

28 ELECTRICAL SERVICE UNIT

LUBRICATION

1. GENERAL

1.01 This section provides the lubrication information for the maintenance of 28 electrical service units. This information, together with that contained in the general lubrication section, gives the complete information for lubricating the unit.

1.02 Any mechanism on an electrical service unit which requires lubrication should be lubricated before being placed in service as specified in the section covering the preparation of teletypewriter apparatus for installation. After a few weeks in service, it should ordinarily be relubricated to make certain that all the specified points have received lubrication. Thereafter, because of the varying conditions at each station, the mechanism should be lubricated as often as specified by local instructions.
