### INTRODUCTION

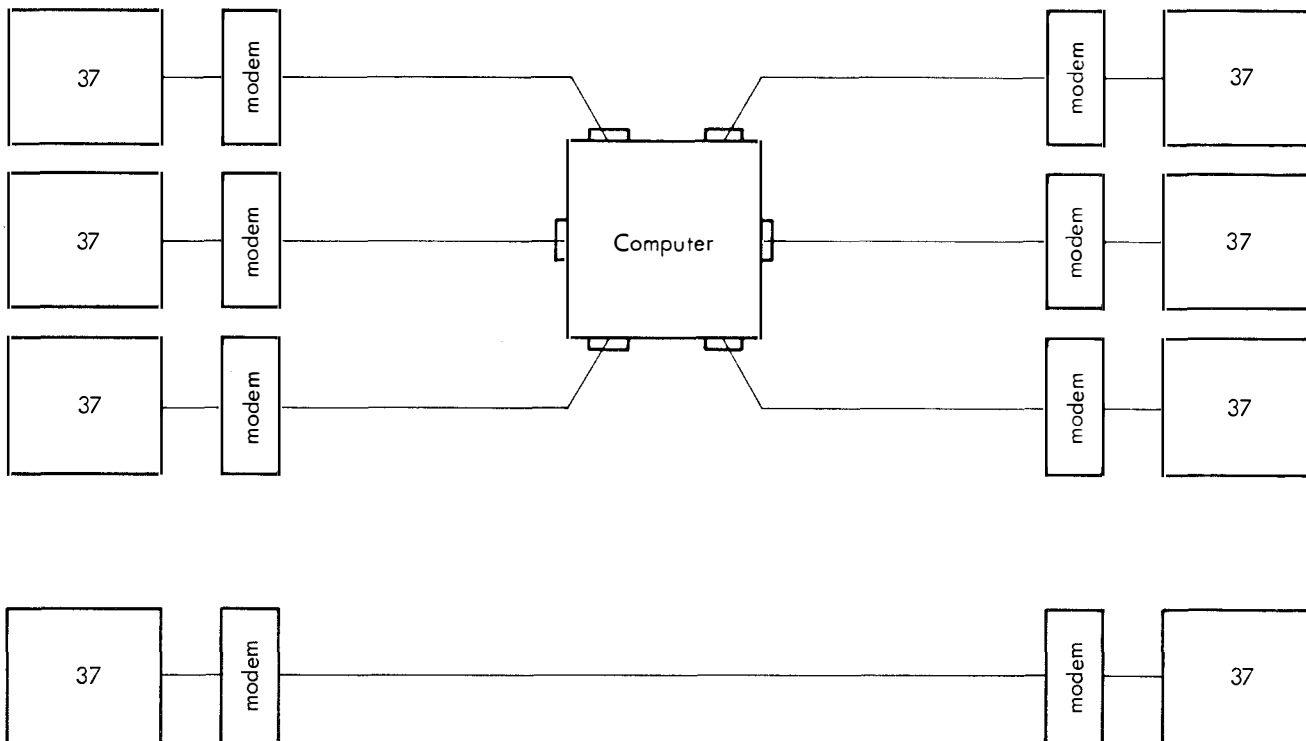

This catalog supplement provides ordering information for terminal configurations and options not presently in the Teletype Model 37 Product Catalog.

The features and specifications for the terminal configurations described in this catalog supplement are to be assumed to be the same as those in the catalog unless stated otherwise.

# TERMINALS FOR POINT-TO-POINT PRIVATE LINE APPLICATIONS

## Configurations

37 terminals are available for private line point-to-point communications systems. Typical system configurations are illustrated below.

## Controls And Indicators

### Arrangement ASR

ORIG	SEND	RECEIVE	CLEAR	INTRPT		PAPER ADVANCE	READER AUTO	PUNCH ON	PUNCH LOCAL	READER LOCAL	PRINTER LOCAL	KBD LOCAL	LOCAL RETURN	CARRIER FAIL	OUT OF SERVICE	ERROR		PAPER ALARM	EOL
------	------	---------	-------	--------	--	---------------	-------------	----------	-------------	--------------	---------------	-----------	--------------	--------------	----------------	-------	--	-------------	-----

### Arrangement KSR

ORIG	SEND	RECEIVE	CLEAR	INTRPT	OFF LINE	PAPER ADVANCE
------	------	---------	-------	--------	----------	---------------

LOCAL RETURN	CARRIER FAIL	OUT OF SERVICE	ERROR		PAPER ALARM	EOL
--------------	--------------	----------------	-------	--	-------------	-----

### Arrangement RO

PAPER ADVANCE	OFF LINE	RECEIVE	OUT OF SERVICE	CARRIER FAIL	ALARM	INTRPT	LOCAL RETURN
---------------	----------	---------	----------------	--------------	-------	--------	--------------

### Arrangement ASR (cont'd)

TAPE ALARM	READER STEP			PUNCH BACK SPACE	
------------	-------------	--	--	------------------	--

(punch-reader panel)

**ORIG (Originate) pushbutton (not on RO's).**  
Generates ENQ (able to receive enquiry) to initiate communications with remote device.

**SEND indicator (not on RO's).**  
Indicates that terminal may begin sending to remote device; as a result of having received an ACK (able to receive) response to an ENQ (able to receive enquiry) generated via ORIG pushbutton; or optionally as a result of having received an EOT (End of Transmission) at the end of a transmission from the remote device.

**RECEIVE indicator.**  
Indicates that terminal is able to receive from remote device; as a result of having responded ACK (able to receive) to a received ENQ (able to receive enquiry), or optionally as a result of having sent EOT (End Of Transmission) at the end of a transmission to the remote device.

**CLEAR pushbutton (not on RO's).**  
Generates DLE EOT (end of communications) sequence, to disconnect terminal from remote device when neither has additional data to send.

**INTRPT (Interrupt) pushbutton.**  
Generates timed break to halt transmission coming from the remote device when an abnormal condition occurs at the terminal. Can be generated by remote device to ring indicator bell on terminal when it fails to respond to ENQ (able to receive enquiry).

**CARRIER FAIL indicator.**  
Indicates loss of communications channel carrier; which prevents communications.

**OUT OF SERVICE pushbutton and indicator.**  
Pushbutton operation prevents terminal from responding to ENQ (able to receive enquiry). Used during paper loading and similar activities. Momentary indicator operation accompanied by single ring of bell indicates that terminal has received a NAK (not able to receive) response to the ENQ (able to receive enquiry) it generated.

**ERROR indicator (not on RO's).**  
Indicates that a character or control with incorrect vertical parity has been received.

**PAPER ALARM indicator (not on RO's).**  
Indicates that printer paper supply needs refilling. Terminal cannot generate or respond to an ENQ (able to receive enquiry) until paper supply is refilled and the indicator is reset.

**ALARM indicator (on RO's only).**  
Is combination of PAPER ALARM plus ERROR indicators, described above.

**EOL (End Of Line) indicator (not on RO's).**  
Indicates that sufficient characters have been generated from the keyboard to fill one printing line since the last CR (Carriage Return) was generated, or that the printer has reached the end of its printing line, whichever came first.

**OFF LINE pushbutton (not on ASR's).**  
Depressed and lit, the terminal is in the off-line (local) mode, for practice typing. Depressed and not lit, the terminal is in the on-line mode, for communications.

**KBD (Keyboard) LOCAL, PRINTER LOCAL, READER LOCAL, and PUNCH LOCAL pushbuttons (on ASR's only).**  
Depressed and lit, the keyboard, printer, reader, and punch portions of the terminal, respectively, are in the off-line (local) mode, for preparing a tape for transmission or practice typing. Depressed and not lit, these components are in the on-line mode, for communications.

**PUNCH ON pushbutton (on ASR's only).**  
Depressed and lit, the terminal punch is on. Depressed and not lit, the punch is off.

**READER AUTO pushbutton (on certain ASR's only).**  
Depressed and lit, the terminal is permitted to respond to ASCII controls DC1 and DC3, and turn the tape reader on and off, respectively. Depressed and not lit prevents response.

**RUN-STOP-FREE lever (on ASR's only, on the tape reader).**  
RUN starts reader. STOP and FREE both stop reader. FREE also permits the tape to be pulled through the reader, in either direction.

**PAPER ADVANCE pushbutton.**  
Feeds paper out of printer as long as the pushbutton is held.

**LOCAL RETURN pushbutton.**  
Returns printer printing head to left-hand margin.

**BELL indicator.**  
Rings on receipt of ASCII control BEL; also in connection with other indicators described above.

**TAPE ALARM indicator (on ASR's only).**  
Indicates that tape supply needs refilling, that tape going into reader is too taut, or that reader has reached the end of its tape.

**PUNCH BACK SPACE (on ASR's only).**  
Feeds tape in reverse, one punching interval.

**READER STEP pushbutton (on ASR's only).**  
Reads next character on tape in reader each time the pushbutton is depressed.

### 37-103

## Receive-Only Terminals (RO) for Point-to-Point Private Line Applications Selection Guide

Print - Out										Control Panel Arrangement	Catalog Number
Type of Feed	Platen Width (inches)	Horizontal Tabulation <sup>+</sup>	Horizontal Tab Stop Set and Clear <sup>+</sup>	Vertical Tabulation <sup>+</sup>	Vertical Tab Stop Set and Clear <sup>+</sup>	Form Feed <sup>+</sup>	Full and Half Forward <sup>+</sup> and Reverse Line Feed <sup>+</sup>	Expandable Character Set <sup>+</sup>	Two-Color Printing <sup>+</sup>		
Friction	8-1/2	●	●							RO	37-103-1A
	8-1/2	●	●	●	●	●	●	●	●		37-103-3A
	8-1/2										37-103-5A ‡

	9-1/2	●	●	●	●	●	●	●	●		37-103-4A

<sup>+</sup> Controlled by the generation or receipt of an ASCII character, control, or sequence  
<sup>‡</sup> Narrow table terminal

#### MAIN CHARACTERISTICS (RO)

Follows line control procedures for ASCII code specified in ANSI X3.28-1971 sub. 2.3/A1.

#### Serial Signal Input

15 char/sec @ 10 bit/char

Terminal tolerates up to 40% received telegraphic distortion

#### ASCII '68 Code

#### EIA (RS-232-B) Interface

Generates and Detects Even Vertical Parity

#### Power:

115vac @ 60Hz, 150W, 15 amp fused

#### Finish:

Two-tone; charcoal gray paint on sheet metal parts, ivory color impregnated in plastic covers and laminated table tops.

#### Controls:

Interrupt, Out Of Service, Off-Line, Paper Advance, and Local Return.

#### Indicators:

Receive, Carrier Fail, Alarm, and Bell.

#### Print-Out:

94 ASCII Character Set in 6-Row Typebox

#### Adjustable Margins

Printing Spacing is 10 char/in horizontal, 6 lines/in vertical; operator adjustable to 3 lines/in on terminals not equipped with half line feeding.

Space, Backspace, and Return Format Controls, standard. Horizontal and Vertical Tabulation, Tab Stop Setting and Clearing, Full and Half Forward and Reverse Line Feed, and Form Feed Format Controls, optional. All format controls are controlled by generation or receipt of ASCII characters, controls, or sequences.

#### Operator Adjustable Printing Impact

Automatic Non-Print of ASCII controls

#### Copy Lights

•		9-1/2	•	•	•	•	•	•	•	•		37-203-4A

<sup>+</sup>Controlled by the generation or receipt of an ASCII character, control      \*Via maintenance man adjustment.  
<sup>‡</sup>Narrow Table terminal

### MAIN CHARACTERISTICS (KSR)

#### General:

Follows line control procedures for ASCII code specified in ANSI X3.28-1971 sub. 2.3/A1.

#### Serial Signal Input & Output

15 char/sec @ 10 bit/char

Terminal tolerates up to 40% received telegraphic distortion

#### ASCII '68 Code

#### EIA (RS-232-B) Interface

Generates and Detects Even Vertical Parity

#### Power:

115vac @ 60Hz, 150W, 15 amp fused

#### Finish:

Two-tone; charcoal gray paint on sheet metal parts, ivory color impregnated in plastic covers and laminated table tops.

#### Keyboard Entry:

Generates all 128 ASCII Characters and Controls

4-Row Typewriter Format, Color Coded to Distinguish Between Characters and Controls.

All keys repeatable, 10 factory programmed

#### Controls:

Originate, Clear, Interrupt, Out Of Service, Off-Line, Paper Advance, and Local Return.

#### Indicators:

Send, Receive, Carrier Fail, Error Paper Alarm, End Of Line, and Bell Indicator.

#### Print-Out:

94 ASCII Character Set in 6-Row Typebox

#### Adjustable Margins

Printing Spacing is 10 char/in horizontal, 6 lines/in vertical; operator adjustable to 3 lines/in on terminals not equipped with half line feeding.

Space, Backspace, and Return Format Controls, standard. Horizontal and Vertical Tabulation, Tab Stop Setting and Clearing, Full and Half Forward and Reverse Line Feed, and Form Feed Format Controls, optional. All format controls are controlled by generation or receipt of ASCII characters, controls, or sequences.

# TERMINALS FOR MULTI-POINT PRIVATE LINE APPLICATIONS

## Configurations

37 terminals are available for private line multi-point communications systems. Typical system configurations are illustrated below.

Store-and-Forward, Full-Duplex (Simultaneous Send-Receive)

Store-and-Forward, Half-Duplex (Alternate Send-Receive)  
or Terminal-to-Terminal

## Controls and Indicators

### Arrangement ASR

SINGLE BID	REPEAT BID			SEND	RECEIVE	PAPER ADVANCE	PUNCH ON	PUNCH LOCAL	READER LOCAL	PRINTER LOCAL	KBD LOCAL		LOCAL RETURN	BUZZER OFF	ERROR	SEND ALARM	OUT OF SERVICE	PAPER OUT	EOL
------------	------------	--	--	------	---------	---------------	----------	-------------	--------------	---------------	-----------	--	--------------	------------	-------	------------	----------------	-----------	-----

### Arrangement RO

PAPER ADVANCE	OFF LINE	RECEIVE	BUZZER OFF	ERROR	OUT OF SERVICE	PAPER OUT	LOCAL RETURN
---------------	----------	---------	------------	-------	----------------	-----------	--------------

### Arrangement ASR (cont'd)

TAPE ALARM	READER STEP				PUNCH BACK SPACE
------------	-------------	--	--	--	------------------

### Arrangement ROTR

TAPE FEED	BUZZER OFF	TAPE ALARM	RECEIVE	ERROR	OUT OF SERVICE
-----------	------------	------------	---------	-------	----------------

SINGLE BID and REPEAT BID pushbuttons (not on RO's or ROTR's). Condition the associated terminal controller to permit transmission from the terminal when next polled by receipt of its TSC (Transmitter Start Code) character sequence. Single Bid conditions the controller to permit a single transmission to be sent, and to thereafter give a no data to send response when polled by its TSC. Repeat Bid conditions the controller to permit a transmission each time it is polled by receipt of its TSC.

SEND indicator (not on RO's or ROTR's). Comes on after the associated terminal controller is polled by receipt of its TSC (Transmitter Start Code) character sequence. Remains on if the Single or Repeat Bid pushbutton was depressed to indicate that the terminal may begin sending.

RECEIVE indicator. Comes on when the associated terminal controller is addressed by receipt of its CDC (Call Directing Code) character sequence. Remains on if the terminal controller gives an able to receive response to the CDC.

BUZZER OFF pushbutton. Silences the buzzer, which sounds whenever the associated terminal controller sends or receives a not able to receive response and whenever a send alarm is received from the system communications controller.

ERROR indicator. Indicates that a character or control with incorrect vertical parity has been received.

SEND ALARM indicator (not on RO's or ROTR's). Indicates receipt of a send alarm from the system communications controller.

OUT OF SERVICE pushbutton. Causes the associated terminal controller to give no data to send response when polled by receipt of its TSC (Transmitter Start Code) character sequence, and to give a not able to receive response when addressed by receipt of its CDC (Call Directing Code) character sequence. Used during paper loading and similar activities.

PAPER OUT indicator (not on ROTR's). Indicates that printer paper supply needs refilling. Causes same effect as operation of the Out Of Service pushbutton until the paper supply is refilled and the alarm is reset.

EOL (End of Line) indicator (not on RO's or ROTR's). Indicates that sufficient characters have been generated from the keyboard to fill one printing line since the last CR (Carriage Return) was generated, or that the printer has reached the end of its printing line, whichever came first.

OFF LINE pushbutton (not on ASR's or ROTR's). Depressed and lit, the terminal is in the off-line (local) mode, for practice typing. Depressed and not lit, the terminal is in the on-line mode, for communications.

KBD (Keyboard) LOCAL, PRINTER LOCAL, READER LOCAL, and PUNCH LOCAL pushbuttons (on ASR's only). Depressed and lit, the keyboard, printer, reader, and punch portions of the terminal, respectively, are in the off-line (local) mode, for preparing a tape for transmission or practice typing. Depressed and not lit, these components are in the on-line mode, for communications.

PUNCH ON pushbutton (on ASR's only). Depressed and lit, the punch portion of the terminal is on. Depressed and not lit, the punch is off.

READER AUTO pushbutton (on ASR's only). Depressed and lit, the terminal is permitted to respond to DC1 and DC3, and turn the tape reader on and off, respectively. Depressed and not lit prevents response.

RUN-STOP-FREE lever (on ASR's only, on the tape reader). RUN starts the reader. STOP and FREE both stop the reader. FREE also permits the tape to be pulled through the reader, in either direction.

PAPER ADVANCE pushbutton (not on ROTR). Feeds paper out of printer as long as the pushbutton is held.

LOCAL RETURN pushbutton (not on ROTR's). Returns printer printing head to left-hand margin.

Bell indicator (not on ROTR's). Rings on receipt of ASCII control BEL; also in connection with other indicators described above.

TAPE ALARM indicator (on ASR's and ROTR's only). Indicates that tape supply needs refilling; on ASR's, that tape going into reader is too taut, or that reader has reached the end of its tape.

PUNCH BACK SPACE (on ASR's only). Feeds tape in reverse, one punching interval.

READER STEP pushbutton (on ASR's only). Reads next character on tape in reader each time the pushbutton is depressed.

TAPE FEED (on ROTR's only). Feeds out an adjustable length of tape punched with ASCII character DEL. Feed-out is stopped if data reception begins.

### 37-104

## Receive-Only Terminals (RO) for Multi-Point Private Line Applications Selection Guide

Print - Out										Control Panel Arrangement	Catalog Number

\*Via maintenance man adjustment.

**MAIN CHARACTERISTICS (ASR)**

**General:**

Follow line control procedures for ASCII specified in ANSI X3.28-1971 sub. 2.4/A1 - 2.6/A1.

**Serial Signal Input & Output**

15 char/sec @ 10 bit/char

Terminal tolerates up to 40% received telegraphic distortion

ASCII '68 Code

EIA (RS-232-B) Interface

Generates and Detects Even Vertical Parity

**Power:**

115vac @ 60Hz, 300W, 15 amp fused

**Finish:**

Two-Tone; Charcoal graypaint on sheet metal parts, ivory color impregnated in plastic covers and laminated table tops.

**Controls:**

Single and Repeat Bid, Buzzer Off, Out Of Service, Keyboard Local, Printer Local, Reader Local, Punch Local, Punch On, Run-Stop-Free, Reader Auto, Paper Advance, Local Return, Punch Backspace, and Reader Step.

**Indicators:**

Send, Receive, Error, Send Alarm, Paper Out, End Of Line, Bell, Tape Alarm, and Buzzer.

**Keyboard Entry:**

Generates all 128 ASCII characters and controls.

4-Row Typewriter Format, Color coded to Distinguish between characters and controls on the same key.

All keys can be repeatable, 10 are factory programmed.

**Print-Out:**

94 ASCII Character Set in 6-Row Typebox

Adjustable Margins

Printing is 10 char/in horizontal, 6 lines/in vertical; operator adjustable to 3 lines/in on terminals not equipped with half line feeding.

Space, Backspace, and Return format controls, standard. Horizontal and Vertical Tabulation, Tab Stop Setting, and Clearing, Full and Half Forward and Reverse Line Feed, and Form Feed Format Controls, Optional. All format controls are controlled by generation or receipt of ASCII characters, controls, or sequences.

Operator Adjustable Printing Impact

Automatic Non-Print of ASCII Controls

Copy Lights

**Tape Print-Out:**

All Characters Punched into Tape are also printed on the tape, between the feed holes, 6 punching intervals behind the punched character.

Automatic Non-Print of ASCII Controls

**Tape:**

Oil Impregnated Paper Tape; punched in accordance with USAS X3.18.1967 for 1 inch wide paper tape.

# 37-525 Printing Punch Terminals (ROTR) for Multi-Point Private Line Applications

Catalog Number: 37-525-1A

## MAIN CHARACTERISTICS (ROTR)

### General:

Follows line control procedures for use with ASCII code specified in ANSI X.38-1971 sub. 2.4/A1 and 2.6/A1.

### Serial Signal Input

15 char/sec @ 10 bit/char

Terminal tolerates up to 40% received telegraphic distortion

ASCII '68 Code

EIA (RS-232-B) Interface

Detects Even Vertical Parity

### Power:

115vac @ 60Hz, 150W, 15 amp fused

### Finish:

Charcoal gray paint finish

### Controls:

Buzzer Off, Out Of Service, Tape Feed

### Indicators:

Receive, Error, Tape Alarm, and Buzzer

### Tape Print-Out:

All characters punched into tape are also printed on the tape, between the feed holes, 6 punching intervals behind the punched character.

Automatic Non-Print of ASCII controls

### Tape:

Oil impregnated paper tape; punched in accordance with USAS X3.18.1967 for 1 inch wide paper tape.

Automatic Tape Feedout of adjustable length of DEL punched tape when data reception ceases. Stopped if data reception begins.

... for OPTIONS AND ACCESSORIES, see Page 13

# DIMENSIONS AND WEIGHTS

## OPTIONS AND ACCESSORIES

### Keyboard

#### 334956 Keyboard Visual Aid

Useful on terminals equipped with expandable character set feature.

Guides keyboard operator to the proper keys when sending to and from a 37 terminal in the printing vocabulary shift-out condition.

Consists of a matte finish polyester film insert in a magnetic base metal holder. Insert is black with white squares denoting keytop locations. Characters affected by the shift-out condition are marked in black in the appropriate squares, with room left to write in the characters that will be printed in the shift-out condition. Can be marked in pencil or in ink.

#### 337900 Copy Holder

Holds information to be copied by the keyboard operator. Adjustable horizontally and vertically. Mounts anywhere on terminal table edge.

### Print-Out

<u>Typeboxes</u>	<u>10 char/in</u>
7-row	334238
8-row	334239

For terminals equipped with expandable character set feature.

Bottom 6 rows are filled with the standard ASCII characters typepallets. Room in the top row(s) for 16 (32) typepallets for the desired shift-out characters.

#### Typepallets

For a complete listing of typepallets for special characters write for Teletype Bulletin 570-020-800TC.

### Tape Print-Out Option

To order an ASR terminal equipped with a printing tape punch instead of a non-printing tape punch, add the suffix P to the terminal catalog number.

## 9100 STATION CONTROLLERS

For Multi-Point Private Line Terminals. Provide TSC (Transmitter Start Code) and CDC (Call Directing Code) recognition and response functions, and terminal control in connection with the control panel on the associated multi-point private line terminal. Follows ANSI X3.28-1971 sub. 2.4/A1 and 2.6/A1.

Write for 9100 Station Controller Catalog.

### Paper and Tape Handlers

	Standard Platen
<u>Front Form Supplier</u>	<u>326916</u>
<u>Rear Form Supplier</u>	<u>328284</u>
<u>Form Accumulator</u>	<u>330697</u>

Front Form Supplier holds box of fanfolded forms and guides them up to printer. Handles forms 5-1/2 to 11 inches in length; 3-5/8 to 9-1/2 inches in width. Fits inside terminal pedestal.

Rear Form Supplier holds box of fanfolded forms and guides them up to printer. Handles forms 5-1/2 to 11 inches in length; 3-5/8 to 9-1/2 inches in width. Adds 6 inches to depth of terminal.

Form Accumulator accumulates forms leaving printer. Handles forms 5-1/2 to 11 inches in length; 3-5/8 to 9-1/2 inches in width. Adds 6 inches to depth of terminal.

#### 326970 Tape Bin

Stores up to 50 ft of punched tape between the tape punch and the tape reader. Fits inside the terminal behind the tape module door.

#### 326955 Tape Winder Door

Winds up to 1000 ft of tape as it comes from the tape reader. Replaces standard blank door on tape module.

#### 326960 Tape Winder plus Winder-Unwinder Door

Unwinds tape to tape reader, winds up tape coming from tape reader. Rewinds tape. Both reels handle up to 1000 ft. Replaces standard blank door on tape module.

### Modification Kits
