In 1931, soon after A. T. & T. had bought the Teletype Corporation and made it part of Western Electric, Edward E. Kleinschmidt left Teletype Corp. and founded Kleinschmidt Laboratories, Inc., where he continued to do consulting work for Teletype Corp. for a few years.

During WWII, the US Signal Corps realized the importance of teletypewriter communications, but needed something more “tactical” and lighter weight than the Teletype Corp. Model 15. Edward E. Kleinschmidt came out of retirement, resurrected Kleinschmidt Laboratories and produced a new, tactical, teletypewriter. In 1949, Kleinschmidt Laboratories Inc. was awarded the contract for the TT-4 teletypewriter and KLI became the primary supplier of teletypewriters to the US Army & Air Force for the next 30 years.

Although KLI had a large amount of sales to the military, they did not want to be tied only to military sales, so they offered civilian versions of some of their military products. They apparently did not do too well in the commercial market, since you don't see many of these civilian versions today. (The AWA Museum does have a commercial Kleinschmidt Model 112B Typing Reperforator, which is similar to the military TT-345.)

The following letter was sent out explaining the commercial models available in 1953. Note that the company name is just “Kleinschmidt, Inc”. This may have been a separate division for commercial sales. The letter includes actual photographs of the commercial product lines, except that there is no photo of the Model 150 page printer. Instead, a photo of the Model 120 reperforator is erroneously in its place.

Equivalence between commercial & military model numbers:

Document Corporation

I would like to apologize for the delay in answering your letter of November 9th. As requested, we are pleased to enclose herewith photographs, specification sheets and price lists covering the following equipments:

Model 116 - Kleinschmidt Receiving Only Reperforator
Model 120 - Kleinschmidt Reperforator & Tape Transmitter
Model 140 - Kleinschmidt Tape Distributor
Model 150 - Kleinschmidt Teleprinter
Model 155 - Kleinschmidt Teleprinter

Kleinschmidt Teleprinters have been designed for ease of maintenance. The equipment consists of seven major sub-assemblies which can be removed without affecting the adjustments. The equipment is compact, light in weight and designed for continuous operation at 100 wpm or 600 opm. Kleinschmidt Teleprinters are compatible with other existing equipments for operation at 60, 66, 75 or 100 wpm.

The enclosures briefly describe the various characteristics of our equipment, however, in order to acquaint you more fully we would appreciate the opportunity of demonstrating the units to you at your convenience.
We are currently in the process of establishing representation in your area and will arrange for a representative to call on you shortly. In the meantime, if there is any additional information required, it will be supplied at your request.

Yours very truly,

KLEINSCHMIDT, INC.

E. E. Mead
Vice President
