to close the reader tape lid.

Note: Do not place the control lever directly into the FREE position while the tape reader is operating under power. Place the control lever into the STOP position and wait until after the tape reader has stopped before moving it beyond the STOP position and into the FREE position. The FREE position of the control lever is used to facilitate the insertion and/or removal of paper tape from the tape reader.
1.11 All adjustments in the "Clutch Trip Area" should be started with the typing unit in the stop condition. It is in the stop condition when the selector armature is in its attracted (frontward) position and all clutches are disengaged.

1.12 To place the typing unit in the stop condition, hold the selector armature in its attracted (frontward) position. Rotate the main shaft clockwise (as viewed from the left) until all clutches are fully disengaged as instructed in 1.13 below.

1.13 When disengaged, a clutch is latched so that a shoe lever is held in its stop position by a trip lever while a corresponding latch lever is seated in a notch of the clutch disc. This allows the clutch shoes to release their tensions on the clutch drum. With all clutches disengaged, the main shaft will turn freely without any clutch shoes dragging.

Note 1: The clutch stop position is that position where a shoe lever contacts a trip lever.

Note 2: If the shaft is turned by hand, a clutch will not fully disengage upon reaching a stop position. Where an adjustment procedure requires disengagement, rotate the clutch to a stop position, apply a screwdriver to the associated stop-lug, and push the clutch disc in the normal direction of main shaft rotation until the corresponding latch lever seats in its clutch disc notch.

Note 3: The distributor clutch will not disengage unless the answer-back drum is in its home position, which is the position where the control lever is fully detented into the indent on the answer-back drum.

1.14 There are two areas in which tape reader adjustments and spring tensions are found. As aids in locating the areas, Figures 1 and 2 are provided. They indicate the areas as follows:

<table>
<thead>
<tr>
<th>Area</th>
<th>Figure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clutch trip</td>
<td>2</td>
</tr>
<tr>
<td>Tape reader</td>
<td>1</td>
</tr>
</tbody>
</table>

1.15 General Maintenance Principles:

(a) Lubrication instructions and intervals are given in the appropriate lubrication sections.

(b) To maintain the operational effectiveness of the equipment, it is recommended that certain parts be replaced at uniform intervals. Below is the recommended overhaul interval as recorded in typing unit operating hours.

<table>
<thead>
<tr>
<th>Operating Speed (words per minute)</th>
<th>Overhaul Interval</th>
<th>Estimated Service Life</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>1500 hrs*</td>
<td>4500 hrs*</td>
</tr>
</tbody>
</table>

*Typing unit operating hours

Replacement parts are available in overhaul maintenance kits.
2. BASIC UNIT

2.01 Clutch Trip Area

MAGNET CORE

Requirement
Magnet core slot to be perpendicular to magnet bracket pivot surface as gauged by eye.

To Adjust
With clutch trip coil mounting screw loosened, position clutch trip coil. Tighten screw.

TRIP MAGNET

Requirement
Magnet bracket to be positioned on base casting post as far forward and to the left as possible.

To Adjust
Position magnet bracket with three mounting screws loosened. Tighten screws.

Related Adjustments
Affects
TRIP LEVER OVERTRAVEL (Clutch Trip Area)
CONTACT GAP (Clutch Trip Area)
ARMATURE EXTENSION (Clutch Trip Area)
TRIP MAGNET (See appropriate typing unit section.)
SECTION 574-124-700TC

2.02 Clutch Trip Area (continued)

TRIP LEVER OVERTRAVEL

To Check
Trip distributor clutch by momentarily holding armature in its attracted position. Rotate main shaft until cam roller is on high part of reader trip lever cam. Take up play in the armature toward the rear and release. Position the reader trip lever to the center of the armature extension.

Requirement
Min 0.010 inch --- Max 0.030 inch between the end of armature extension and latching surface of reader trip lever.

To Adjust
With armature extension mounting screw loosened friction tight, position armature extension using pry point. Tighten screw.

Related Adjustment Affects
CONTACT GAP (Clutch Trip Area)

TRIP MAGNET ARMATURE SPRING

Requirement
With armature in its unattracted position and cam roller on high part of reader trip lever cam
Min 2 oz --- Max 4 oz to start armature moving.

Note: The requirement for readers containing busy and reset switches is
Min 2 oz --- Max 3 oz

(Armature Extension)

ARMATURE EXTENSION

ARMATURE

BASE CASTING POST

CLUTCH TRIP COIL

MAGNET BRACKET

PRY POINT

ARMATURE EXTENSION

(Top View)

(Top View)

Page 6
2.03 Clutch Trip Area (continued)

ARMATURE EXTENSION

To Check
Place typing unit in stop condition. Hold armature in attracted position and rotate main shaft until a clearance of

- Min Some --- Max 0.040 inch

exists between end of armature extension and reader trip lever.

Requirement

- Min Some --- Max 0.030 inch

between the armature extension and reader trip lever at its closest point.

To Adjust
Loosen and use armature extension adjusting screw and locknut to position armature extension. Tighten adjusting screw and locknut.

To Check
Trip distributor clutch by momentarily holding armature in its attracted position. Rotate main shaft until upper edge of shoe lever is in line with upper edge of trip lever.

Requirement

- Min 0.015 inch --- Max 0.035 inch

between shoe lever and trip lever.

To Adjust
Bend stop bail adjusting tab with TP180993 bending tool.

Related Adjustments

- TRIP LEVER ENGAGEMENT (See the appropriate typing unit section.)
- CLUTCH STOP BAIL (See the appropriate typing unit section.)

Note: Keep plane of adjusting tab parallel to axis of trip pivot shaft.
2.04 Clutch Trip Area (continued)

To Check
Place distributor clutch in stop condition with armature in its unattracted position. Position the reader trip lever to the center of the armature extension.

Requirement
Min 0.025 inch --- Max 0.040 inch between contacts.

To Adjust
With contact bracket mounting screws loosened friction tight, position contact bracket using pry points. Tighten screws.

Related Adjustment
Affected By
TRIP LEVER OVERTRAVEL (Clutch Trip Area)
2.05 Clutch Trip Area (continued)

FEED MAGNET CONTACT SPRING

Requirement
With reader trip lever insulator out of contact with swinger spring
Min 2 oz --- Max 3 oz
to open contacts.

To Adjust
Bend swinger spring near the contact insulators with spring bender TP110445.
Tape Reader Area

DETENT LEVER

Requirement
With the control lever in FREE position, tips of sensing pins must be centrally located in the code holes of tape which has an all-marking code combination punched in it.

Note: If the tape reader is operating under power, do not push the control lever beyond the STOP position until the tape reader has stopped.

To Adjust
With detent bracket mounting screw friction tight, position detent bracket by means of pry points. Tighten screw.

Related Adjustments
Affects
FEED PAWL (Tape Reader Area)
BLOCKING PAWL (Tape Reader Area)

DETENT LEVER SPRING

Requirement
Min 3-1/2 oz
Max 5-1/2 oz to start detent lever moving.
2.07 Tape Reader Area (continued)

**FEED PAWL** (Adjustment with Gauge TP183103)

To Check
Place armature in unattracted position. Visually check to see if there is some clearance between the blocking pawl and ratchet tooth. If not, provide clearance. See **BLOCK PAWL** (Tape Reader Area) adjustment.

**UPSTOP SPRING**

Requirement
With armature spring post removed from its slot in magnet bracket
Min 14 oz --- Max 20 oz to start upstop bushing moving.

**RATCHET TOOTH**

**DETENT LEVER**

**MAGNET BRACKET**

**UPBRACKET PRY POINT**

**FEED PAWL**

**BLOCKING PAWL SPRING**

Requirement
With the armature in its unattracted position and control lever in START position.
Min 2 oz --- Max 3-1/2 oz to start blocking pawl moving.

**BLOCKING PAWL SPRING**

**BLOCKING PAWL BRACKET**

**ARMATURE SPRING POST**

**UPSTOP SPRING**

**UPSTOP BUSHING**

**ARMATURE**

(Left Side View)

(Rear View)
2.08 Tape Reader Area (continued)

FEED PAWL (Continued from preceding page.)

To Adjust
With armature in attracted position and two upstop bracket mounting screws friction tight, insert gauge TP183103 between upstop bracket and shoulder of upstop shoulder screw. Position upstop bracket so that it lies flat on gauge. Tighten upstop bracket mounting screws. With armature in unattracted position and three magnet bracket mounting screws friction tight, position magnet bracket by means of pry point. Tighten magnet bracket mounting screws.

Note: For tape readers with vibration damper plate TP183136, tighten magnet bracket mounting screws A and B first. Then, rotate the vibration damper plate until the upper finger presses firmly on contact block extension. Finally, tighten magnet bracket mounting screw C.

Related Adjustments
Affects
- BLOCKING PAWL (Tape Reader Area)
- SENSING PIN (Tape Reader Area)

Affected By
- DETENT LEVER (Tape Reader Area)
2.09 The Tape Reader Area (continued)

FEED PAWL (Adjustment without
Gauge TP183103)

(1) To Check
Place armature in attracted position
and loosen two upstop bracket mounting
screws so that the upstop bracket does
not limit the feed pawl motion.

Requirement
Min 0.020 inch --- Max 0.045 inch
between feed pawl and ratchet tooth and
a total of six ratchet teeth between feed
pawl and detent lever.

To Adjust
With three magnet bracket mounting
screws friction tight, position magnet
bracket using pry point.

(2) To Check
Place armature in unattracted position.
Visually check to see if there is some
clearance between the blocking pawl
and ratchet tooth. If not, provide
clearance. See BLOCKING PAWL
(Tape Reader Area) adjustment. Place
upstop bracket flat against downstop
buffer.

Requirement
Min Some --- Max 0.008 inch
between feed pawl and ratchet tooth at
point of least clearance.

To Adjust
With two upstop bracket mounting screws
friction tight, position upstop bracket
using upstop bracket pry point. Tighten
screws.

Note 1: If the some of 0.008 inch
requirement cannot be met, refine
requirement (1) until it is met.

Note 2: For tape readers with vi-
bration damper plate TP183131,
tighten magnet bracket mounting
screws A and B first. Then, rotate
the vibration damper plate until the
upper finger presses firmly on
contact block extension. Finally
tighten magnet bracket mounting
screw C.

Recheck Requirements (1) and (2) and
refine, if necessary.

Related Adjustments
Affects
BLOCKING PAWL (Tape Reader Area)
SENSING PIN (Tape Reader Area)

Affected By
TRIP LEVER OVERTRAVEL (Tape
Reader Area)

(Left Side View)
2.10 Tape Reader Area (continued)

BLOCKING PAWL

To Check
Place armature in unattracted position. Check to see that there is some clearance between feed pawl and ratchet tooth. If not, provide clearance. See FEED PAWL (Tape Reader Area) adjustment.

Requirement
Min Some --- Max 0.010 inch at point of least clearance between blocking pawl and ratchet tooth.

Note: When a tape winder is used
Min Some --- Max 0.003 inch at point of least clearance between blocking pawl and ratchet.

To Adjust
With blocking pawl bracket mounting screw loosened friction tight, position blocking pawl bracket using pry point. Tighten mounting screw.

Related Adjustments Affected By
DETENT LEVER (Tape Reader Area)
FEED PAWL (Tape Reader Area)

(Left Side View)

(Rear View)
2.11 Tape Reader Area (continued)

**SENSING PIN SPRING**

**Requirement**
- With armature in its attracted position:
  - Min 1-1/2 oz --- Max 2-3/4 oz
to position sensing pin flush with top plate.

**SENSING PIN**

**Requirement**
- With armature in unattracted position, the
tip of all sensing pins shall be:
  - Min Flush --- Max 0.015 inch
  - below top surface of top plate.

**To Adjust**
- With two sensing pin guide adjusting screws
  loosened friction tight, position sensing pin
guide using pry points. Tighten screws.

**Related Adjustment**
**Affected By**
- **FEED PAWL** (Tape Reader Area)

---

**Note:** This adjustment may be made by using
the thin-slotted end of gauge TP183103. To
check the above minimum requirement (Flush),
hold the gauge flat against the top plate in
back of the sensing pins and move it forward
against sensing pins. If any sensing pin is
deflected by the gauge, then the above mini-
imum requirement is not met. The sensing pin
pin guide must be lowered. To check the
above maximum requirement (0.015 inch),
hold the gauge directly above the sensing
pins and measure the clearance. Adjust, if
necessary, as indicated above.
2.12 Tape Reader Area (continued)

CONTACT WIRES* SPRING

To Check
Place control lever in START position and fully depress tape-out pin.

Requirement
Min 1-1/4 oz --- Max 2-1/4 oz
to start each contact wire* moving

Note 1: Tape readers without automatic reader control: Place the
control lever in START position.

(1) Requirement
With tape-out pin in its fully up position,
Min 0.015 inch --- Max 0.025 inch
between control (or tape-out) contact wires* and contact.

(2) Requirement
With tape in reader and reader lid closed,
Min 0.005 inch
clearance between the tape-out pin extension and tape-out contact wire.

To Adjust
Bend control (or tape-out) contact wires* between the contact and the tape-out pin
extension with bending tool TP180993.

*Note 2: The location of the contact wires is shown below:
2.13 Tape Reader Area (continued)

Note: The following adjustment applies only to tape readers with automatic reader control.

START CONTACT WIRES

Requirement
With the control lever in the neutral position (resting in a position midway between START and STOP positions)
--- Min 0.035 inch --- Max 0.055 inch
between the start contact wires and their contact.

To Adjust
With the control lever in the FREE position, bend start contact wires between contact block and control lever cam surface with bending tool TP180993.
2.14 Tape Reader Area (continued)

**TAPE LID SPRING**

Requirement
With tape lid closed
Min 16 oz --- Max 22 oz
to pull spring to its installed length.

**TAPE LID LATCH HANDLE**

Requirement
(1) With tape lid closed
Min 0.005 inch --- Max 0.030 inch
between top plate and latch spring.
(2) Equal clearance between latch and tape lid.

To Adjust
With mounting screw friction tight, position latch handle vertically. Tighten screw.
2.15  Tape Reader Area (continued)

TIGHT-TAPE LEVER SPRING

Requirement
With the tape lid closed
- Min 1 oz --- Max 2-1/4 oz
to start tight-tape lever moving.

CONTROL DETENT SPRING

Requirement
Place control lever in STOP position,

Note: For tape readers with automatic reader control, place the control lever in the neutral position.
- Without* Min 5 oz --- Max 9 oz
- With* Min 12 oz --- Max 16 oz
to start control detent lever moving.

*Automatic reader control.

(Tight-Tape Lever)

CONTROL DETENT LEVER

CONTROL LEVER

CONTROL DETENT SPRING

CONTROL LEVER - NEUTRAL POSITION
(LEFT SIDE VIEW)

(Sensing Contact Wire Spring)

Requirement
With armature in its attracted position
- Min 3/4 oz --- Max 1-3/4 oz
to start contact wire moving.

(Contact Wire)

(Left Side View)
2.16 Tape Reader Area (continued)

**TAPE-OUT PIN SPRING**

Requirement
With tape lid open and control contact wires held away from the tape-out pin extension
Min 1-3/4 oz --- Max 3-3/4 oz to start tape-out pin moving.

Note: On tape readers equipped with automatic reader control, hold the control tape-out contact wires away from the tape-out pin extension.

**ARMATURE SPRING**

Requirement
With armature in its unattracted position
Min 24 oz --- Max 37 oz to start spring post moving. Measure each end individually.

**Figure**: Left Side View and Top View of Tape Reader Area.
2.17 Tape Reader Area (continued)

LATCH SPRING

Requirement
With tape lid open
Min 7 oz --- Max 13 oz
to start latch spring moving.

TAPE LID

TOP PLATE

LATCH SPRING

MOUNTING SCREW

(Front View)
Note: The following adjustment applies to tape readers with early design bases.

**READER MOUNTING BRACKET (Early Design)**

**Requirement**
There shall be equal clearance on three sides between top plate and tape reader cover.

**To Adjust**
With three mounting screws friction tight, position tape reader base. Tighten screws.
2.19 Tape Reader Area (continued)

Note: The following adjustment applies to tape readers with late design bases.

READER MOUNTING BRACKET (Late Design)

Requirement
(1) Top plate to be
Min Flush --- Max 0.030 inch
below cover.
(2) Equal clearance between top plate and tape reader cover on three sides.

To Adjust
With four adjusting screws and locking screw (L) loosened and mounting bracket
lying flat on tape reader base, position tape reader. Run two adjusting screws
(X) up until requirement is approximately met. Tighten locking screw friction
tight. Run two adjusting screws (Y) up until requirement is approximately met.
Refine all four adjusting screws. Tighten locking screw (L).
3. **VARIATIONS TO THE BASIC UNIT**

3.01 **Tape Reader Area**

*Note:* The following adjustment applies to readers equipped with timing contacts.

**RESET AND BUSY SWITCH TIMING**

1. Requirement (Preliminary)
   The busy and reset switches should be centered in their bracket slots.

2. Requirement (Final)
   With the sensing pins fully down, the reset switch should be closed and the busy switch should be open. With the sensing pins fully up (energized position), the reset switch should be open and the busy switch should be closed.

---

To Adjust
—With switch mounting screws friction tight, position switches up or down. Tighten screws.

### 1. GENERAL

1.01 This section provides adjustment and maintenance information for the 33 tape punch. It is reissued to provide exclusive coverage of the 33 tape punch and to update the section. Since this is a general revision, marginal arrows ordinarily used to indicate changes and additions are omitted.

1.02 Figure 1 shows the tape punch area where the punch adjustments and spring tension checks are made.

1.03 In the adjustments covered in this section, location of clearances, position of parts, and point and angle of scale applications are illustrated by line drawings. Requirements and procedures are set forth in the several texts that accompany the line drawings. Required tools are included in TP185830 Maintenance Tool Kit and are listed in Section 570-005-800.

1.04 The sequence in which the adjustments appear should be followed when a complete readjustment of the tape punch is undertaken. No adjustment should be undertaken without completely understanding the procedure and the requirements. Read a procedure all the way through before making an adjustment or checking a spring tension.
1.05 References to left, right, front, or rear, etc consider the tape punch to be viewed from a position where the tape guide assembly faces up and the backspace lever is located to the viewer's left.

1.06 When a procedure calls for using pry points or slots to make an adjustment, place a screwdriver between the points or in the slots and pry parts in the proper direction.

1.07 If the tape punch is removed from the typing unit to facilitate making an adjustment and then replaced, recheck any adjustment that may have been affected. Also, if parts are removed from the tape punch to facilitate making an adjustment, be sure that they are replaced. Recheck any adjustment that may have been affected by the removal of the parts.

1.08 The spring tensions specified in this section are indications, not exact values. Therefore, to obtain reliable readings, it is important that spring tensions be measured by spring scales placed in the positions shown on pertinent line drawings. Springs that do not
meet their requirements should be replaced by new ones. Only springs that directly affect the operation of the tape punch are measured; however, others may be measured indirectly in the process. If this is the case and the requirement is not met, replace the springs one at a time, starting with the indicated spring, until the requirement is satisfied.

Note 1: Use spring scales which are listed in the Maintenance Tools Section 570-005-800.

Note 2: Spring tensions may be checked in any sequence.

1.09 Certain adjustments require that the tape punch be either "on" or "off." These conditions can be identified as follows:

(a) "Off" condition

(1) Manual (Punch) Controls: A tape punch is "off" when the control lever is in its clockwise detented position and fully engages the drive post.

(2) Automatic (Punch) Controls: An "automatic" tape punch is "off" when the associated typing unit is in the stop condition and the On-Off bail assembly is latched by the latch ball.

Note 1: If the automatic punch is equipped with the "On Lock" option, the "unlock" button must be depressed to enable the On-Off bail assembly to be latched.

Note 2: If the automatic punch is equipped with the interlock mechanism, the nonprint codebar must be in its unoperated position — solenoid not energized.

(b) "On" condition

(1) Manual (Punch) Controls: A tape punch is "on" when the control lever is detented in its counterclockwise posi-
tion and the drive post is fully engaged by the drive link.

(2) Automatic (Punch) Controls: An automatic tape punch is "on" when the On-Off bail assembly is in its unlatched counterclockwise position.

1.10 With the tape punch and typing unit assembled together, all adjusting procedures should be started with the typing unit in the stop condition. It is in the stop condition when the selector armature is in its attracted (frontward) position and all clutches are disengaged.

Note: When the typing unit is in the stop condition and the punch is "on," the tape punch is said to be in the off position.

1.11 To place the typing unit in the stop condition, hold the selector armature in its attracted (frontward) position. Rotate the main shaft clockwise (as viewed from the left) until all clutches are fully disengaged as instructed in 1.12.

1.12 When disengaged, a clutch is latched so that a shoe lever is held in its stop position by a trip lever while a corresponding latchlever is seated in a notch of the clutch disc. This allows the clutch shoes to release their tension on the clutch drum. With all clutches disengaged, the main shaft will turn freely without any clutch shoes dragging.

Note 1: The clutch stop position is that position where a shoe lever contacts a trip lever.

Note 2: If the shaft is turned by hand, a clutch will not fully disengage upon reaching a stop position. To fully disengage a clutch, rotate the clutch to a stop position, apply a screwdriver to the associated stop-lug, and push the clutch disc in the normal direction of main shaft rotation until the corresponding latchlever seats in its clutch disc notch.

Note 3: The distributor clutch will not disengage unless the answer-back drum is in its home position, which is the position where the control lever is fully detented into the indent on the answer-back drum.
1.13 Manual Operation: To manually operate the typing unit, place it in the stop condition as instructed in 1.11. Momentarily permit the armature to move to its unattracted (rearward) position to trip the selector clutch. Slowly rotate the main shaft clockwise (as viewed from the left) until all push levers have moved under their respective selector levers. Using a spring hook, strip the push levers from under the selector levers corresponding to the spacing elements of the code combination to be set up. Then continue to rotate the main shaft until the proper condition is set up or the character is cleared through the typing unit.

1.14 The selector levers are numbered 1, 2, 3, 4, 5, 7, 6, and 8 from left to right. To set up the character Y, for example, whose code combination is 1-45-78, strip the push levers from the 2, 3, and 6, selector levers.

1.15 The relationship between code levels, sensing levers, and codebar extensions is illustrated in Figure 2.

1.16 General Maintenance Principles

(a) Lubrication instructions and intervals are given in the appropriate lubrication sections.

(b) To maintain operating effectiveness of the equipment, it is recommended that certain parts be replaced at uniform intervals. Indicated below is the recommended overhaul interval as recorded in typing unit operating hours.

<table>
<thead>
<tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

*Typing unit operating hours

Replacement parts are available in overhaul maintenance kits.
2. BASIC UNIT

2.01 Tape Punch Area

Note 1: These adjustments are to be made only if these areas have been disturbed during disassembly.

Note 2: Prior to making adjustments, remove the chad extension. Reassemble when the adjustments are completed.

PAWL UPSTOP ASSEMBLY — PRELIMINARY

Requirement
The pawl upstop assembly should be positioned so that it is vertical or within 2° clockwise from vertical, as gauged by eye.

To Adjust
Loosen the screw which secures the pawl upstop assembly post to the tape punch casting and position pawl upstop assembly. Tighten screw.

(Left Side View)

TAPE NUDGER

Note 3: This adjustment applies only to tape punch castings which have an elongated tape nudge post mounting hole.

Requirement
The post should be in its most rearward position.

To Adjust
Loosen the screw which secures the post to the tape punch casting and position the post. Tighten screw.

(Left Side View)
2.02 Tape Punch Area (continued)

FEED WHEEL RATCHET AND PAWL — PRELIMINARY

Requirement

The plate should be in middle of slot located in feed pawl arm, as gauged by eye.

To Adjust

Loosen screw and adjust plate using pry points.
Tighten screw.

(Left Side View)
2.03 Tape Punch Area (continued)

STRIPPER BAIL UPSTOP

Requirement
With the tape punch "off" and all pawls in their uppermost position, the stripper bail should clear bottom corner of the stripping surface of lowermost pawl by Min some---Max 0.012 inch

To Adjust
With all pawls in their uppermost position, loosen screw and rotate bracket to meet requirement. Tighten screw.
2.04  Tape Punch Area (continued)

Note 1: For the adjustments which follow, the tape punch should be mounted to the typing unit. For instructions, see section titled "33 Tape Punch, Disassembly and Reassembly."

Note 2: The following Tape Punch Area adjustments must be made in sequence: TAPE PUNCH DRIVE, PUNCH PENETRATION, PAWL UPSTOP ASSEMBLY — FINAL, and FEED WHEEL RATCHET AND PAWL — FINAL. Prior to making the above adjustments, check or make the following Tape Punch Area adjustments: PAWL UPSTOP ASSEMBLY — PRELIMINARY, TAPE NUDGER, FEED WHEEL RATCHET AND PAWL — PRELIMINARY, and STRIPPER BAIL UPSTOP.

TAPE PUNCH DRIVE

To Check
With no tape in the tape punch and with the tape punch "on," manually rotate the main shaft until the stripper bail is in its most forward position. Take up rear roller play toward rear and tape nudge play in a clockwise direction.

Requirement
Min 0.030 inch—Max 0.080 inch
at point of least clearance between rear roller and tape nudge.

To Adjust
Loosen adjusting screw and use pry points to position plate. Tighten screw.
2.05 Tape Punch Area (continued)

PUNCH PENETRATION

To Check
With the tape punch "on," set up an all-marking code combination in the selector. Manually rotate the main shaft until the stripper bail is in its most forward position.

Requirement
Min 0.017 inch--Max 0.037 inch between bottom surface of holder and top surface of any lever.

To Adjust
With code lever post mounting screw (and support plate nut on late design units) friction tight, position post within the elongated base hole (and support plate hole — late design units). Tighten screw and nut.
2.06 Tape Punch Area (continued)

PAWL UPSTOP ASSEMBLY — FINAL

To Check
With the tape punch "on," set up an all-marking code combination in the selector. Manually rotate the main shaft until the stripper ball is in its rearmost position.

Note 1: For tape punches equipped with the answer-back blocking option or automatic controls, use the following "To Check" procedure:

To Check
With the tape punch "on," set up the code combination in the selector that will cause the special feature to operate. Manually rotate the main shaft until the stripper ball is in its rearmost position. Check requirement (1). Then, set up an all-marking code combination in selector. Manually rotate the main shaft until the stripper ball is in its rearmost position. Check requirement (2).

(1) Requirement
Min 0.005 inch—Max 0.020 inch between the leftmost sensing lever (Figure 2) and its associated pawl.

Note 2: For tape punches equipped with automatic controls, the requirement will be checked between the second from the left sensing lever (Figure 2) and its associated pawl.

Note 3: There should also be some clearance between the rightmost sensing lever (Figure 2) and its associated pawl.

Note 4: "Some clearance" can be determined by feeling movement when pressing down on a sensing lever while holding its assembled lever in its most downward position.

(2) Requirement
Some clearance between the feed lever and its associated pawl and each sensing lever and its associated pawl.

(Left Side View)

To Adjust
Loosen the screw which secures the pawl upstop assembly post to the tape punch casting. Provide proper clearance by rotating the pawl upstop assembly. Tighten screw. Recheck requirement (1) above and refine if necessary. Remake STRIPPER BAIL UPSTOP (Tape Punch Area) adjustment.

CAUTION: EXERCISE CARE AND SEE THAT THE PLATE OF THE PAWL UPSTOP ASSEMBLY ALWAYS GUIDES THE PAWL AND LEVER SIMULTANEOUSLY. AVOID ROTATING PLATE IN A COUNTERCLOCKWISE DIRECTION FROM ITS VERTICAL POSITION IF POSSIBLE.
2.07 Tape Punch Area (continued)

FEED WHEEL RATCHET AND PAWL — FINAL

To Check
With no tape in the tape punch and with the tape punch "on,"
set up an all-marking code combination in the selector.
Manually rotate the main shaft until the stripper bail is in its
rearmost position. Take up all play in stripper bail toward the front.

Requirement
With feed wheel ratchet in its fully detented position
Min some—Max 0.005 inch
between the feed pawl and feed wheel ratchet tooth.

To Adjust
Loosen screw and position plate w/bushing using pry points. Tighten screw.
Backspace feed wheel ratchet one full revolution, one tooth at a time, using
backspace lever. Check each tooth to see if the requirement is met. Gauge
by eye. Readjust where necessary.

Note: On late designed units equipped with
a support plate, remove the two mounting
screws and nut. Then move the support
plate out of the way to facilitate checking
this adjustment.
TEN CHARACTERS PER INCH

Note: From left to right, with the smooth side of TP156011 gauge up, there are six holes in line — five holes with 0.072-inch diameters and one hole with a 0.086-inch diameter.

To Check
Position one end of spring to lower notch of arm w/bushing. Operate the typing unit under power and perforate an alternate R and "hyphen" code combination in approximately 8 inches of tape. Tear the 8-inch length of punched tape from the tape punch and place it to the smooth side of TP156011 gauge. Concentrically align a no. 2 code hole of the punched tape with the first 0.072-inch diameter hole of TP156011 gauge.

(1) Requirement
The four remaining 0.072-inch diameter gauge holes should be visible through corresponding no. 2 code holes in the punched tape.

(2) Requirement
The no. 2 code hole which corresponds with the 0.086-inch diameter gauge hole should lie entirely within the perimeter of that gauge hole.

To Adjust
Position spring up arm w/bushing, notch by notch, until requirement is met.
2.09 Tape Punch Area (continued)

TAPE BIAS SPRING

Requirement
With tape removed from the tape punch, tape bias spring should rest against side of
die plate and should be symmetrical about the tape opening, as gauged by eye.

To Adjust
Loosen tape bias spring screw and
position tape bias spring so that it
just rests against the left side of
clearance slot and is symmetrical
about the tape opening. Tighten screw.

CHAD CHUTE EXTENSION

Requirement
With bracket in a vertical position, as
gauged by eye, the extension should clear
all moving parts and should have no kinks
along its length.

To Adjust
Loosen screw and position bracket to
meet requirement. Tighten screw.
CODEBAR EXTENSION SPRINGS

Requirement
With the typing unit in stop condition
Min 3/4 oz --- Max 1-1/4 oz
to pull spring to its installed length.

(SENSING LEVER SPRINGS

Requirement
With the tape punch in off position
Min 15 grams --- Max 32 grams
to start sensing lever moving.
2.11 Tape Punch Area (continued)

**PAWL AND LEVER SPRINGS**

Requirement
With the tape punch "off"

Upper spring
Min 1 oz---Max 2 oz

Lower spring
Min 1-1/2 oz---Max 2-1/2 oz
to start pawl moving.

**STRIPPER BAIL SPRING**

Requirement
With the tape punch in off position
Min 12 oz---Max 15 oz
to pull spring to its installed length.

**STRIPPER BAIL SPRING**

Requirement
With tape punch in off position
Min 7 oz---Max 13 oz
to start the stripper bail moving.

(Left Side Views)
2.12 Tape Punch Area (continued)

**FEED PAWL SPRING**

Requirement
With tape punch in off position
Min 1/2 oz --- Max 1 oz

To start feed pawl moving.

(Left Side View)

**DETENT LEVER SPRING**

Requirement
With the tape punch "off"
Min 13 oz --- Max 17 oz

To start detent lever moving.

(Left Side View)
2.13 Tape Punch Area (continued)

**BACKSPACE LEVER SPRING**

Requirement
With the tape punch in off position
-Min 3/4 oz---Max 1 1/2 oz
to pull spring to its installed length.

![Diagram of Backspace Lever Spring]

**TAPE GUIDE TENSION SPRING**

Requirement
Min 34 oz---Max 38 oz
to pull spring to its installed
(upper notch) length.

![Diagram of Tape Guide Tension Spring]
2.14 Tape Punch Area (continued)

**TAPE GUIDE COMPRESSION SPRING**

Requirement
- Remove the tape guide tension spring. Place roller slightly above the feed wheel.
- Min 24 oz—Max 48 oz to start tape guide moving.

(Front View)

**CONTROL DETENT LEVER SPRING**

Note: This adjustment applies only to tape punches equipped with TP182843 detent lever.

Requirement
- With the tape punch "off"
- Min 10-1/2 oz—Max 14-1/2 oz to start detent lever moving.

(Left Side View)

**CONTROL PUSHBUTTONS**

Requirement
- Min 1/2 oz—Max 1-1/2 oz
to push each control pushbutton down 1/8 inch as gauged by eye, while remaining control pushbuttons remain in their normal upward positions.

(Left Side View)
2.15 Tape Punch Area (continued)

**DRIVE LINK SPRING**

Requirement
With tape punch "off"
Min 7 oz---Max 9 oz
to start drive link moving.

![Diagram of DRIVE LINK SPRING](image)

**PUNCH BLOCK ASSEMBLY**

To Check
Remove the punch block assembly from the tape punch. Replace after performing this adjustment. (For instructions, see the appropriate tape punch section.)

![Diagram of PUNCH BLOCK ASSEMBLY](image)

**Requirement**
With the punch pin slots facing the guide pin
Min some---Max 4 oz
to start feed punch pin and each code punch pin moving.

**Note:** The above requirement must be met anywhere along each punch pin's upward and downward travel in holder.
3. VARIATIONS TO THE BASIC UNIT

3.01 Automatic Control Mechanisms

CONTROL BAIL ASSEMBLY

To Check
With the typing unit in the stop condition and the tape punch "on," gently oscillate the control bail assembly from its clockwise position to its counterclockwise position and back again. Repeat this oscillating motion several times while noting requirements.

1. Requirement
   The control bail assembly should be free from binds along its normal travel.

2. Requirement
   When released from its counterclockwise position, the control bail assembly should return to its clockwise position under spring tension.

To Adjust

Note: Parts should not be bent, other than specifically directed.

Remove the latch bail spring, control bail spring (not illustrated), and left mounting screw which secures the left side of TP182388 post. The TP182388 post threaded hole should be concentric to the left mounting screw hole. If necessary, bend TP182388 post about its right mounting screw (not illustrated). Reassemble left mounting screw and tighten. Replace springs. Recheck requirements and refine adjustment if necessary.
LEVER OVERTRAVEL

To Check
With the tape punch "on," set up the TAPE (--3-5--) code combination in the selector. Manually rotate the main shaft until the function rocker shaft is in its most forward position.

Requirement
Min 0.005 inch --- Max 0.015 inch
between the TP182384 lever and latch bail.

To Adjust
Loosen screws and position latch bail using pry points. Tighten screws.
3.03 Automatic Control Mechanisms (continued)

LATCH BAIL SPRING

Requirement
With the tape punch "off"
Min 2 oz --- Max 4 oz
to pull spring to installed length.

FEED WHEEL RATCHET

FEED PAWL

TP182386 LEVER

(Left Side View)

TP182384 LEVER

Screw

PRY POINTS

PRY POINTS

SPRING

LATCH BAIL

(Left Side View)

FEED WHEEL RATCHET AND PAWL GAP

(1) To Check
With the tape punch "off," manually rotate the main shaft until the function rocker shaft positions the feed pawl so that there is a minimum clearance between it and a tooth of the feed wheel ratchet.

Requirement
Min 0.015 inch --- Max 0.030 inch
between the feed pawl and a tooth of the feed wheel ratchet.

To Adjust
Loosen the screw and position the TP182386 lever using the pry points.
Tighten screw.

(2) To Check
With the tape punch "on," manually rotate the main shaft until the function rocker shaft positions the feed pawl so that it engages a tooth of the feed wheel ratchet.

Requirement
The feed pawl should fully engage a tooth of the feed wheel ratchet.

To Adjust
Refine requirement under (1) To Check.
SENSEING LEVER AND BAIL GAP

Note: This adjustment applies only to tape punches equipped with the sense suppression option — TP182430 bail etc.

To Check
Place the tape punch "off."

Requirement
The sensing lever associated with the leftmost code level (Figure 2) should be
- Min 0.010 inch underflush
- Max 0.010 inch overflush
with the bail.

To Adjust
Loosen screws and position bail using pry points. Tighten screws.

(Left Side View)
3.05 Automatic Control Mechanisms (continued)

**LATCH BAIL GAP**

*Note:* This adjustment applies only to tape punches equipped with tape punch interlock mechanism.

To Check
Place the typing unit in the *stop condition* and the tape punch "off."
Place the nonprint codebar in its operated position (solenoid energized).

**Requirement**
- Min 0.015 inch --- Max 0.030 inch between the latch bail and TP182384 lever.

To Adjust
Remove punch interlock spring. Loosen clampscrew and position lever using pry points. Tighten screw and replace spring.

(Left Side View)
3.06 Automatic Control Mechanisms (continued)

**VISUAL "ON OFF" INDICATOR**

Note: This adjustment applies only to tape punches equipped with the visual ON OFF indicator option.

**To Check**

With the tape punch cover in place over the tape punch, place the tape punch "off." Note the gap between the rear edge of the cover opening and the rear edge of the indicator arm. Place the tape punch "on." Note the gap between the front edge of the cover opening and the front edge of the indicator arm.

**Requirement**

- The gaps should be equal, as gauged by eye.

**To Adjust**

With the tape punch lid removed from the tape punch cover, loosen screw post and position indicator arm. Tighten screw post.

---

**CONTROL BAIL ASSEMBLY SPRING**

Note: This adjustment applies only to tape punches equipped with the visual ON OFF indicator option.

**Requirement**

- With tape punch "off"
- Min 2 oz — Max 3 oz
- to pull spring to installed length.

(Left Side View)
3.07 Automatic Control Mechanisms (continued)

**CONTROL BAIL ASSEMBLY SPRING**

Note: This adjustment applies only to tape punches which are not equipped with visual ON OFF indicator option.

Requirement
With the tape punch "off"
- Min 2-1/2 oz --- Max 3-1/4 oz
  to pull the spring to installed length.

"LOCK ON"

Note: This adjustment applies only to tape punches equipped with the LOCK ON option — TP184200 lock bail, etc.

To Check
Place the tape punch in the "off" condition. Depress the LOCK ON pushbutton and allow the TP184200 lock bail to latch the TP182466 lever.

Requirement
- Min 0.050 inch --- Max 0.070 inch
  between the latch bail and TP182384 lever.

To Adjust
Loosen clampscrew and position the bracket. Tighten clampscrew.
AUTOMATIC "ON"

Note: This adjustment applies only to tape punches equipped with the LOCK ON option.

To Check
With the tape punch "on," depress the UNLOCK pushbutton. Set up the TAPE (-2--5--) code combination in the selector. Manually rotate the main shaft until the drive link is in its most forward position.

Requirement
Min 0.010 inch---Max 0.025 inch
between the latch bail and TP182384 lever.

To Adjust
Loosen clamp nut and rotate eccentric post.
Tighten clamp nut.
3.09 Automatic Control Mechanisms (continued)

"ON" MECHANISM RETURN SPRING

Requirement
With the tape punch "off"
Min 1/2 oz --- Max 2-1/2 oz
to pull spring to installed length.

AUTOMATIC PUNCH INTERLOCK SPRING

Note: This adjustment applies only to tape punches equipped with the interlock mechanism.

Requirement
With nonprint codebar in its operated position (solenoid energized)
Min 4 oz --- Max 6 oz
to pull spring to installed length.
3.10 Miscellaneous

FOLDED TAPE GUIDE

(1) Requirement

With no tape in the punch, the bracket should be flush to the top surface of the punch block casting.

To Adjust

Loosen screw and position bracket. Tighten screw.

Note 1: This adjustment applies only to tape punches equipped with TP185705 folded tape guide modification kit.

(2) Requirement

With tape in punch

Min some — Max 0.015 inch between the tape depressor tab and underside of the chad chute.

To Adjust

Bend tape depressor tab to meet requirement.

Note 2: Check TEN CHARACTERS PER INCH requirement and refine if necessary.
2.05 Tape Punch Area

CONTROL PUSHBUTTONS

Requirement
Min 1/2 oz---Max 1-1/2 oz
to push each control pushbutton
down 1/8 inch
as gauged by eye, while
remaining control pushbuttons
remain in their normal upward
positions.

VISUAL "ON-OFF" INDICATOR

Note: This adjustment applies only to tape punches equipped with the automatic control
visual ON-OFF indicator option.

To Check
With the tape punch cover in place over
the tape punch, place the tape punch
"off." Note the gap between the rear
dege of the cover opening and the rear
dege of the indicator arm. Place the
tape punch "on." Note the gap between
the front edge of the cover opening and
the front edge of the indicator arm.

To Adjust
The gaps should be equal, as gauged by
eye.

With the tape punch lid removed from the
tape punch cover, loosen screw post and
position indicator arm. Tighten screw post.
